The Production and Marketing of Flue-Cured Tobacco in Argentina 17

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

U.S. unmanufactured tobacco exports were strong in November 1984, with 44,654 tons valued at $267 million exported. This was an 11-percent increase from November 1983. Japan, Egypt and West Germany were the leading markets. Flue-cured tobacco accounted for 74 percent of November exports. For the January-November period, exports were about the same level as a year ago, with 221,011 tons valued at $1.3 billion exported.

U.S. unmanufactured imports for consumption for November 1984 were 17,929 tons valued at $54 million, near November 1983 levels. Cumulative imports for January-November 1984 were 176,703 tons valued at $523 million, down 23 percent from January-November 1983.

World tobacco highlights include:

-China established a new trade corporation for tobacco.
-Japan's cigarette sales were down 1 percent for January-October 1984.
-Jordan allowed the importation of cigarettes.
-Taiwan imports of leaf tobacco recovered in 1984.
-Brazil's tobacco producer prices were set.
-Canada's Parliament passed legislation to form National Tobacco Marketing Agency.
-EC Commission extended the deadline for tobacco export subsidies.
-Korea lowered leaf export prices by 5 percent.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

In China, beginning January 1, 1985, all tobacco-related import and export business will be conducted by China Tobacco Import and Export Corporation (CTIEC). This is a new national foreign trade enterprise under the auspices of the China National Tobacco Corporation. CTIEC's foreign trade organization registration will allow it to conduct business directly with foreign trade companies. CTIEC will be responsible for importing and exporting leaf tobacco, tobacco products, and all cigarette processing and packaging technology. The organization will also be empowered to enter into all forms of economic and technical cooperation with foreign entities. Branches are to be opened in Shanghai, Guangdong, Fujian, Hubei, and Dalian. The head office will be located in Beijing.

According to the Japan Tobacco and Salt Public Corporation (JTS), Japanese sales of cigarettes for October 1984 were down 1.3 percent from October 1983 to 25.5 billion pieces. For the January-October period, cigarette sales dropped less than 1 percent to 254.6 billion pieces. Domestic cigarettes, which represented 97.98 percent of sales were down .3 percent. The volume of imported cigarettes increased 16.8 percent to 5.13 billion pieces, representing 2 percent of the market. U.S. cigarettes accounted for 97 percent of these imports.

In Jordan, the quantity of illegally imported cigarettes has been increasing in recent years. To solve this problem, the government of Jordan in May 1984, decided to import cigarettes; previously, all foreign-made cigarettes were banned from importation.

An estimated 240 million cigarettes are smuggled into Jordan per year. This is equal to 7 percent of the 3.6 billion locally manufactured cigarettes sold annually.

The Ministry of Supply (MOS) will become the sole legal importer of cigarettes. MOS officials believe that by strictly regulating the importation and distribution of a limited quantity of imported cigarettes they can minimize the illegal importation of cigarettes, provide a legal means for smokers to obtain cigarettes which they now buy illegally, provide additional tax and customs revenue from the imports, and protect the local cigarette industry.

Taiwan's imports of leaf in 1984 have recovered from their low level in 1983. For January-August 1984, imports were 9,618 tons compared to only 10,099 tons for all of 1983. The outlook for 1985 imports is for 16,000 tons, of which 12,000 tons is expected to come from the United States. Despite the buildup of stocks of domestic tobacco, imports will not be significantly affected as quality leaf is needed to produce cigarettes consumed in Taiwan.

Stocks of domestic leaf have grown to excessive levels. By holding the purchase price the same for the 1985 crop, it is hoped production will be discouraged. Taiwan would like to increase leaf exports, but prospects are not optimistic.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

In Brazil, the farmers' price for the 1985 leaf tobacco crop was set, regardless of type, at 275 percent of 1984 levels. This is above the inflation rate of approximately 220 percent forecast for calendar year 1984. It is reported that the tobacco producers have not formally agreed to the price increase, considered below expectation, but that the buying industry are expected to remain firm.

In Canada, on November 22, 1984, Parliament passed a bill to amend the National Farm Products Marketing Agencies Act. The amendment provides enabling legislation for Canadian tobacco growers to form a national tobacco marketing agency. Prior to the amendment, the application of national supply management programs was restricted to Canada's poultry industry. The introduction of a national tobacco agency could result in national production controls, cost-of-production pricing formulas, and import protection.

The EC Commission extended until June 30, 1985, the deadline for paying subsidies on the export of raw tobacco from the 1981 and 1982 crops. The deadline had been December 31, 1984. The subsidies have already been extended several times in hopes of finding outlets for this tobacco. The same regulation also extends the deadline for subsidies on the export of 1983 crop raw tobacco from December 31, 1984, to March 31, 1985.

In Korea, the Office of Monopoly (OM) has set the new leaf export prices. The OM has lowered the "delivered-to-exporter" prices by 5 percent across the board. This action was taken in response to requests from tobacco exporters, who pointed out that Korean tobacco would not be salable under current market conditions at last year's prices. The new export price schedule is as follows:

Grade	1	2	3	4	5
Flue-cured (US $/kg)	2.63	2.39	2.18	1.60	1.12
Burley (US $/kg)	2.49	2.23	1.86	1.50	1.02

Because of the late resolution of the price question and continued concern on the part of some processors about international market conditions, purchases of tobacco for export may be somewhat lower than 1983's 43,000 tons (farm-sales-weight). Some tobacco which has already moved from rural buying stations to OM warehouses may be acquired by processors to meet their blending and export plans.

U.S. TOBACCO DEVELOPMENTS

U.S. Burley Auction Market Report: The U.S. burley auction market re-opened on January 7, 1985, following the Christmas recess. Sales during the 15 sales days prior to the recess totaled 479.2 million pounds and averaged $1.88 per pound. Loan receipts during the period totaled 121.8 million pounds or 25.4 percent of the total sales.

Daily burley sales on January 7, totaled 39.2 million pounds at an average price of $1.87. Loan receipts totaled 12.9 million pounds or 32.8 percent of gross sales for that day.

Cumulative sales through January 7, totaled 518.6 million pounds and averaged $1.88. Loan receipts stand at 134.7 million pounds or 26 percent of the crop. During the first 16 days last year, 419.4 million pounds sold for an average price of $1.78 with 41 percent of the crop going under loan.

The 1984 U.S. burley crop is estimated at 740 million pounds -- more than 50 percent larger than the 1983 crop.

USITC Holds Section 22 Hearings: On January 3 and 4, 1985, the United States International Trade Commission held public hearings on the Section 22 tobacco investigation they are conducting. The Commission heard testimony from more than a dozen Congressmen, USDA, The American Farm Bureau Federation, the Leaf Tobacco Dealers Association/Tobacco Association of the U.S., officials from Zimbabwe and Malawi, and others.

The ITC investigation was initiated on September 7, 1984, when the President, acting upon advice from the Secretary of Agriculture, directed the United States International Trade Commission to make an immediate investigation under Section 22 of the Agricultural Adjustment Act of 1933 to determined whether imports may be materially interfering with the tobacco price support and production adjustment programs administered by the USDA.

The Commission is scheduled to report the result of its investigation to President Reagan on February 11, 1985.

U.S. TRADE SUMMARY

U.S. Tobacco Trade and Outlook--U.S. unmanufactured tobacco exports during November 1984 were 44,654 tons valued at $267 million, up 11 percent from November 1983. Flue-cured tobacco accounted for 74 percent of November exports. Japan was the leading market with 15,613, followed by Egypt--6,210 tons and West Germany--5,860 tons.

Cumulative exports for the January-November period were 221,011 tons valued at $1.3 billion, about level with the same period in 1983. The flue-cured tobacco share was 63 percent while the burley share was 15 percent. The leading markets were Japan--27,807, West Germany--27,574, and Spain--23,345.

Flue-cured tobacco exports during November 1984 were 33,212 tons valued at $235 million, an increase of 15 percent in volume from November 1983. Japan was the leading market taking 13,428 tons. January-November exports were 132,098 tons valued at $901 million, a rise of 10 percent in volume from a year ago. The leading destinations were Japan--19,359 tons, Spain--18,228, West Germany--17,469 tons, and United Kingdom--10,651 tons.

Burley tobacco exports during November 1984 were 2,232 tons value at $14.8 million, a decrease of 16 percent in volume from November 1983. Cumulative exports for January-November were 31,741 tons valued at $230 million, a drop of 22 percent in quantity from the same period in 1983. The leading destinations for burley exports were West Germany--5,319 tons, Italy--5,310 tons, and Japan--4,845 tons.

Exports of other types (excluding flue-cured and burley) for January-November 1984 were 47,172 tons valued at $170 million, a decrease of 6 percent in volume from a year ago. Stems, trimmings and scrap accounted for 66 percent of these exports.

U.S. cigarette exports during November were 6 billion pieces valued at $120 million, a rise of 15 percent in volume from November 1983. January-November exports were 52.1 billion pieces valued at $1.03 billion, down 6 percent in volume; however, value increased 1 percent from a year ago. Leading markets were Belgium-Luxembourg (10.46 billion pieces), Hong Kong (6.2 billion pieces), Saudi Arabia (6 billion pieces), and Japan (5.9 billion pieces).

Unmanufactured tobacco imports for consumption (including the category of "tobacco manufactured or not manufactured, not specially provided for") during November were 17,929 tons valued at $54 million, about the same level as November 1983. Oriental tobacco was the largest category with 8,126 tons, followed by stemmed cigarette leaf with 3,250 tons.

Cumulative imports for January-November 1984 were 176,703 tons valued at $523 million, down 23 percent from the same period in 1983. Oriental tobacco imports totaled 72,103 tons followed by stemmed cigarette leaf with 38,118 tons. Total cigarette leaf imports for January-November 1984 were up 35 percent compared to a year earlier.

General imports (actual arrivals) of unmanufactured tobacco (including the category of "tobacco manufactured or not manufactured, not specially provided for") for November 1984 were 9,801 tons valued at $22 million, a drop of 15 percent from November 1983. January-November imports were 204,493 tons valued at $612 million, an increase of 6 percent from January-November 1983.

Oriental leaf was the largest category with 79,492 tons, followed by "other cigarettes leaf" with 64,027 tons. These two categories represented 70 percent of all general imports.

Special Section: The Production and Marketing of Flue-Cured Tobacco in Argentina

The following report is based on a trip taken to Argentina in March 1984 by Stan Cohen, Tobacco, Cotton, and Seeds Division. The author expresses his sincere thanks and appreciation for the invaluable assistance that was provided to him by the Salta and Jujuy tobacco cooperatives and chambers, officials of the Argentine government, cigarette manufacturers, tobacco exporters, and the office of the Agricultural Attache, U.S. Embassy, Buenos Aires.

INTRODUCTION

Argentine production and exports of unmanufactured tobacco have averaged 65,360 tons and 22,955 tons, respectively, during the period 1979/80 to 1983/84. Production and exports for 1983/84 are estimated at 77,921 tons and 25,000 tons, respectively. Although the flue-cured crops in the provinces of Salta and Jujuy suffered serious weather-related losses in 1983/84, total tobacco production was up slightly from 1982/83 as a result of expanded production of dark air-cured tobacco. In contrast, exports have slipped from the 1982/83 level of 29,156 tons due to weak foreign demand, increased domestic consumption, and unusually strong sales at the end of 1982/83, which greatly boosted last year's exports. Production and exports of unmanufactured tobacco in 1984/85 are forecast at 73,557 tons and 25,000 tons, respectively.

In recent years, exports of flue-cured tobacco have accounted for between 60 and 70 percent of total tobacco exports. Major export markets include the United States, West Germany, and the Netherlands. Flue-cured production--nearly all of which is in the provinces of Salta and Jujuy--averaged 39,030 tons from 1979/80 to 1983/84. 1/ Approximately half of the flue-cured tobacco produced is exported by the Salta and Jujuy tobacco cooperatives and private leaf exporters; the remainder is purchased for domestic use by the country's two cigarette manufacturers, Nobleza Piccardo and Massalin Particulares--subsidiaries, respectively, of British American Tobacco (BAT) and Philip Morris. The majority of the dark air-cured (criollo correntino) and burley produced is consumed by the local cigarette industry. Although exports of burley have been small compared with flue-cured, the recent expansion of burley production in the province of Misiones could eventually result in a significant increase in burley exports.

PRODUCTION SYSTEM

There are approximately 600 farmers in Salta and 800 farmers in Jujuy who grow tobacco on a permanent basis. Whereas the average area in tobacco in Salta varies between 15 and 20 hectares, farmers in Jujuy tend to have a smaller area in tobacco. In Jujuy, approximately 41 percent of the flue-cured producers have 10 or fewer hectares in tobacco. In addition to tobacco, other crops grown include dry beans, alfalfa, corn, oats, hot peppers, and sugarcane.

1/ The provinces of Salta and Jujuy are located approximately 850 miles northwest of Buenos Aires and are bordered by Chile on the west and Bolivia to the north.

The growing season for flue-cured tobacco extends from July through March. Preparation of seed beds occurs during July and August followed by transplanting from September through November. Transplanting is done manually as only 3 percent of the farmers in Salta and Jujuy have mechanical transplanters. Fertilization and the application of furadan--an insecticide used to combat stem borers--occur 10 days after transplanting, followed in approximately 30 days by the application of trichlorfon (Dylox); the latter is used to control hornworms and budworms. Depending on the date of transplanting, the crop is cultivated 5 times over a 40-day period from mid-September to mid-January: 4 inter-row cultivations are done by tractor and a fifth cultivation of plants on the row is done with the use of a hoe. During cultivation, the rows are ridged and the furrows deepened in order that the latter may serve as irrigation canals. Through the use of gravity irrigation, the crop is irrigated 7-12 times from September to December. Although the timing of suckering depends in part on the varieties planted, suckering is normally done when 50 percent of the plant has flowered, which generally occurs 90-100 days (November to February) after transplanting. A contact sucker control agent such as offshoot is initially applied and the plant is then topped. Seven days after topping the plant, a systemic sucker control agent such as maleic hydrazide or a contact will be applied again.

Harvesting begins approximately 110 days (mid-December through March) after transplanting. Five to six primings are done manually at intervals of one week. The reliance on harvesting by hand is due to the prohibitive cost of mechanical harvesters, the difficulty of using harvesters in fields that have irrigation canals, and the often waterlogged field conditions at harvest time. Unlike the porous, sandy loams in the tobacco producing areas of the United States, soils in Salta and Jujuy tend to be clayish, thus retaining more water. Although looping machines 2/ are more widely used than mechanical harvesters, the cost of performing this operation manually as opposed to mechanically is comparable due to the relative abundance of cheap, seasonal labor, thus discouraging the adoption of the looper on a large scale. This is particularly true in Jujuy where seasonal labor appears to be in greater supply than Salta due to the proximity of the former to Bolivia, the source of much of this labor. While farmers who have used the looping machine have been reasonably satisfied with the results obtained, leaf produced in Jujuy tends to be somewhat bigger and heavier than that produced in Salta, making mechanization of this operation more difficult.

In the province of Salta, there are 6,500-7,000 conventional barns and 300 bulk curing barns. 3/ Tobacco cured in bulk barns accounts for about 10 percent of total annual production in Salta. Purchases of bulk curing barns, however, have recently declined due to increases in the price of diesel fuel. Although wood is currently used for curing in conventional barns, in 1985, it is expected that nearly one-half of the producers in the province will shift over to gas when construction of a gas pipeline is completed. With the price of wood at about 400-450 pesos per cubic meter in February 1984, it is estimated that wood used for curing accounts for about 12 percent of the total cost of tobacco production. 4/

2/ About 80-100 looping machines have been sold in the Salta area.
3/ The most popular types of bulk barns in Salta and Jujuy are manufactured by INA, a local firm, and Powell.
4/ Conventional barns are made from brick and mud and have a capacity of 1,000 sticks or the equivalent of 400-500 kilograms of dry weight tobacco. To cure one barn of tobacco, approximately 6 cubic meters of wood is required.
One U.S. dollar equals 27.7 pesos, February 1984.

In the province of Jujuy, there are 5,800 conventional barns and about 250 bulk curing barns. Gas and wood are used in approximately 60 percent and 40 percent, respectively, of the conventional barns in the province. A conventional gas barn costs about 80,000 pesos (2,888 dollars) whereas a Powell bulk curing barn imported from the United States costs about 400,000 pesos (14,440 dollars). Bulk curing barns account for under 5 percent of the province's total curing capacity. Currently, there is a shortage of curing capacity in the province, causing farmers to delay harvesting and thus reduce the quality of the leaf. It is asserted that over-ripeness due to late harvesting accounts for up to 40 percent of the leaf that is classed in the lower grades.

LEAF QUALITY

Although soil and climatic conditions in Jujuy and Salta are considered to be comparable, the quality of flue-cured tobacco produced in Jujuy is generally regarded as superior to that of Salta. Whereas all Salta flue-cured is characterized as filler leaf, approximately 50 percent of Jujuy leaf is considered to be full-flavored. In spite of the fact that Jujuy experienced wetter weather in 1983/84 than Salta, hampering curing and thus resulting in generally lower official grades than in Salta, most observers still judged the Jujuy crop to be better than that of Salta's. In addition to higher quality, the average yield of flue-cured in Jujuy is 1,650 kilograms per hectare compared to about 1,300 kilograms per hectare in Salta. The higher yields and superior quality of Jujuy flue-cured are generally attributed to the more widespread use of improved U.S. varieties and better cultural practices, most notably, topping and suckering. With respect to plant varieties, farmers in Jujuy normally plant improved U.S. varieties such as McNair 944, Coker 347, and Speight G-28 whereas farmers in Salta generally plant Coker 254--the U.S variety most closely related to the local variety known as Malvinas. In addition to superior topping and suckering practices, the fertilizer formulation (9 1/2-14-21) used in Jujuy reputedly contributes to the higher yields obtained. The formulation (5-20-20) most commonly used in Salta apparently leaches out much more quickly. Researchers contend that if topping and suckering were done correctly, farmers in Salta could obtain a yield of 1,600 kilograms per hectare as opposed to the current average yield of 1,300 kilograms. Although yields and quality of Salta flue-cured also suffer from a shortage of barns--the average for the Salta area is one barn for every three hectares rather than the recommended one barn for every two hectares--this also appears to be the case in Jujuy.

While the quality of Jujuy flue-cured has steadily improved over the last 10 years, management and cultural practices associated with transplanting and the use of maleic hydrazide continue to adversely affect yields and quality. With respect to transplanting, farmers often transplant tobacco in August as opposed to the recommended period of October to November when the rains occur with greater regularity. If farmers transplanted in October or November, it is asserted that yields could approach 2,500 kilograms per hectare as well as reducing the costs associated with irrigation. The tendency to transplant too early is largely due to the fact that tobacco delivered in the beginning of the marketing season generally fetches a higher price because of the limited amount on the market. Approximately 70 to 80 percent of the farmers in the Jujuy area use maleic hydrazide, a systemic, as a sucker control agent. Because of the application of maleic hydrazide, the leaves quickly turn

yellow, causing many farmers to believe that the leaves are ripe, and thus to begin harvesting too soon. The resulting leaf has a slick, greyish appearance and is often rejected. Although the use of contacts requires greater managerial skills on the part of the farmer, the liklihood of harvesting prematurely is reduced. Consequently, it is generally recommended that a contact be used first followed later by the application of maleic hydrazide.

COST OF PRODUCTION

Data on the cost of flue-cured production in the provinces of Salta and Jujuy were obtained from a number of sources--producer cooperatives, cigarette manufacturers, and government agencies. Not surprisingly, the cost figures obtained from these groups frequently differ, largely as the result of differences in estimated levels of input use and the types of budgeting techniques used. An attempt has thus been made to reconcile these differences and estimate an average cost of production based on these sources. Consequently, the cost estimates presented in this paper are not those of any one group, but rather represent a composite drawn from several sources. Furthermore, although the components of total cost are presented in a format similar to that used by the United States Department of Agriculture, this is not intended to imply that similar sampling and budgeting techniques are employed in Argentina. 5/ Two final caveats are in order. The estimates presented are for February 1984 and are expressed in U.S. dollar equivalents. Although production costs in pesos from September 1983 to February 1984 nearly doubled due to monthly inflation approaching 20 percent, production costs in terms of the U.S. dollar actually declined due to the continued devaluation of the peso. Finally, it should be borne in mind that the cost estimates presented are for an "average" flue-cured producer. Because of variability in managerial skills, technology used, soil, and climatic conditions, the cost structure of many producers will likely deviate from this average.

The total cost of producing one hectare of flue-cured tobacco is estimated at 3,051.84 dollars (table E). Labor and curing fuel are the largest cost items, accounting for 34.7 percent and 7.9 percent, respectively, of total cost. Labor usage per hectare is estimated at 130 man-days and has been valued at the minimum wage. Labor usage, however, can vary between 110 and 150 man-days per hectare depending on the degree of crop mechanization. Harvest and post-harvest operations account for approximately 63 percent of the total labor used. Although an increase in the use of bulk barns, loopers, and mechanical harvesters could result in significant labor-savings, the high price of diesel fuel coupled with the relative abundance of cheap, seasonal labor are likely to discourage wider use of such equipment in the the short term. However, the anticipated increase in the use of gas in the province of Salta could result in reduced curing fuel costs over the next several years: wood accounts for approximately 12 percent of total cost as opposed to 5 percent for gas.

5/ In addition to the much larger sample size employed in the USDA study of costs, land and management costs are estimated quite differently. See the following publication for a detailed explanation of the budgeting techniques employed by the USDA: Grise, Verner N., Flue-Cured Tobacco Production Costs, Economic Research Service, ERS-667, USDA, Washington, D.C., October 1981.

The cost of producing one kilogram of flue-cured tobacco in Argentina is estimated at 2.18 dollars. Although this assumes an average yield of 1,400 kilograms per hectare, producers in the province of Jujuy frequently achieve yields of 1,600 kilograms, which would result in a cost of 1.92 dollars per kilogram. In the United States, the cost of producing one kilogram of flue-cured tobacco is estimated at 3.46 dollars. This estimate is based on a total cost--variable, fixed, and land and quota allocation--of 8,343.28 dollars per hectare and an average yield of 2,413 kilograms per hectare. 6/ In the United States, the cost of land and the quota allocation accounts for 29.2 percent of the total cost of production compared with 3.1 percent in Argentina. 7/ Deducting the cost of land and the quota allocation, the cost of producing one kilogram of flue-cured tobacco in Argentina is 2.11 dollars and 2.45 dollars in the United States.

MARKETING

Minimum producer prices for tobacco are jointly determined by the Department of Agriculture and Livestock, producer groups, and the cigarette industry. In October, the government proposes prices for an average grade of each type of tobacco--flue-cured, burley, and dark air-cured. Following the announcement of these prices, a commission composed of representatives from the cigarette industry and producers meet to negotiate and determine the official price of an average grade for each type of tobacco. Prices for the different grades of each type of tobacco are pegged to the price of the average grade in accordance with a schedule of weights (table F). In February 1984, the price of the average grade of flue-cured tobacco was 49.47 pesos per kilogram. Currently, there are 18 grades of flue-cured tobacco; grade is determined on the basis of the following criteria: color--orange and lemon; position of the leaf on the stalk--bottom, middle, and top; three classes of quality with respect to each of the three stalk positions; and a nondescript quality. There are 12 grades of burley and 7 grades of dark air-cured tobacco, with the grades of these types of tobacco determined on the basis of stalk position and quality.

Tobacco production is subsidized by the Argentine government through funds obtained from a 7-percent tax on cigarettes. The Tobacco Fund, a government organization, uses the revenue generated from this tax to pay farmers 40 percent of the official producer price for unmanufactured tobacco; the remaining 60 percent is paid either by the tobacco cooperatives, private leaf exporters, or the cigarette manufacturers. In practice, however, the Tobacco Fund's payments to the producers frequently exceed 40 percent of the minimum price. Due to the large amount of tobacco harvested in March and April, tax revenue generated by the 7-percent tax is rarely sufficient to meet payments to farmers and are thus temporarily suspended. In order to offset the losses incurred by the producers, the Fund will increase the prices paid, absorbing directly the additional expenditure. Thus, for example, the Fund's payments accounted for 60 percent and 54 percent, respectively, of total payments to flue-cured producers in 1983 and 1984.

6/ Grise, Verner N., Tobacco: Outlook and Situation, Economic Research Service, TS-189, USDA, Washington D.C., September 1984.
7/ There is no land and quota allocation system in Argentina.

In the provinces of Salta and Jujuy, farmers sell tobacco to the Salta cooperative, the Jujuy cooperative, and the cigarette manufacturers--Massalin Particulares and Nobleza Piccardo. In response to the steady growth in exports of flue-cured tobacco beginning in the mid-1960s, the Jujuy and Salta tobacco cooperatives were established in 1969 and 1970, respectively, in order to enhance the marketing strength of the producers vis-a-vis the private leaf exporters and cigarette manufacturers . 8/ Tobacco purchased by the cooperatives is exported whereas nearly all tobacco bought by the cigarette manufacturers is used domestically for the manufacture of cigarettes. In addition to performing marketing functions, the cooperatives provide extension services, assistance in the finance and supply of inputs, and tobacco processing for member farmers. 9/

In 1982/83, the Salta cooperative purchased slightly over 9,000 tons of flue-cured tobacco or approximtely 50 percent of the province's total flue-cured production. In 1983/84, it is estimated that 7,000 tons of flue-cured tobacco will be purchased. In recent years, major buyers of the cooperative's tobacco have been private leaf exporters such as Carolina Leaf (Dibrell), Kulenkampff (German), Intabex, and Koch Shelteman B.V. (Dutch). In addition, the cooperative has made direct sales, i.e., through brokers paid a commission, to state tobacco monopolies and Eastern European countries. The major direct sales have been to Brinkmann (German), SEITA (the French tobacco monopoly), and the Italian tobacco monopoly. In 1982/83, the Jujuy cooperative purchased slightly over 13,000 tons of flue-cured and 1,000 tons of burley tobacco or approximately 56 percent of the province's combined flue-cured and burley production. In 1983/84, it is estimated that 11,000 tons of flue-cured and 3,000 tons of burley will be purchased. Traditionally, Universal Leaf and Tobacco Company and Transcontinental--private leaf exporters--have been the largest buyers of the cooperative's tobacco. In recent years, Austin and Kulenkampff have also purchased leaf from the cooperative, but in smaller amounts than Universal and Transcontinental.

Massalin Particulares and Nobleza Piccardo buy the majority of its flue-cured tobacco in the provinces of Salta, Jujuy, and Misiones. In the provinces of Salta and Jujuy, the manufacturer and the producer agree at the beginning of each season on the quantity of tobacco that will be purchased. This type of arrangement has been in effect since the early 1960s and is often referred to as the quota system. It is purely a verbal agreement with no written contract. Furthermore, a producer who has a quota to sell tobacco to one of the manufacturers will most likely also sell tobacco to one of the cooperatives. Although the manufacturers have extension agents in Salta and Jujuy who work with farmers who have quotas, they only provide technical advice and are not directly involved in supplying inputs to farmers. In 1982/83, the manufacturers purchased 8,700 tons of flue-cured tobacco in Salta and 9,600 tons in Jujuy.

Although the province of Misiones has traditionally accounted for only a small percentage of Argentina's total flue-cured production, production has trended gradually upward in the last 5 years. In Misiones, farmers had traditionally

8/ The Salta cooperative began actual operations in the 1972/73 season.
9/ The Salta cooperative has one processing plant with a capacity of approximately 9,000 tons. The Jujuy cooperative has two processing plants with a combined capacity of 18,000 tons.

grown criollo misionero, a dark air-cured tobacco, most of which was exported. However, with the sharp decline in prices for this type of tobacco in the late 1970s and reduced purchases by the French tobacco monopoly--the major buyer of criollo misionero--production declined and farmers increasingly switched to the production of flue-cured and burley tobacco. In contrast to Salta and Jujuy, nearly all flue-cured tobacco planted in Misiones is grown and marketed under contract to cigarette manufacturers and/or private leaf exporters, with the latter groups supplying technical advice as well as inputs to those farmers with whom they have contracts. Furthermore, conditions characterizing the production unit in Misiones are markedly different from those found in Salta and Jujuy: 1) the average size tobacco farm in Misiones tends to be much smaller, averaging between one and two hectares, and thus lending itself more easily to labor intensive cultural practices; 2) the cost of land is reportedly much lower in Misiones; and 3) the family is the major source of farm labor in Misiones in contrast to Salta and Jujuy where the use of hired labor is widespread. In light of these factors and the introduction in 1983/84 of a new program for the production of burley tobacco, prospects for increased production of both flue-cured and burley in the province of Misiones appear quite favorable.

CONCLUSION

Large increases in flue-cured production in the provinces of Salta and Jujuy are unlikely in the short term in light of continued, weak world demand for tobacco, relatively high production costs, and the already substantial area planted in flue-cured tobacco. Although labor costs in Argentina are low relative to those of the United States, wages of farm laborers remain high in comparison to such tobacco exporters as Brazil and Zimbabwe, thereby undercutting the competitiveness of Argentine flue-cured on world markets. Hence, continued emphasis can be expected to be placed on increasing yields, improving leaf quality, and reducing production costs. In contrast, prospects for increased production in the province of Misiones appear more favorable due to reportedly lower costs of production and the tendency of producers to reduce the production of dark air-cured tobacco in favor of flue-cured and burley.

Table E

Average Cost of Production of Flue-Cured Tobacco, Salta and Jujuy Provinces, Argentina, February, 1984.

Cost Item	$ U.S. per Hectare
Variable	2,181.36
Labor 1/	1,058.62
Plant Bed Materials	39.71
Fertilizer	160.83
Pesticides	199.78
Sucker Control	133.53
Fuel 2/	84.11
Repairs 3/	90.83
Irrigation 4/	20.43
Curing Fuel 5/	242.52
Other 6/	72.99
Interest	78.01
Machinery and Barn Ownership 7/	388.47
Replacement	184.87
Interest	130.90
Taxes and Insurance 8/	72.70
General Farm Overhead	54.15
Management	332.09
Land	95.77
Total Cost	3,051.84
Yield Per Hectare (Kg)	1,400.00
Cost Per Kilogram	2.18

Note: One U.S. dollar equals 27.7 pesos, February 1984.

1/ Labor usage is estimated at 130 man days and is valued at the minimum wage. 2/ Includes fuel for tractor, machinery, and pickup truck. 3/ Includes tractor, machinery, and equipment. 4/ Includes interest on dam and channels and water tax. 5/ Includes gas or wood. 6/ Includes sticks, cover crop seed, screens, and hail insurance. 7/ Includes tractor, machinery, pickup truck, barns, sheds, and other curing equipment. 8/ Includes insurance and license for pickup truck, land tax, and patrimony tax.

Table F

Prices and Grades of Flue-Cured Tobacco, Argentina, March 1984, (Pesos per Kilogram).

Grade	Price	Weight
M1N	69.67	100
M1L	66.19	95
C1N	63.40	91
B1L	62.70	90
C1L	59.92	86
M2N	59.22	85
M2L	56.43	81
C2N	52.95	76
B2L	52.25	75
C2L	50.86	73
M3N 1/	49.47	71
M3L	48.77	70
C3N	45.22	64
B3L	43.89	63
C3L	41.80	60
4a.A	35.53	51
4a.B	32.05	46
4a.C	29.26	42

Note: Prices in effect as of March 1984 when one U.S. dollar equaled 30.8 pesos. N and L refer, respectively, to orange and lemon colored leaf. C, M, and B refer, respectively, to top, middle, and bottom stalk positions. Grades 4a.A, 4a.B, and 4a.C are nondescript grades.

1/ M3N was the average grade of flue-cured tobacco in 1983/84. To offset the effects of inflation and delays in payment from the Tobacco Fund, the price of M3N was eventually increased to 62.79 pesos per kilogram. To obtain the price of one of the other grades, e.g., M2L, the following computation is performed: divide 81 by 71 (the weights for M2L and M3N) and then multiply this value by the price of the average grade--M3N.

SUMMARY

The favorable U.S. tobacco trade balance in 1984 rose 13 percent to $2.07 billion, resulting from an rose in unmanufactured tobacco exports and a decline in imports for consumption. Exports of unmanufactured tobacco and tobacco product exports expanded 2 percent to $2.7 billion, while imports of leaf and products for consumption dropped 22 percent to $636 million.

Unmanufactured leaf exports during 1984 were 246,156 tons valued at $1.5 billion, an increase of 3 percent in volume from 1983. Flue-cured leaf exports increased 13 percent to 158,666 tons, offsetting a 19 percent fall in burley exports to 33,380 tons. The large increase in flue-cured tobacco exports was the result of a better quality crop in 1984. Cigarette exports during 1984 were $56.5 million valued at $1.12 billion, a 7 percent drop in volume from the 1983 level.

Unmanufactured tobacco imports for consumption during 1984 were 188,757 tons worth $558 million, down 21 percent from the record 1983 level. The large imports that year resulted from heavy withdrawals of machine-threshed tobacco from bonded warehouses before the tariff reclassification in August 1983. Oriental leaf was the largest import category during 1984 at 76,618 tons, followed by stemmed cigarette leaf, 41,821 tons.

World Tobacco Highlights include:

-Egypt requires license to import cigarettes.
-Japan's cigarette sales down 1 percent for January-November 1984.
-Japanese tobacco excise tax to expire in March 1985.
-Thailand rejects joint cigarette production with U.S. manufacturers.
-Philippines floor price of flue-cured tobacco is increased.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Egypt has added cigarettes to the list of imported commodities requiring a license. This action will give the government control over the influx of imported cigarettes at a time when local production is adequate for domestic and export demand. So far, the change has not resulted in reduced availability of popular U.S. and British cigarettes on the local market. However, current negotiations between Eastern Tobacco Company and a major U.S. company may result in the third agreement between Eastern and foreign manufacturers, whereby foreign brands would be produced in Egypt by Eastern for a fee.

According to the Japan Tobacco and Salt Public Corporation (JTS), Japanese sales of cigarettes for November 1984 were down 1 percent from November 1983 to 25.6 billion pieces. For the January-November period, cigarette sales dropped less than 1 percent to 280.2 billion pieces. Domestic cigarettes, which represented 98 percent of sales, were down 0.4 percent. The volume of imported cigarettes increased 16 percent to 5.7 billion pieces, representing 2 percent of the market. U.S. cigarettes accounted for 96 percent of imports.

The Japanese temporary tobacco excise tax surcharge, imposed in 1983, will expire on March 31, 1985, and will not be replaced. This raises a strong possibility that imported cigarettes will become more price competitive in this market. At present, with premium cigarettes retailing for 220 yen and foreign cigarettes for 280 yen, the price differential has been one factor holding foreign cigarette sales to 2 percent of the market. The surcharge adds about 20 yen per pack to the wholesale price of both JTS and foreign cigarettes.

Foreign cigarette companies are hoping that JTS will decide to maintain its present retail price level. At the same time, foreign cigarette firms have the choice of reducing their retail price by the full 20 yen/pack. If JTS keeps its retail price levels, a reduction in retail prices of foreign firms would improve their price competitiveness.

In Thailand, the Ministry of Finance has rejected long-pending proposals by U.S. cigarette manufacturers for joint cigarette production of international brands with the Thailand Tobacco Monopoly (TTM). The decision was reached by TTM board sometime in late December. The reported justification was that the ministry preferred to see the state-owned TTM expand production capacity on its own. The TTM has decided to proceed with plans to build a sixth plant in Chiang Mai, which will produce cigarettes from locally grown tobacco for low-income smokers. The project will require about 2,000 million baht, part of which will come from TTM funds and the rest from a loan.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

In the Philippines, the government approved the proposed increase in the floor prices of flue-cured tobacco by grade effective for the 1985 trading season. The price increase was recommended by the Philippine Virginia Tobacco Administration (PVTA) after meeting with representatives of the farmers group, traders, and cigarette manufacturers. The floor prices of flue-cured tobacco follows:

Grade	1984 Pesos/kg	1985 Pesos/kg	Percent Increase
A	15	18	20
B	13	15.5	19
C	11.5	14	22
D	10	12	20
E	9.5	11.5	21
GR	6	7.5	25
PR	2	3	50

The price increase should improve farmers' income which has declined because higher in costs of cash inputs, such as fertilizer, pesticides, firewood, gasoline, oil, and labor. The move is also intended to protect the farmers from a possible price slump which may result if surplus production occurs in 1985.

PVTA has undertaken an intensive information drive advising Virginia tobacco farmers to decrease production by 30 percent from last year's level. Those farmers who cannot adopt the recommended technology and whose areas are either marginal or have a high salinity level are urged to discontinue planting Virginia tobacco as their produce would be least desired by the markets. Efficient farmers, on the other hand, are strongly encouraged to produce high quality tobacco intended primarily for the export market.

U.S. TOBACCO DEVELOPMENTS

U.S. Burley Auction Market Report: Sales on the U.S. burley auction market through the end of January 1985, totaled over 690 million pounds and averaged $1.88 per pound. Loan receipts during the period amounted to 193 million pounds, or 27.8 percent of the total sales.

Daily burley sales on January 31, 1985, reached 693 million pounds at an average price of $1.88. Loan receipts totaled 192.7 million pounds or 27.8 percent of gross sales for that day.

USITC Votes on Tobacco Section 22: The U.S. International Trade Commission, on February 1, 1985, found by majority vote of 4-1 that imports of tobacco were not certain to materially interfere with the programs administered by the Department of Agriculture. The Commission is scheduled to report its findings and recommendations to the President on February 11, 1985; the President is not bound by the Commission's findings.

The ITC investigation was initiated on September 7, 1984, when the President, acting upon advice from the Secretary of Agriculture, directed the U. S. International Trade Commission to make an immediate investigation under Section 22 of the Agricultural Adjustment Act of 1933 to determined whether imports were materially interfering with the tobacco price support and production adjustment programs administered by the USDA.

U.S. Tobacco Trade and Outlook - U.S. unmanufactured tobacco exports in calendar 1984 were 246,156 tons valued at $1.5 billion, an increase of 3 percent in volume and value from the 1983 level. Flue-cured tobacco exports accounted for most of the gain due to a higher quality crop in 1984. Japan was the largest market taking 41,784 tons, followed by West Germany, 29,929 tons; and Spain, 23,814 tons. Other major markets were Egypt (16,921 tons), United Kingdom (14,429) and Italy (14,175).

For December 1984, unmanufactured exports were 35,145 tons valued at $211 million, up 25 percent in volume and 23 percent in value from December 1983. Flue-cured tobacco accounted for 76 percent of total exports. Japan and Taiwan were the leading markets taking 13,976 tons and 8,083 tons, respectively.

Flue-cured tobacco exports during 1984 were 158,666 tons worth at $1.1 billion, up 13 percent in volume and 12 percent in value from the year earlier. Japan was the leading destination taking 30,877 tons, followed by West Germany (18,774 tons), and Spain (18,634 tons). December flue-cured exports were 26,568 tons valued at $186 million, an increase of 25 percent in quantity and 21 percent in value from December 1983. Japan and Taiwan took 71 percent of the months shipments.

Burley tobacco exports in 1984 were 33,380 tons worth at $242 million, a 19 percent decline in volume and value from 1983. Major markets were West Germany (5696 tons), Italy (5,337), and Japan (4,953). December burley exports were 1,639 tons valued at $12 million, up 145 percent in volume and 116 percent in value from December 1983.

Exports of other types (excluding flue-cured and burley) for 1984 were 54,110 tons valued at $182 million, a drop of 3 percent in volume and value. The category stems, trimmings, and scrap accounted for 69 percent of exports of other types. Dark fire-cured (Kentucky-Tennessee) tobacco exports decreased 28 percent to 6,433 tons. Maryland tobacco exports dropped 55 percent to 1,663 tons.

Cigarette exports for 1984 were 56.5 billion pieces ($1.12 billion), down 7 percent in volume from the 1983 level. The strong dollar is the major reason for the decline in U.S. cigarette exports. Leading markets during 1984 were Belguim-Luxembourg (11.2 billion pieces), Hong Kong (7.5 billion), Japan (6.3 billion), and Saudi Arabia (6.1 billion).

Unmanufactured tobacco imports for consumption (including, category "tobacco manufactured or not manufactured, not specially provided for") during 1984 were 188,757 tons valued at $558 million, 21 percent below the 1983 record level. The large imports during 1983 reflected heavy withdrawals of machine threshed leaf from bonded warehouses before the tariff reclassification in August 1983. Oriental leaf was the largest category during 1984 with 76,618 tons, followed by stemmed cigarette leaf with 41,821 tons. Leading sources of imports were Turkey (50,953 tons), Brazil (29,218), Greece (14,062), Italy (7,812) and Canada (7,264).

For December 1984, imports for consumption were 12,054 tons valued at $34.8 million, an increase of 11 percent in volume from December 1983. Oriental leaf imports totaled 4,515 tons, followed by stemmed cigarette leaf imports with 3,703 tons.

General imports (actual arrivals) of unmanufactured tobacco (including the category "tobacco manufactured or not manufactured, not specially provided for") during 1984 were 212,957 tons valued at $629.2 million, up 2 percent in volume from 1983. Oriental leaf imports were 80,100 tons, followed by other cigarette leaf at 68,352 tons.

General imports for December 1984 were 8,464 tons worth $17.6 million, a 43-percent drop from December 1983. Other cigarette leaf at 4,325 tons was the largest category.

SUMMARY

The favorable U.S. tobacco trade balance in 1984 rose 13 percent to $2.07 billion, resulting from an rose in unmanufactured tobacco exports and a decline in imports for consumption. Exports of unmanufactured tobacco and tobacco product exports expanded 2 percent to $2.7 billion, while imports of leaf and products for consumption dropped 22 percent to $636 million.

Unmanufactured leaf exports during 1984 were 246,156 tons valued at $1.5 billion, an increase of 3 percent in volume from 1983. Flue-cured leaf exports increased 13 percent to 158,666 tons, offsetting a 19 percent fall in burley exports to 33,380 tons. The large increase in flue-cured tobacco exports was the result of a better quality crop in 1984. Cigarette exports during 1984 were $56.5 million valued at $1.12 billion, a 7 percent drop in volume from the 1983 level.

Unmanufactured tobacco imports for consumption during 1984 were 188,757 tons worth $558 million, down 21 percent from the record 1983 level. The large imports that year resulted from heavy withdrawals of machine-threshed tobacco from bonded warehouses before the tariff reclassification in August 1983. Oriental leaf was the largest import category during 1984 at 76,618 tons, followed by stemmed cigarette leaf, 41,821 tons.

World Tobacco Highlights include:

-Egypt requires license to import cigarettes.
-Japan's cigarette sales down 1 percent for January-November 1984.
-Japanese tobacco excise tax to expire in March 1985.
-Thailand rejects joint cigarette production with U.S. manufacturers.
-Philippines floor price of flue-cured tobacco is increased.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Egypt has added cigarettes to the list of imported commodities requiring a license. This action will give the government control over the influx of imported cigarettes at a time when local production is adequate for domestic and export demand. So far, the change has not resulted in reduced availability of popular U.S. and British cigarettes on the local market. However, current negotiations between Eastern Tobacco Company and a major U.S. company may result in the third agreement between Eastern and foreign manufacturers, whereby foreign brands would be produced in Egypt by Eastern for a fee.

According to the Japan Tobacco and Salt Public Corporation (JTS), Japanese sales of cigarettes for November 1984 were down 1 percent from November 1983 to 25.6 billion pieces. For the January-November period, cigarette sales dropped less than 1 percent to 280.2 billion pieces. Domestic cigarettes, which represented 98 percent of sales, were down 0.4 percent. The volume of imported cigarettes increased 16 percent to 5.7 billion pieces, representing 2 percent of the market. U.S. cigarettes accounted for 96 percent of imports.

The Japanese temporary tobacco excise tax surcharge, imposed in 1983, will expire on March 31, 1985, and will not be replaced. This raises a strong possibility that imported cigarettes will become more price competitive in this market. At present, with premium cigarettes retailing for 220 yen and foreign cigarettes for 280 yen, the price differential has been one factor holding foreign cigarette sales to 2 percent of the market. The surcharge adds about 20 yen per pack to the wholesale price of both JTS and foreign cigarettes.

Foreign cigarette companies are hoping that JTS will decide to maintain its present retail price level. At the same time, foreign cigarette firms have the choice of reducing their retail price by the full 20 yen/pack. If JTS keeps its retail price levels, a reduction in retail prices of foreign firms would improve their price competitiveness.

In Thailand, the Ministry of Finance has rejected long-pending proposals by U.S. cigarette manufacturers for joint cigarette production of international brands with the Thailand Tobacco Monopoly (TTM). The decision was reached by TTM board sometime in late December. The reported justification was that the ministry preferred to see the state-owned TTM expand production capacity on its own. The TTM has decided to proceed with plans to build a sixth plant in Chiang Mai, which will produce cigarettes from locally grown tobacco for low-income smokers. The project will require about 2,000 million baht, part of which will come from TTM funds and the rest from a loan.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

In the Philippines, the government approved the proposed increase in the floor prices of flue-cured tobacco by grade effective for the 1985 trading season. The price increase was recommended by the Philippine Virginia Tobacco Administration (PVTA) after meeting with representatives of the farmers group, traders, and cigarette manufacturers. The floor prices of flue-cured tobacco follows:

Grade	1984 Pesos/kg	1985 Pesos/kg	Percent Increase
A	15	18	20
B	13	15.5	19
C	11.5	14	22
D	10	12	20
E	9.5	11.5	21
GR	6	7.5	25
PR	2	3	50

The price increase should improve farmers' income which has declined because higher in costs of cash inputs, such as fertilizer, pesticides, firewood, gasoline, oil, and labor. The move is also intended to protect the farmers from a possible price slump which may result if surplus production occurs in 1985.

PVTA has undertaken an intensive information drive advising Virginia tobacco farmers to decrease production by 30 percent from last year's level. Those farmers who cannot adopt the recommended technology and whose areas are either marginal or have a high salinity level are urged to discontinue planting Virginia tobacco as their produce would be least desired by the markets. Efficient farmers, on the other hand, are strongly encouraged to produce high quality tobacco intended primarily for the export market.

U.S. TOBACCO DEVELOPMENTS

U.S. Burley Auction Market Report: Sales on the U.S. burley auction market through the end of January 1985, totaled over 690 million pounds and averaged $1.88 per pound. Loan receipts during the period amounted to 193 million pounds, or 27.8 percent of the total sales.

Daily burley sales on January 31, 1985, reached 693 million pounds at an average price of $1.88. Loan receipts totaled 192.7 million pounds or 27.8 percent of gross sales for that day.

USITC Votes on Tobacco Section 22: The U.S. International Trade Commission, on February 1, 1985, found by majority vote of 4-1 that imports of tobacco were not certain to materially interfere with the programs administered by the Department of Agriculture. The Commission is scheduled to report its findings and recommendations to the President on February 11, 1985; the President is not bound by the Commission's findings.

The ITC investigation was initiated on September 7, 1984, when the President, acting upon advice from the Secretary of Agriculture, directed the U. S. International Trade Commission to make an immediate investigation under Section 22 of the Agricultural Adjustment Act of 1933 to determined whether imports were materially interfering with the tobacco price support and production adjustment programs administered by the USDA.

U.S. Tobacco Trade and Outlook - U.S. unmanufactured tobacco exports in calendar 1984 were 246,156 tons valued at $1.5 billion, an increase of 3 percent in volume and value from the 1983 level. Flue-cured tobacco exports accounted for most of the gain due to a higher quality crop in 1984. Japan was the largest market taking 41,784 tons, followed by West Germany, 29,929 tons; and Spain, 23,814 tons. Other major markets were Egypt (16,921 tons), United Kingdom (14,429) and Italy (14,175).

For December 1984, unmanufactured exports were 35,145 tons valued at $211 million, up 25 percent in volume and 23 percent in value from December 1983. Flue-cured tobacco accounted for 76 percent of total exports. Japan and Taiwan were the leading markets taking 13,976 tons and 8,083 tons, respectively.

Flue-cured tobacco exports during 1984 were 158,666 tons worth at $1.1 billion, up 13 percent in volume and 12 percent in value from the year earlier. Japan was the leading destination taking 30,877 tons, followed by West Germany (18,774 tons), and Spain (18,634 tons). December flue-cured exports were 26,568 tons valued at $186 million, an increase of 25 percent in quantity and 21 percent in value from December 1983. Japan and Taiwan took 71 percent of the months shipments.

Burley tobacco exports in 1984 were 33,380 tons worth at $242 million, a 19 percent decline in volume and value from 1983. Major markets were West Germany (5696 tons), Italy (5,337), and Japan (4,953). December burley exports were 1,639 tons valued at $12 million, up 145 percent in volume and 116 percent in value from December 1983.

Exports of other types (excluding flue-cured and burley) for 1984 were 54,110 tons valued at $182 million, a drop of 3 percent in volume and value. The category stems, trimmings, and scrap accounted for 69 percent of exports of other types. Dark fire-cured (Kentucky-Tennessee) tobacco exports decreased 28 percent to 6,433 tons. Maryland tobacco exports dropped 55 percent to 1,663 tons.

Cigarette exports for 1984 were 56.5 billion pieces ($1.12 billion), down 7 percent in volume from the 1983 level. The strong dollar is the major reason for the decline in U.S. cigarette exports. Leading markets during 1984 were Belguim-Luxembourg (11.2 billion pieces), Hong Kong (7.5 billion), Japan (6.3 billion), and Saudi Arabia (6.1 billion).

Unmanufactured tobacco imports for consumption (including, category "tobacco manufactured or not manufactured, not specially provided for") during 1984 were 188,757 tons valued at $558 million, 21 percent below the 1983 record level. The large imports during 1983 reflected heavy withdrawals of machine threshed leaf from bonded warehouses before the tariff reclassification in August 1983. Oriental leaf was the largest category during 1984 with 76,618 tons, followed by stemmed cigarette leaf with 41,821 tons. Leading sources of imports were Turkey (50,953 tons), Brazil (29,218), Greece (14,062), Italy (7,812) and Canada (7,264).

For December 1984, imports for consumption were 12,054 tons valued at $34.8 million, an increase of 11 percent in volume from December 1983. Oriental leaf imports totaled 4,515 tons, followed by stemmed cigarette leaf imports with 3,703 tons.

General imports (actual arrivals) of unmanufactured tobacco (including the category "tobacco manufactured or not manufactured, not specially provided for") during 1984 were 212,957 tons valued at $629.2 million, up 2 percent in volume from 1983. Oriental leaf imports were 80,100 tons, followed by other cigarette leaf at 68,352 tons.

General imports for December 1984 were 8,464 tons worth $17.6 million, a 43-percent drop from December 1983. Other cigarette leaf at 4,325 tons was the largest category.

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

U.S. unmanufactured tobacco exports during January 1985 declined 18 percent to 15,870 tons from January 1984. Flue-cured exports dropped 3 percent to 11,991 tons. Burley exports continued to lag, declining 44 percent to 1,299 tons. Cigarette exports during January 1985 increased 44 percent to 5.5 billion pieces compared to a year ago.

U.S. imports of leaf tobacco for consumption during January 1985 increased 5 percent to 14,727 tons. Oriental leaf and stemmed cigarette leaf were the largest import categories.

World Tobacco Highlights include:

- Hong Kong increases tax on imported tobacco.
- Japanese cigarette sales for January-December 1984 showed no change.
- Malaysia announces tobacco support prices.
- Canadian flue-cured tobacco sales total 76,360 tons.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

In Hong Kong, the government has announced a tax increase for imported tobacco. The new tax schedule is as follows:

	Old Rate HK$	New Rate Per Kg.	Percent Increase
Imported cigarettes	178	210	17.9
Imported leaves	131.4	170	29.4
Imported cigars	175	210	20.0
Chinese prepared tobacco	33	40	21.2
Other imported manufactured tobacco	140	170	21.4

The seven tobacco traders in Hong Kong decided there would be an equal rise in the price for both imported and locally manufactured cigarettes. The new retail price of cigarettes actually increased by HK$ 5.2, up from HK$ 4.5 per pack of 20 cigarettes. For imported brands, the new prices ranged from HK$ 7.2 to HK$ 8 per pack from the previous HK$ 6.5 to HK$ 7 range.

According to the Japan Tobacco and Salt Public Corporation (JTS), Japanese sales of cigarettes for December 1984 were up 2.6 percent from December 1983 to 32.2 billion pieces. For the January-December period, cigarette sales were up 0.2 percent to 312.5 billion pieces. Domestic cigarettes, which represented 98 percent of sales, were down 0.1 percent. The volume of imported cigarettes increased 16 percent to 6.4 billion pieces, representing 2 percent of the market. U.S. cigarettes accounted for 96 percent of imports.

Malaysia recently increased support prices for green and dry leaf tobacco by 7.4 and 13.6 percent, respectively. The average price of green tobacco was raised from M$.625 (US$.26) per kilogram to M$.671 (US$.28), and the dry leaf price raised from M$11.44 (US$.4.75) per kilogram to M$13.00 (US$5.39). The Government also indicated that it was changing the basis for the green leaf price. Formerly, the price was based on input costs and labor. The new system will take into account a 14-percent return to labor. The Government hopes that the increase will raise the incomes of 44,000 tobacco families and the 348 curers.

Competitive pressures may prevent manufacturers from increasing cigarette prices in the immediate future. Cigarette consumption has only recently recovered from the effects of the substantial 1982 tax increase. However, it is likely that the manufacturers will eventually pass on the additional costs to the consumer in the form of higher cigarette prices.

The government also announced an increase in the production quota from 8,500 tons last year to 10,500 tons. However, manufacturers doubt that the production level will be reached.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

In Canada, the Ontario Flue-cured Growers' Market Board reports 76,360 tons have been sold through February 15, 1985. The average price was C$3.22 (US$2.44) per kilogram. The target level for the Ontario crop was 77,111 tons. Southwestern Ontario usually accounts for about 90 percent of the total Canadian flue-cured tobacco production. The balance is grown in Quebec and the Maritime Region.

U.S. TOBACCO DEVELOPMENTS

Burley Auction Market Report: Auction sales of the 1984 U.S. burley crop through March 6, 1985, totaled over 714 million pounds and averaged $1.87 per pound. Loan receipts during the period amounted to 200 million pounds, or 28 percent of total sales.

The 1983 crop market closed on March 7, 1984, with total sales of 528.7 million pounds at $1.77 per pound. Almost one-half of the drought-strickened 1983 crop was purchased by the two burley associations.

Daily burley sales on March 6, 1985, totaled 411,000 pounds at an average price of $1.81 as clean-up sales continued. Loan receipts for the day totaled 117,000 pounds or about 29 percent of the sales.

Burley No-Net-Cost Assessment Announced: On March 6, 1985, USDA announced that the no-net-cost assessment for the 1985 burley tobacco crop would be set at 30 cents per pound. The 1984 assessment was 9 cents. The 21-cent hike was necessary to cover projected losses on the 1982 through 1985 crops. The two grower associations that administer the price support program currently hold over 500 million pounds of tobacco, taken from the 1982 through 1984 crops. The assessments are intended to ensure that the tobacco support program will operate at no net cost to taxpayers as required by the No-Net-Cost Tobacco Program Act of 1982.

Growers who elect not to pay the assessments will not be eligible for price support and will be subject to a penalty equal to 75 percent of the 1984 average market price for burley tobacco.

The price support for the 1985 burley crop will be announced at a later date. It is expected that the level will be increased 3 cents from the 1984 level to $1.751 per pound.

Flue-cured No-Net-Cost Assessment Set: On February 28, 1985, USDA announced that the no-net-cost assessment for the 1985 flue-cured tobacco crop would be 25 cents per pound, up 18 cents from the 1984 assessment. The hike was necessary to cover expected losses on the 1982 through 1985 crops. The Flue-Cured Tobacco Cooperative Stabilization Corporation (FCTCSC), which currently holds the largest inventory of tobacco it has held since 1965, recommended the 25-cent assessment The assessments are intended to ensure that the tobacco support program will operate at no net cost to taxpayers as required by the No-Net-Cost Tobacco Program Act of 1982.

Growers who elect not to pay the assessments will not be eligible for price support and will be subject to a penalty equal to 75 percent of the 1984 average market price for flue-cured tobacco.

The price support for the 1985 flue-cured crop will be $1.699 per pound -- the same as in 1984.

U.S. TRADE SUMMARY

U.S. Tobacco Trade and Outlook -- U.S. Unmanufactured Tobacco Exports during January 1985 were 15,870 tons valued at $97 million, a drop of 18 percent in volume and 14 percent in value from January 1984. The leading markets during January were Thailand (2,778 tons), West Germany (2,423 tons), Taiwan (1,519 tons), Italy (1,188 tons), and Denmark (821 tons).

Flue-cured tobacco exports during January 1985 were 11,991 tons valued at $72.9 million, down 3 percent in volume and 8 percent in value from January 1984. Major destinations for flue-cured exports were Thailand (2,777 tons), West Germany (2,169 tons), and Taiwan (1,451 tons).

Burley exports during January 1985 totaled 1,299 tons valued at $9.5 million, a fall of 44 percent in volume and 49 percent in value from January 1984. Indonesia was the leading market with 220 tons, followed by Egypt with 209 tons and Hong Kong with 206 tons.

Exports of other types during January 1985 were 2,580 tons valued at $14.6 million; a drop of 44 percent in volume from January 1984. Stems, trimmings, and scrap accounted for 76 percent of exports of other types.

Cigarette exports during January 1985 were 5.5 billion pieces valued at $111.8 million, an increase of 44 percent in volume and 55 percent in value from January 1984. Saudi Arabia was the largest market with 1.1 billion pieces, followed by Hong Kong with 986 million pieces and Belgium-Luxembourg with 506 million pieces.

Unmanufactured tobacco imports for consumption (duty paid) in January 1985 were 14,727 tons valued at $44.4 million, up 5 percent in volume from January 1984. Oriental was the largest category with 6,473 tons, followed by stemmed cigarette leaf with 4,481 tons and cigar leaf scrap with 1,129 tons. These three categories represent 82 percent of total imports for January.

General imports (actual arrivals) of unmanufactured tobacco during January 1985 were 12,540 tons valued at $28.5 million, a decline of 22 percent in volume from January 1984. Oriental leaf, which was the largest category, totaled 5,106 tons, followed by other cigarette leaf with 2,907 tons and cigar leaf scrap with 1,546 tons.

SPECIAL REPORT: U.S. Tobacco Trade - 1984

The favorable U.S. tobacco trade balance in 1984 rose 13 percent to $2.07 billion, resulting from a rise in unmanufactured tobacco exports and a decline in imports for consumption. Exports of unmanufactured tobacco and products expanded 2 percent to $2.7 billion, while imports for leaf and products for consumption dropped 22 percent to $636 million. Exports of leaf increased 3 percent in volume to 246,156 tons valued at $1.5 billion. Duty paid leaf imports were 188,757 tons valued at $558 million, a drop of 21 percent from the record 1983 level. Cigarette exports for 1984 were 56.5 billion pieces valued at $1.12 billion, declining 7 percent in volume from the 1983 level.

EXPORTS

Unmanufactured tobacco exports in 1984 were 246,156 tons valued at $1.5 billion, an increase of 3 percent in volume and value from the 1983 level. Flue-cured tobacco exports accounted for most of the gain due to a higher quality crop in 1984. Burley exports dropped 19 percent during 1984. Exports to Japan, the leading market for U.S. leaf during 1984, declined 19 percent to 41,784 tons, as result of lower burley shipments. Shipments to the European Community increased 4 percent. West Germany took 29,929 tons, rising 14 percent from a year earlier. Other major markets were Spain (23,814 tons), Egypt (10,921 tons), United Kingdom (14,429 tons), and Italy (14,175 tons).

U.S. flue-cured tobacco exports in 1984 were 158,666 tons, valued at $1.1 billion, up 13 percent in volume and 12 percent in value from the year earlier. Exports to Japan, the leading flue-cured market, rose 6 percent to 30,877 tons. After Japan, the leading markets were West Germany (18,774 tons), Spain (18,634 tons), United Kingdom (11,383 tons), and Taiwan (10,399 tons). The average export value of flue-cured in 1984 declined 1 percent to $6.85 per kilogram, compared to $6.91 in 1983.

Burley tobacco exports in 1984 were 33,380 tons valued at $241.7 million, a decline of 19 percent in quantity and value from 1983. West Germany was the leading market for burley exports with 5,696 tons, up 2.5 percent. Exports to Italy totaled 5,337 tons, a decline of 19 percent. Burley exports to Japan declined 59 percent to 4,953 tons. Shipments to the European Community dropped 6 percent. The average export value for burley tobacco in 1984 declined less than 1 percent to $7.24 per kilogram, compared to $7.28 per kilogram in 1983.

Exports of other types (excluding flue-cured and burley) in 1984 were 54,110 tons valued at $182 million, a drop of 3 percent in volume and value. Dark fire-cured (Kentucky-Tennessee) tobacco exports decreased 28 percent to 6,422 tons. Exports to the Netherlands were 4,481 tons, down 32 percent from 1983.

Stems, trimming and scrap exports were 37,100 tons valued at $6.1 million, up 8 percent in volume and 26 percent in value. Leading markets were Japan (5,953 tons), West Germany (4,416 tons), Denmark (3,988), and Egypt (3,836 tons).

Maryland-type tobacco exports in 1984 were 1,665 tons valued at $11.3 million, a drop of 55 percent in volume from 1983. Switzerland was the leading market with 1,663 tons, followed by West Germany with 480 tons.

Blackfat tobacco exports in 1984 totaled 1,122 tons valued at $7.9 million, an increase of 27 percent from 1983. Benin with (389 tons) and Nigeria with (351 tons) were the leading blackfat markets.

Cigarette exports for 1984 were 56.5 billion pieces ($1.12 billion), down 7 percent in volume from the 1983 level. The strong dollar is the major reason for the decline in U.S. cigarette exports. Shipments to Europe declined 10 percent, while those to Asia dropped 1 percent.

Belgium-Luxembourg, the leading market for U.S. cigarettes, dropped 14 percent to 11.2 billion pieces. The majority of the exports to Belgium-Luxembourg are transhipped to other countries. Other leading markets were Hong Kong (7.5 billion), Japan (6.3 billion), and Saudi Arabia (6.16 billion). Cigarette exports in 1984 to Japan increased 15 percent over 1983.

Cigar, cheroot, and cigarillo exports in 1984 were 103.9 million pieces valued at $7.6 million, a decline of 20 percent in volume from 1983. Leading markets were the United Kingdom (15.3 million pieces), West Germany (11 million), Japan (7.4 million), and Saudi Arabia (7.4 million).

Chewing tobacco and snuff exports in 1984 were 1,162 tons valued at $7 million, an increase of 8 percent in volume from 1983. Canada took 93 percent of chewing tobacco and snuff exports.

IMPORTS

Imports for Consumption

Unmanufactured imports for consumption, including the category "Tobacco manufactured or not manufactured, not specially provided for other" (NSPF), in 1984 were 188,757 tons valued at $558 million, a drop of 21 percent from the 1983 record level. The large imports during 1983 reflected heavy withdrawals of machine threshed leaf from bonded warehouses before the tariff reclassification in August 1983. Oriental leaf was the largest category in 1984 with 76,618 tons, a decline of 8 percent from the 1983 level. Stemmed cigarette leaf imports totaled 41,821 tons compared to 7,525 tons in 1983.

Major sources of imports during 1984 were Turkey (50,953 tons), Brazil (29,218 tons), Greece (14,062 tons), Italy (7,812 tons), and Canada (7,264 tons). Turkey was the leading Oriental supplier with 48,375 tons, followed by Greece with 12,989.

General Imports

Unmanufactured general imports including the category "Tobacco, manufactured or not manufactured, not specially provided for, other" (NSPF), in 1984 were 212,957 tons valued at $629 million, an increase of 2 percent in volume from 1983. Oriental leaf imports were 80,100 tons, followed by other cigarette leaf at 68,352 tons.

Leading sources of general imports in 1984 were Turkey (56,104 tons), Brazil (48,584 tons), Greece (14,997 tons), Italy (8,023 tons) and Canada (6,953 tons).

STOCKS OF FOREIGN-GROWN TOBACCO

Stocks of foreign-grown tobacco held by U.S. manufacturers and dealers on January 1, 1985, were 458,038 tons (farm-sales-weight equivalent), up 5 percent from January 1, 1984. Cigarette leaf, which made up 91 percent of foreign grown stocks, increased 6 percent. Flue-cured increased 12 percent to 119,831 tons, while burley rose 6 percent to 132,375 tons. Oriental leaf declined less than 1 percent.

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

U.S. unmanufactured tobacco exports during February 1985 were up 15 percent in volume to 22,252 tons valued at $142 million. Flue-cured tobacco exports accounted for most of the gain, increasing 40 percent to 13,760 tons. Burley exports remained depressed, dropping 16 percent to 5,463 tons. Cumulative unmanufactured tobacco exports for January-February 1985 were 38,122 tons valued at $238.9 million, down 2 percent in volume from a year ago. Burley exports were down 23 percent, while flue-cured tobacco exports jumped 16 percent. Cigarettes remain strong during the first two months of 1985, increasing 32 percent from year ago to 10.8 billion pieces valued at $220 million.

Leaf imports for consumption during February were 19,554 tons valued at $54.4 million, down 6 percent from February 1984. During January-February 1985, imports fell 2 percent to 34,283 tons valued at $98.8 million.

World Tobacco Highlights include:

-Japan's cigarette sales dropped during first two months of 1985.
-United Kingdom increases tax on cigarettes.
-West Germany tobacco consumption unchanged in 1984.
-Korean tobacco exports decrease 20 percent in 1984.
-Philippines set floor prices for burley tobacco.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Austria's leaf tobacco utilization during 1984 is estimated at 13,200 tons. Although consumption of tobacco products declined only 2 percent in 1984, leaf tobacco imports dropped 24 percent during the first 11 months. Most of the 8,300 tons imported came from Hungary, Brazil, Thailand, Bulgaria, West Germany, Poland, and the Philippines. The long term trend of decreasing tobacco imports from the U.S. continued last year. The U.S share, which accounted for 11 percent of total imports in 1983, declined to 5 percent in 1984.

At the beginning of 1984, stocks were already at a fairly low level. Because of small imports in 1984, tobacco inventories at the beginning of 1985 were further reduced. As result of low stock levels and an expected consumption rise, tobacco purchases are expected to increase during 1985.

Ecuador's total cigarette production has been estimated at 196.5 million packs during 1984, down 1.3 percent from the year earlier. Blond cigarettes accounted for 81 percent of production (84 percent in 1983), while black tobacco cigarettes accounted for 19 percent (15 percent in 1983). Domestic consumption of cigarettes has been

estimated at 188.6 million packs, with blond filter cigarettes accounting for 80 percent, blond non-filter for 7.3 percent, and black for 12.7 percent. An estimated 1 percent of consumption comes from clandestine imports, while about 6 percent of the country's production is considered as border sales that leave the country as contraband. According to industry sources, consumption trends favor the carbon-filter types over non-filter and black cigarettes. As a result of the almost yearly price increases decreed by the government, the trend is towards more consumption of domestic brands instead of international brands because of substantially lower prices.

Cigarette production taxes and prices were increased in January 1984, and are expected to increase again during the first quarter of 1985. The new increases are considered necessary by the government in order to increase tax revenues to partially cover the government's budget deficit.

In Hong Kong, the British Medical Council (BMC) called for a ban on television and radio advertising for cigarettes at the broadcasting review board public hearings. According to news reports, the BMC's president told the board that there is a close correlation between smoking and chronic diseases such as lung cancer, bronchitis, and heart ailments. He suggested that the requirement that cigarette labels carry the warning that"smoking is hazardous to health" be expanded to include a similar audio warning to attract greater public attention.

According to the Japan Tobacco and Salt Public Corporation (JTS), Japanese cigarette sales for February 1985 were down 1.5 percent from February 1984 to 22.3 billion pieces. For the January-February period, cigarette sales were down 1.5 percent to 42.9 billion pieces. Domestic cigarettes, which represent 97.5 percent of sales, were down 1.8 percent. The volume of imported cigarettes increased 13.7 percent to 1.1 billion. U.S. cigarettes accounted for 96 percent of imports.

Malaysia may increase leaf imports in 1985 due to a short crop. The three manufacturers were counting on increased supplies from this year's crop to offset the reduced availabilities from the short 1984 crop. If the 1985 crop comes in at only 5,700 tons, additional imports will be necessary. It is likely that a large part of the extra imports will be from the United States. Total U.S. exports of tobacco in 1984 to Malaysia were up 25 percent due to the reduced 1984 crop. Because of the recent flood and prospects of reduced local supplies, U.S. exports to Malaysia should remain strong.

The United Kingdom government raised the specific tax rate on cigarettes from 24.9 pounds per 1000 to 26.95 pounds per 1000. The specific tax rate on hand rolling cigarette tobacco was raised from 40.60 pounds per kilogram to 43.73 pounds per kilogram. The tax rate on cigar tobacco was not changed. The new tax rate, which became effective at midnight March 21, 1985, increased the retail price of a pack of cigarettes from 1.30 to 1.35 U.K. pounds.

West Germany's leaf tobacco consumption in 1984 is estimated to have remained at the 1982 and 1983 level of about 135,000 tons. The use of U.S. tobacco dropped by about 1,000 tons (down 3.3 percent), due to the comparatively high U.S. prices. Arrival statistics for 1984 U.S. flue-cured shipments to West Germany were up 13 percent, while burley shipments dropped 9 percent.

The confusion on the German cigarette market caused by the steep tax increase in 1982 has disappeared. Price is no longer being used as an agressive marketing instrument as in 1983. Traditional cigarette brands are regaining market shares, which had been lost to generics.

WORLD DEVELOPMENT AFFECTING TOBACCO SUPPLY

In India, slack demand and excessive supplies created marketing problems for flue-cured tobacco growers in Audhra Pradesh in 1984, especially during the post-harvest months. However, unlike 1983, no price support measures were undertaken by the State Trading Corporation of India or any other state agency because of large unsold inventories lying with State Trading Corporation from its previous year's purchases. The average price of flue-cured tobacco received by growers in Audhra Pradesh during 1984 is estimated at Rs. 9.00 (US $0.73) per kilogram, compared to Rs. 8.81 in 1983.

In order to ensure smooth marketing and renumerative prices for growers, the Tobacco Board introduced the compulsory auction system of marketing for the 1984/85 flue-cured crop in Karnataka in September 1984. The flue-cured crop in Karanataka is harvested during August and September. As a result, the average grower price increased from Rs. 8.81 per kilogram in 1983 to Rs. 14.19 (US$1.22) in 1984. Encouraged by the Karanataka experience, the Tobacco Board has decided to open 20 auction platforms during February-March 1985 in Audhra Pradesh for flue-cured sales. Auction sales in Audhra Pradesh, which is India's principal flue-cured producers' state, is expected to benefit about 45,000 farmers who grow registered flue-cured under the Tobacco Board.

Korean exports of leaf tobacco in 1984 decreased 20 percent to 26,000 tons valued at $84 million. Export performance was affected by depressed overseas demand and delay in setting the export price for 1984 crop. The United States took about one-quarter of Korea's tobacco exports valued at $21 million. Korea made no tobacco purchases from the United States for the second year in a row. The Office of Monopoly (OM) has a small amount of U.S. leaf still on hand from tobacco purchased in 1981, and continues to maximize the use of local tobacco in its cigarette brands. Cigarette exports in 1984 were valued at $10 million, with most sales in the Middle East. OM's forecast for leaf exports in 1985 is 30,000 tons, up about 12 percent from 1984.

The Government of Philippines increased the floor prices for burley tobacco effective March 1, 1985. The increase was based on the recommendation of the Philippine Viginia Tobacco Administration (PVTA) in response to appeals by burley tobacco farmers, traders and cigarette manufacturers because of rising production costs. The new prices follows:

Burley Tobacco Floor Prices
(Pesos Per Kilogram)

Grade	Air-cured		Semi air-cured		Sun cured

Yugoslavia's production of cigarettes in 1984 totaled 58,439 million pieces, compared to 58,941 million pieces in 1983. During 1983, the industry used 56,863 tons of domestic fermented leaf and 2,303 metric tons of imported fermented leaf. Most tobacco used by manufacturers was for cigarette production. Per capita consumption of cigarettes in 1983 increased to 2,555 cigarettes, compared to 2,270 cigarettes in 1982.

In October 1984, the government of Yugoslavia announced the 1985 producer-selling prices, which increased to 360 dinars (US$1.84) per kilogram, compared to the 1984 price of 209.2 dinars (US$1.07) per kilogram. This represents a 72 percent increase. In response to these higher prices, the government expects that the 1985 tobacco plantings will be increased to an estimated 80,000 tons from an area of 60,000 hectares. The higher 1985 producer price will be an incentive to the tobacco export trade, since tobacco has traditionally been an excellent hard currency earner for the Yugoslavia economy.

Total Yugoslavia exports of unmanufactured tobacco in 1983 were a record of 28,147 tons valued at $107.2 million. Imports of leaf tobacco in 1983 totaled 8,138 tons, valued at $18.8 million. The main buyers of Yugoslavia leaf tobacco in 1983 were the United States (7,308 tons), Czechoslovakia (5,551 tons), Soviet Union (5,095 tons), Egypt (2,430 tons), East Germany (1,524 tons), and Switzerland (1,488 tons). Exports in 1984 are expected to be significantly lower. Exports of leaf in the first 11 months of 1984 reached only 15,000 tons, compared to 22,000 tons in the same period in 1983.

Imports of leaf in 1984 fell to 7,350 tons, compared to 8,138 tons in 1983. Imports of flue-cured tobacco from the United States in 1984 expected to totaled only 350 tons, compared to 863 tons in 1983. The main reasons for the drop in imports have been a lack of foreign exchange and a continued expansion of domestic flue-cured plantings.

U.S. TOBACCO DEVELOPMENTS

Burley Auction Market Report - Burley auction sales of the 1984 crop closed March 12, 1985, with 715.3 million pounds being sold at an average price $1.87 per pound. Loan receipts totaled 200.3 million pounds, or 28 percent of total sales.

Sales of the 1983 crop closed March 7, 1984, with 528.7 million pounds being sold at an average price of $1.77 per pound. Loan receipts equaled 48.3 percent of sales.

U.S. TRADE SUMMARY

U.S. Tobacco Trade and Outlook - U.S. unmanufactured tobacco exports during February 1985 were 22,252 tons valued at $142 million, an increase of 15 percent in volume and 8 percent in value from February 1984. Flue-cured tobacco accounted for 62 percent of shipments, while burley tobacco share was 25 percent. Leading markets were West Germany (4,224 tons), Italy (3,608 tons), Spain (3,260 tons), and Thailand (2,564 tons).

For the January-February period exports were 38,122 tons valued at $238.9 million, a drop of 2 percent in volume and value from the same period in 1984. Flue-cured tobacco exports were up 16 percent for the period, while burley exports dropped 23 percent. West Germany was the leading market with 6,647 tons, followed by Thailand with 5,342 tons, Italy with 4,796 tons, and Spain with 3,965 tons.

Flue-cured tobacco exports for February 1985 were 13,760 tons valued at $90.3 million, a jump of 40 percent in volume from February 1984. For the January-February period, flue-cured exports were 25,751 tons valued at $163 million, an increase of 16 percent in volume from 1984. Leading destinations for flue-cured exports were Italy (4,120 tons), Thailand (3,934 tons), West Germany (3,449 tons), and Spain (3,344 tons).

Burley tobacco exports for February 1985 were 5,463 tons valued at $39 million, down 16 percent in volume from February 1984. During the January-February period, burley exports were 6,762 tons valued at $48.5 million, a drop of 23 percent in quantity and 29 percent in value from last year. West Germany was the leading market with 2,870 tons, followed by Thailand with 1,407 tons.

Exports of other types (excluding flue-cured and burley) during January-February 1985 were 5,609 valued at $27 million, a decline of 27 percent from the same period in 1984. Stems, trimmings and scrap accounted for 74 percent of exports of other types.

Cigarette exports during February 1985 were 5.3 billion pieces valued at $108 million, an increase of 22 percent in volume from February 1984. For January-February 1985, cigarette exports were 10.8 billion valued at $220 million, a jump of 32 percent in volume and 42 percent in value from the same period in 1984. Hong Kong was the leading market with 1.96 billion pieces, followed by Saudi Arabia with 1.9 billion pieces, Belgium-Luxembourg with 1.3 billion pieces and Japan with 1.1 billion pieces.

Unmanufactured tobacco imports for consumption (duty paid) for February 1985 were 19,554 tons valued at $54.4 million, a drop of 6 percent in volume from February 1984. Oriental leaf imports totaled 8,035 tons, up 10 percent from February 1984. The large drop in imports came in the category stemmed cigarette leaf which fell 27 percent to 4,834 tons.

For January-February 1985 imports for consumption were 34,281 tons valued at $98.8 million, down 2 percent in volume from last year. Oriental leaf was the largest category with 14,508 tons, an increase of 10.5 percent from a year ago. Stemmed cigarette leaf imports were 9,315 tons, up 10 percent from the same period in 1984.

General imports (actual arrivals) of unmanufactured tobacco for February 1985 were 25,459 tons valued at $65.6 million, up 1 percent from February 1984. Oriental leaf imports totaled 15,096 tons, down 19 percent from a year ago. The category "other cigarette leaf" was the next largest with 2,934 tons, up 44 percent from February 1984.

During January-February, general imports were 37,997 tons valued at $94.1 million, down 8 percent in volume from a year. Oriental leaf imports dropped 28 percent to 20,202 ton. Other cigarette leaf imports increased 36 percent to 5,841 tons.

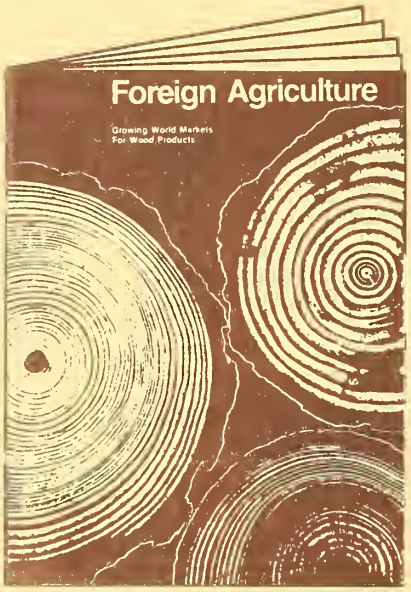
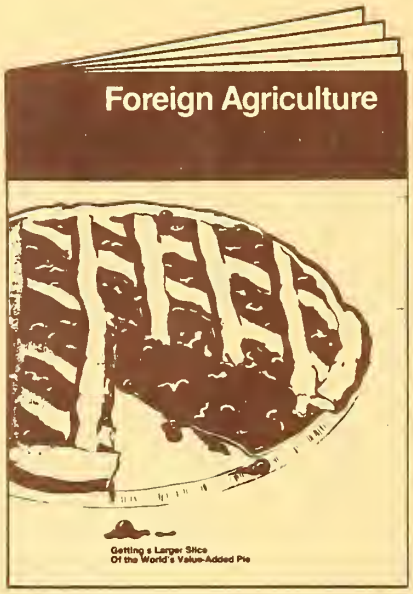
COMMODITY PROGRAMS, FAS, USDA





Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture's** telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture.**

Subscribe today! Just $16.00 ($20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

U.S. Tobacco Developments

U.S. Trade and Outlook Summary.....5
U.S. Tobacco Trade Statistics, March 1985.....7

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

U.S. unmanufactured tobacco exports during March 1985 were up 10 percent in volume to 21,877 tons valued at $146 million. Burley exports accounted for most of the gain, increasing 65 percent from March 1984. Flue-cured tobacco exports declined 22 percent from a year ago. Cumulative unmanufactured tobacco exports for January-March 1985 were 59,999 tons valued at $385 million, an increase of 2 percent. Burley exports were up 15 percent for the first 3 months of 1985, while flue-cured exports were up 5 percent. Cigarette exports remain strong, increasing 26 percent from a year ago.

Unmanufactured tobacco imports for consumption during March 1985 declined 32 percent from March 1984. During January-March, imports were off 12 percent from a year ago.

World Tobacco Highlights include:

-In Japan, the Japan Tobacco Inc., a Government-owned corporation, was Inaugurated.
-The Netherland's cigarette consumption declined in 1984.
-The Soviet Union's stocks are up in 1985.
-United Kingdom's tobacco consumption declines in 1984.
-India's tobacco crop down 16 percent in 1984.
-Thailand raised cigarette import duty.
-Zimbabwe's tobacco auction prices are higher in 1985.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

In Japan, on April 1, 1985, the Japan Tobacco Inc. (JTI) was inaugurated as a Government-owed corporation, replacing the Japan Tobacco and Salt Public Corporation (JTS), a Japanese Government monopoly. As a result of this reorganization, it is expected that the liberalization of tobacco products in Japan will lead to an increased market share for imported cigarettes. Once cigarette importers have established their own marketing systems, imported cigarettes are expected to take about 5 percent of the Japanese cigarette market.

In the Netherlands, domestic consumption of cigarettes is estimated to have fallen in 1984 by 15 percent compared to 1983. Since 1980, per capita consumption of cigarettes plunged from 1,575 to 1,162 pieces in 1984. Decreasing incomes, 38-percent higher cigarette prices, and health issues are the major reasons for this development.

According to the U.S. agricultural attache in Pakistan, the 1985 tobacco crop is forecast at 84,450 tons, up 21 percent from last year's revised crop estimate of 70,080 tons. This will cause a forecasted 45-percent increase in ending stock levels over 1984 figures, as cigarette production is projected to decrease slightly during 1985.

Based on reports from the U.S. agricultural counselor in the USSR, the 1985 tobacco crop is forecast at 365,500 tons, 5 percent below the record 1983 crop of 385,000 tons and 1 percent below the bumper 1984 crop. Should a crop of this magnitude materialize, it will be the country's third largest tobacco crop. This has caused a marked increase in stock figures, from 7,000 metric tons at year end 1983 to over 47,000 metric tons projected for year end 1985. While reducing the Soviet need for imports, and increasing their export levels, this development will have little impact on U.S trade, as 95 percent of Soviet tobacco production is of the Oriental variety, a type not grown in the United States.

Sweden's cigarette consumption in 1984 dropped from 11.6 to 11.5 billion pieces, and cigar and cigarillo consumption decreased from 125 to 119 million pieces. Smoking tobacco consumption increased from 1,510 tons to 1,740 tons. All of this increase was roll-your-own tobacco. Snuff consumption rose from 4,029 tons to 4,333 tons.

On December 3, 1984, taxes on cigarettes were increased by 7 percent and on smoking tobacco and snuff by 9 to 10 percent. In addition, the Swedish Tobacco Company increased its prices slightly. Large purchases in November by the wholesale and retail trade in anticipation of the price increase may explain the large increase in smoking tobacco and snuff consumption and also why cigarette consumption decreased only 1 percent.

In the United Kingdom, tobacco consumption declined again in 1984 across the whole range of products. Cigarette consumption dropped by 2.5 percent, cigar consumption declined by 3 percent, pipe tobacco consumption was down by 3 percent, and hand-rolling tobacco consumption was down by 8 percent. The government tax policy on tobacco continues to be the major factor in the decline of consumption, although health considerations are important and are expected to adversely affect tobacco consumption in the future.

An important feature in the United Kingdom cigarette market is the entrance of store brand cigarettes marketed by supermarkets and smaller retail chain stores. These cigarettes are imported from continental manufacturers and their market share has expanded rapidly during the last 18 months.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

According to the U.S. agricultural attache in India, the 1984 tobacco crop is estimated at 497,100 tons, 16 percent below the previous year's output due to a 12-percent area decrease. The government restricted output in an effort to avoid excessive supplies and to keep tobacco prices at remunerative levels. A 26-percent decline occurred in the flue-cured tobacco area which represents about 25 percent of the crop. However, the dark air-cured tobacco area, which accounts for nearly 72 percent of total output, registered a slight increase. Aside from government imposed restrictions, unfavorable weather conditions in some tobacco producing states and diversion of tobacco area to cotton and oilseed crops also contributed to reduced output.

South Korean stock levels of flue-cured tobacco are equal to nearly 4 years of consumption. It is likely that the Office of Monopoly will continue to carry these high stocks, unless it cuts back production sharply or increases leaf exports. Neither is likely, due to the political problems associated with steep production cutbacks and world market conditions. Burdened by large stocks, the Office of Monopoly has further cut the targeted planted area for this year's crop some 6 percent from last year's 38,819 hectares to 36,500 hectares for 1985. The office has set a target of 34,000 tons for export, which appears, given current world market conditions, to be optimistic.

The Malawi tobacco auction opened the week of April 19, 1985. During the first week of sales, 513 tons of flue-cured tobacco were sold at an average price of 1.87 kwacha (U$1.28) per kilogram and 457 tons of burley were sold at average price of 215 kwacha (US$1.47) per kilogram. Sales for all types were 971 tons at total value of 1,049,423 kwacha (US$717,700).

According to the U.S. agricultural officer in Sao Paulo, the 1985 Paraguay tobacco crop is forecast at 9,900 tons, 51 percent below the previous year's revised crop estimate of 20,000 tons due to a 56-percent area decrease. Farmers shifted from tobacco to cotton as a result of excellent producer returns in 1984. The dark air/sun cured tobacco area, which accounts for over 90 percent of total tobacco production, registered a 61-percent decline.

The Government of Thailand recently increased the import duty on cigarettes. The new tariff is the higher of 30 percent or 30 Baht/kg. The previous duty was the higher of 20 percent or 25 Baht/kg. plus 5 percent of the c.i.f. value. Based on the average unit value during 1984 the new duty would be 145.34 Baht/kg. versus 109.63 Baht/kg. under the old system. U.S. cigarette exports to Thailand are relatively small but U.S. manufacturers have been attempting to gain freer access to this market. U.S. trade statistics indicate that 1984 shipments were valued at $125,000, down from $403,000 in 1983.

According to the agricultural attache in Turkey, the 1984 tobacco crop is estimated at 191,000 tons, 18 percent below the previous year's output due to a 6-percent area decrease. Oriental tobacco accounts for over 95 percent of the crop. Farmers planted less tobacco because of unfavorable support prices. The sharp decline in output is also attributed to dry weather conditions during the growing season. The quality of this year's crop is reportedly better than last year when unfavorable weather conditions during the growing period adversely impacted quality.

Zimbabwe Tobacco Prices Higher - First-day tobacco prices were excellent as the tobacco auction in Zimbabwe opened April 10 to begin selling the 1985 crop. First-day prices, which are considered a forecast for the season, averaged Z$2.36 (U.S.$1.56) per kilogram up from Z$1.41 (U.S.$1.23) day last year, a reflection of better average quality.

Revenues from tobacco exports reached a total of Z$282 million in 1984. According to the Zimbabwe Tobacco Association, export revenues this year should well exceed Z$300 million on a crop of 115-119 million kilograms.

U.S. TRADE DEVELOPMENTS

U.S. TRADE SUMMARY

U.S. Trade and Outlook Summary- U.S. unmanufactured tobacco exports during March 1985 were 21,877 tons valued at $146 million, an increase of 10 percent in volume from March 1984. Burley exports accounted for 51 percent of the total, while the flue-cured share was 33 percent. Major markets were Japan (4,841 tons), West Germany (4,635 tons), Switzerland (2,135 tons), and Spain (1,583 tons).

For the January-March 1985 period, exports were 59,999 tons valued at $385 million, up 2 percent in quantity from the same period in 1984. West Germany was the leading market with 11,282 tons, followed by Italy (5,778 tons), Spain (5,548 tons), Thailand (5,342 tons), and Japan (4,955 tons).

Flue-cured tobacco exports during March 1985 were 7,191 tons valued at $48 million, a drop of 22 percent in volume from March 1984. For January-March 1985, flue-cured exports were 32,941 tons valued at $211 million, an increase of 5 percent over the same period last year. Leading destinations for flue-cured exports were Italy (4,874 tons), Spain (4,513 tons), West Germany (4,431 tons), and Thailand (3,934 tons).

Burley exports rebounded in March, increasing 65 percent in volume to 11,157 tons valued at $86 million. During January-March 1985, burley exports were 17,920 tons valued at $134.5 million, up 15 percent in volume from a year ago. West Germany was the leading market with 6,122 tons, followed by Japan (4,841 tons), Switzerland (1,769 tons), and Thailand (1,407 tons).

Exports of other types (excluding flue-cured and burley) during January-March 1985 were 9,138 tons valued at $39 million, a drop of 21 percent in volume from the same period in 1984. Stems, trimmings, and scrap accounted for 76 percent of exports of other types.

Cigarette exports during March 1985 were 5.65 billion pieces valued at $114 million, an increase of 16 percent in quantity from March 1984. For January-March 1985, cigarette exports were 16.4 billion valued at $333.9 million, a jump of 26 percent in volume from the same period in 1984. Belgium-Luxembourg and Hong Kong were the leading market with 2.6 billion pieces each, followed by Saudi Arabia (2.1 billion pieces) and Japan (1.4 billion pieces).

Unmanufactured tobacco imports for consumption (duty paid) for March 1985 were 12,418 tons valued at $40 million, a drop of 32 percent in volume from March 1985. Oriental leaf imports were 5,873 tons, down 23 percent from March 1984. Stemmed cigarette leaf imports were 2,930, down 27 percent from a year ago.

For January-March 1985, imports for consumption were 46,699 valued at $139 million, down 12 percent in volume from a year ago. Oriental leaf totaled 20,381 tons, while stemmed cigarette leaf imports were 12,245 tons.

General imports (actual arrivals) of unmanufactured tobacco for March 1985, were 7,982 tons valued at $22 million, a drop of 52 percent in volume from March 1984. Oriental leaf imports were 2,101 tons, down 71 percent from a year ago. Other cigarette leaf imports were 2,260 tons, a drop of 44 percent from March 1984.

During January-March, general imports were 45,980 tons valued at $116 million, declining 21 percent from a year ago. Oriental leaf imports dropped 37 percent to 22,303 tons. Other cigarette leaf imports decreased 3 percent to 8,101 tons.

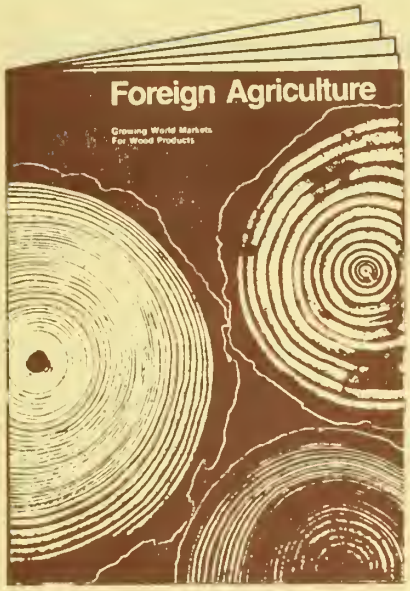
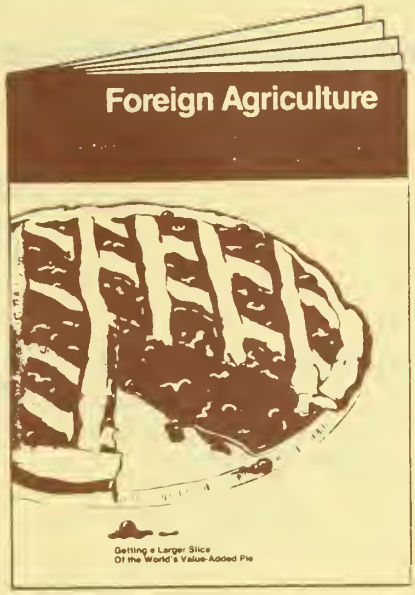
MAY 1985 COMMODITY PROGRAMS, FAS, USDA





Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture**'s telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture.**

Subscribe today! Just $16.00 ($20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

PROCUREMENT SECTION
CURRENT SERIAL RECORDS

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World unmanufactured tobacco production in 1985 is projected to be down 1 percent from last year's level to 6.3 million tons. Flue-cured tobacco production in 1985 is forecast at 3.1 million tons, slightly below the 1984 crop. World burley production in 1985 is forecast at 688,000 tons, a drop of 8 percent from last year. World oriental production in 1985 is forecast slightly above the 1984 crop.

U.S. leaf tobacco exports in April were up 64 percent from April 1984 to 24,623 tons. Burley exports accounted for 50 percent of April shipments, while the flue-cured share was 34 percent. Cumulative exports for January-April were 84,621 tons, up 15 percent from last year. Burley exports increased 67 percent, while flue-cured exports were about the same level.

World Tobacco Highlights include:
-Australia's sale of tobacco products remain constant.
-China's cigarette production up in 1984.
-France's tobacco consumption continues to drop.
-Argentina's tobacco exports decline.
-India's leaf export drop in 1984.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Australia's sale of tobacco products during 1984 remained nearly constant with those in 1983. There exists in Australia a very strong anti-smoking lobby. The Tobacco Institute of Australia, in an attempt to counter the influence of the anti-smoking groups, in October 1984 began publishing a news-sheet entitled" Tobacco Australia", to be issued six times a year. According to the publishers, "Tobacco Australia will present information and comments on issues of interest to the tobacco industry and to those millions of Australians who cherish their right to enjoy a cigarette."

Belgium cigarette production declined an additional 1.4 percent in 1984, with domestic consumption falling 11 percent. This significant and continuing decline is attributed to a further decline in domestic consumption coupled with reduced "border sales", mostly to West Germany. Smaller domestic consumption is essentially due to higher retail prices and the growing effects of reduced net disposable income. More Belgium cigarette smokers have shifted to "roll-your-own" cigarettes. Other smokers, mainly above the age of 45, have reduced their smoking or given it up entirely. Manufactured cigarette cost over double the price of this home made variety.

In China, cigarette production in 1984 grew 9.6 percent over 1983 to 1,062 billion pieces, and a growth rate of close to 9 percent is expected in 1985. The strongest growth area continue to be in filter cigarettes which expanded by 20 percent in 1984. The overall rate of production expansion has tapered off from 1980 and 1981 when expansion averaged 14 percent each year. Cigarette production in the first two months of 1985, however, increased 28 percent over the same period last year.

A national effort to improve cigarettes produced has included the importation of machinery, especially rolling machines, for selected factories around China.

The China Daily estimates that 300 million people in China smoke. In spite of a moderate anti-smoking campaign sales of cigarettes increased by 10 percent in 1984 and are expected to climb another 5-10 percent in 1985. The increase in sales is primarily, in the rural area. Rural incomes are increasing and are reflected in increased sales.

Denmark imported nearly 16,000 tons of unmanufactured tobacco in 1984, 11 percent more than in 1983. Leaf imports from the United States were slightly below the 8,500 tons imported in 1983. U.S. share of the 1984 total was 53 percent. Imports from GSP countries, mainly Brazil, amounted to 2,745 tons.

Domestic cigarette production increased by 7 percent to 10.5 billion pieces and exports increased by 15 percent to 1.9 billion pieces. Cigarette imports were down nearly 30 percent to 179 million pieces, but imports from the United States amounted to 12.1 million pieces, up from 2.8 million pieces in 1983. Domestic cigarette consumption increased 3 percent.

In Egypt, the single company which is now the Egyptian tobacco industry, is in a turnaround after years of heavy losses and subsidies. A 28 percent cigarette price in increase last fall finally allowed the Eastern Tobacco Company to sell above its costs of production. While a severe shortage of foreign exchange is limiting imports, productive capacity is now more than adequate to meet strong local demand, and the regional export market appears promising. Production of western cigarette brands in Egypt ispending on a fee basic, which will, however, result in a halt to cigarette imports. U.S. tobacco is highly desired in Egypt. However, price is limiting factor and U.S. leaf exports will continue to depend on credit sales.

In France, tobacco consumption in 1984 by Seita, the French monoply, continued to drop, as a result of the further decline in sales of dark cigarettes, which traditionally account for most of Seita's production. Seita's tobacco imports rose 4 percent to 37,100 tons, with higher purchases of all types of tobacco, except dark leaf. Imports of flue-cured and burley from the United States fell 37 percent to 820 tons because of the strong dollar.

French cigarette consumption rose 2 percent to 91.2 billion pieces in 1984. The reduction in Seita's share of the French market slowed down following the successful launching of a new American-type cigarette manufactured in France. In 1984, American-type cigarettes, most of which were imports, accounted for 47 percent of cigarette consumption, compared to 43 percent in 1983.

In West Germany, traditional cigarette brands in 1984 regained market shares at the expense of generics and low priced brands. The substitution of cigarettes by fine cut tobacco for "roll-your-own" cigarettes was reversed. The trend to stronger American blend type cigarettes continued. Cigarette manufacturers are now launching 100mm versions of their best selling traditional brand. Some companies have already announced their intention of increasing cigarette prices by 4 to 5 percent in August 1985. Despite the steady sales of cigarettes in Germany, the industry faced increasing input and production costs which required labor and inventory cuts in some companies. While tobacco imports rose by 1.5 percent, the value of these purchases went up by 15 percent. Consequently, storage of tobacco was reduced to about a 14- month supply, and the tendency for further reductions.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

Argentina's exports of unmanufactured tobacco in 1984 was 24,943 tons valued at $43 million. This is below the previous year's high level because of declines in burly and dark air-cured shipments. West Germany was the largest tobacco purchaser with 19 percent of shipments followed closely by the United States, also with 19 percent of shipments. Other large purchasers included the Netherlands, Columbia, and France. Exports in 1985 are expected to decline to about 20,000 tons, as result of the lower tobacco output in 1985. The tobacco export tax has recently been reduced to 9 percent of FOB value.

In Columbia, cigarette production decreased in 1984, as there has been a strong drift of consumer's taste toward light leaf cigarettes. However, the increase in light cigarette production in 1984, was the result of the ban on cigarette imports. Cigarette prices showed an increase during 1984. Prices for imported light leaf cigarettes are double those for equivalent local brands. As result of the cigarette import prohibition, legal cigarette imports are low. Nevertheless contraband has increased, and although it comes from Venezuela and the Dutch Antilles, it originates in the United States.

India's exports of unmanufactured tobacco during 1984 totaled 80,687 tons valued at RS 1,677 million ($148 million), down 3.4 percent in quantity and 1 percent in value from the 1983 level. Reasons for the decline include increased competition from other exporting countries, weak demand and reduced purchases by the United Kingdom and the U.S.S.R., which are the two largest customers of Indian tobacco. Exports in 1985 are not expected to show any substantial improvement and are currently forecast at around 85,000 tons because of large overseas supplies and a continuation of sluggish demand.

U.S. TOBACCO DEVELOPMENTS

U.S. TRADE SUMMARY

U.S. Tobacco Trade Outlook-U.S. unmanufactured tobacco exports during April 1985 were 24,623 tons valued at $164 million, an increase of 64 percent in volume from April 1984. Burley tobacco accounted for 50 percent of April shipments, while flue-cured share was 34 percent. Japan was the major destination during April taking 5,551 tons, followed by Italy with 3,803 tons, West Germany with 2,071 tons, and Spain with 2,058 tons.

For the January-April 1985 period, exports were 84,621 tons valued at $549 million, up 15 percent in volume and 18 percent in value from last year. The leading markets were West Germany (13,353 tons), Japan (10,506 tons), Italy (9,581 tons) and Thailand (7,899 tons).

Flue-cured tobacco exports during April 1985 were 8,363 tons valued at $53.5 million, a drop of 14 percent from April 1984. For January-April 1985, flue-cured tobacco exports were 41,304 tons valued at $265 million, about the same level as in 1984. Spain was the leading market with 6,059 tons, followed by West Germany with 5,735 tons, Italy with 5,183 tons, and Thailand with 5,091 tons.

Burley tobacco exports continued strong in April, totaling 12,242 tons valued at $89 million, compared to 2,459 tons exported in April 1984. For January-April 1985, burley exports were 30,162 tons valued at $224 million, a jump of 67 percent in both volume and value from the same period in 1984. Japan was the leading market with 10,049 tons, followed by West Germany with 6,820 tons,and Italy with 3,997 tons.

Exports of other types (excluding flue-cured and burley) during January-April 1985 were 13,155 tons valued at $60 million, a drop of 9 percent in volume from the same period in 1984. Stems, trimmings and scrap accounted for 68 percent of exports of other types.

Cigarette exports during April 1985 were 2.99 billion pieces valued at $60 million, a decline of 41 percent in volume from April 1984. For January-April 1985, cigarette exports were 19.4 billion pieces valued at $394 million, up 7 percent in volume from last year's level. Belgium-Luxembourg and Hong Kong were the leading markets with 2.9 billion pieces, followed by Saudi Arabia with 2.8 billion pieces, and Japan with 1.75 billion pieces.

Unmanufactured tobacco imports for consumption (duty paid) for April 1985 were 14,887 tons valued at $44 million, an increase of 17 percent in volume from April 1984. Oriental leaf imports rose 31 percent to 7,487 tons, while stemmed cigarette leaf imports were up 31 percent to 3,036 tons. For January-April 1985, imports for consumption were 61,586 tons valued at $183 million, down 7 percent in volume from a year ago. Stemmed cigarette leaf imports were 15,280 tons, while oriental leaf imports were 27,868 tons.

General imports (actual arrivals) of unmanufactured tobacco for April 1985, were 18,502 tons valued at $60 million, a drop of 8 percent in quantity from April 1984. Oriental leaf import accounted for 62 percent of the total, while other cigarette leaf accounted for 15 percent. During January-April, general imports were 64,482 tons valued at $175.5 million, down 18 percent from the same period in 1984. Oriental imports were 33,839 tons declining 25 percent, and other cigarette leaf imports were 10,895 tons, a drop of 24 percent.

Special Report: World Tobacco Production

World total unmanufactured tobacco production in 1985 is forecast at 6.3 million tons, 1 percent below last year's crop and 9 percent below the record 6.9 million ton crop produced in 1982. The tobacco crop in China, the world's largest producer, is estimated at 1.8 million tons, 7 percent above last year's crop but 19 percent below the record level of 2.2 million tons achieved in 1982. Tobacco production in China has been difficult to stabilize due to favorable grower prices and substantial tax revenues local governments receive for the sale of tobacco to factories. However, quality problems still persist despite measures to produce more medium and high quality leaf. To further promote the production of high quality tobacco, the price paid for top quality tobacco is expected to increase by about 20 percent.

Other major tobacco-producing countries with sizable crop increases include Indonesia, Colombia, Pakistan, South Africa, Bulgaria, Yugoslavia and Mexico. However, smaller crops are expected in the Philippines, Argentina, Japan, Canada, the Republic of Korea, Zimbabwe, Brazil, the Soviet Union and Greece. In the United States, production is projected to fall due to large carryover stocks and lower domestic use.

The 1985 world flue-cured tobacco crop is forecast at 3.1 million tons, slightly below last year's crop. Although production is expected to fall in the United States, output in China, the world's largest producer, is expected to be up 9 percent as a result of attractive prices. Flue-cured tobacco continues to represent nearly 85 percent of total output in China. In Canada, the 1985 flue-cured crop is expected to fall 10 percent. The recently created National Flue-cured Tobacco Marketing Agency is expecting legislative authority to enforce strict production controls. Production is also expected to fall this year due to weak domestic and export demand.

Price levels for flue-cured tobacco are determined by the general market price established between the Ontario Flue-cured Tobacco Grower's Marketing Board (OFCTGMB) and the Canadian Tobacco Manufacturer's Council (CTMC). To-date, a price agreement for the 1985 crop has not been finalized. Flue-cured production is projected to fall in a number of other major producing countries, including the Philippines, the Republic of Korea, and India due to efforts to reduce excessive stock levels. Output is also anticipated to decline in Brazil. In Japan, area planted to tobacco continues to decline as farmers shift to other crops. The flue-cured crop in Zimbabwe is forecast to fall 1 percent as farmers attempt to meet government production quotas. Increased output is expected in a number of producing countries, including Poland, Indonesia, Pakistan, South Africa and Indonesia.

The 1985 world burley crop is forecast at 688,000 tons, down 8 percent from last year. Production in the United States, the world's largest producer, is projected to decline. Output is also expected to fall in the Republic of Korea and Spain due to attempts to reduce excessive supplies. In Brazil, producion is also expected to fall. In Mexico, however, production should register an increase as a result of a 3 percent area increase. The crop in Malawi is expected to be in line with last year's level as the government of that country continues its effort to stablizie price levels.

The 1985 world oriental tobacco crop is forecast at 957,000 tons, slightly above last year's outturn. In the Soviet Union, the world's largest producer, output is expected to fall 1 percent as two consecutive bumper crops have strained storage and processing facilities. In Greece, output is expected to fall 4 percent due to government policy which encourages a shift from oriental tobacco to more exportable types. Production increases are anticipated in Turkey, Bulgaria and Yugoslavia.

World dark air/sun-cured tobacco production in 1985 is forecast at 1.1 million tons, slightly below last year's crop. In India, the world's largest producer, output is expected to fall due to the government's acreage reduction program which was enacted to avoid large carryover stocks. In Poland and France, production is also expected to be down as area continues to shifts to lighter tobaccos continue. In China, production is anticipated to increase due to a 12-percent increase in area. The 1985 crop in Indonesia is also expected to increase due to favorable tobacco prices.

World unmanufactured tobacco production for 1984 and 1985, by leaf type, is forecast in 1,000 tons as follows:

Leaf Type	Revised 1984	Forecast 1985
Flue-cured	3,107.0	3,103
Burley	751.5	688
Oriental	953.0	957
Dark Air/sun-cured	1,116.0	1,108
Light Air-cured	130.3	123
Dark Air-cured, cigar	215.9	212
Dark Fire-cured	72.4	67
Total	6,346.1	6,258

1/ Chances are 2 out of 3 that the outcome will be within 329,000 tons of this forecast.

Country/Regional Production

NORTH AMERICA

Tobacco production in North America is forecast down 13 percent in 1985. In Mexico, output is expected to increase 2 percent, while production will fall sharply in both Canada and the United States. Regional flue-cured production is forecast down 11 percent, with smaller crop prospects in Canada and the United States. The 1985 burley crop is forecast down 15 percent. Canada is not expected to plant burley this season due to the lack of viable export markets. A smaller crop is also anticipated in the United States.

In the UNITED STATES, 1985 tobacco production is forecast down 14 percent from the 1984 crop. U.S. tobacco production is expected to be about 670,000 tons from an area of nearly 300,000 hectares yields may average slightly below 1984's, 2.44 tons per hectare.

Production of flue-cured tobacco is forecast down 12 percent and burley tobacco is forecast down 17 percent. Production declines are expected for light air-cured tobacco, dark air/sun-cured and dark fire-cured tobaccos. A slight increase is projected for dark air-cured cigar.

CANADA'S 1984 tobacco crop is forecast at 80,997 tons, down 10 percent from last year's crop. Production cutbacks are anticipated for flue-cured and burley tobaccos due to weak domestic and export demand. Slight increases are expected for dark air/sun-cured and dark air-cured cigar.

The newly created National Flue-Cured Tobacco Marketing Agency is expected to enact legislation this summer that would likely result in domestic production quotas. The Agency is also expected to come up with a cost of production formula and import controls on flue-cured tobacco and its products.

CARIBBEAN

Tobacco production in the Caribbean in 1985 is forecast at 74,150 tons, up slightly from last year. CUBA'S 1985 tobacco crop is projected at 46,000 tons. In the DOMINICAN REPUBLIC, this season's crop is estimated at 25,700 tons, up 2 percent from last year. The shift from black tobacco to light-leaf tobacco is expected to continue due to lower returns to growers. Land has also shifted from tobacco to grains and pasture.

SOUTH AMERICA

Tobacco production in South America is forecast down 6 percent from last year. Higher output in a number of smaller producing countries including, Colombia, Venezuela and Chile is offset by expected lower output in Brazil, Argentina, and Paraguay.

BRAZIL'S tobacco crop is forecast at 388,000 tons, down 3 percent from last year's crop due to a 4 percent area decrease. In the South, tobacco planting started later than usual due to dry weather. Although weather conditions have been irratic during the season, with low temperatures during late November and early December, the quality of the 1985 tobacco crop was above the 1983 and 1984 crops. In the northeast, the significant increase in tobacco production is mainly due to good rainfall during the season. However, the quality of cigar leaf was adversely affected by excessive moisture.

ARGENTINA'S tobacco crop is forecast at 61,357 tons, 19 percent below last year's crop due to unfavorable tobacco prices and adverse weather conditons. Flue-cured tobacco, which represents over 50 percent of output, is down 18 percent.

PARAGUAY'S tobacco crop is forecast at 9,900 tons, 51 percent below the previous year's crop due to a 56-percent area decrease. Farmers shifted from tobacco to cotton as a result of excellent producer returns in 1984. However, this year's tobacco prices are not expected to be as attractive. The dark air/sun-cured tobacco area, which accounts for over 90 percent of tobacco production, registered a 61-percent decline.

COLOMBIA'S tobacco crop is forecast at 37,566 tons, 8 percent above last year's outturn due to favorable tobacco prices. Dark air/sun-cured tobacco, which represents over 60 percent of output, should register a 6-percent increase due to favorable prices. The government has promised farmers that manufacturers will buy all of their production despite the shift to lighter tobaccos. Producers of this type of tobacco type have little choice as to an alternative crop.

EUROPEAN COMMUNITY

In the Community production is forecast slightly above last year's level. Production increases in Italy, the Federal Republic of Germany and Belgium/Luxembourg is expected to offset declines in Greece and France.

ITALY'S tobacco crop is forecast at 155,000 tons, up 1 percent from last year due the expectation of marginal prices increases. The price that is finally agreed upon will depend on the 1985/86 EC price package. The burley crop, which represents nearly 40 percent of output, is projected at 58,880 tons.

GREECE'S tobacco crop is forecast at 138,960 tons, down slightly from last year. Oriental tobacco, which represents over 75 percent of production is expected to decline 4 percent. Greece's long term tobacco development program encourages a switch from oriental tobacco to those considered more profitable.

FRANCE'S tobacco crop is forecast at 35,653 tons, virtually unchanged from last year. A decline in dark air/sun-cured tobacco, which represents approximately 79 percent of output, is offset by an increase in flue-cured and burley production. Government policy continues to encourage the production of lighter tobaccos.

NON-EC WESTERN EUROPE

Production in Non-EC Western Europe is forecast at 52,954 tons, 3 percent above last year. The decline is attributed to lower output in a number of producing countries.

SPAIN'S tobacco crop is forecast at 46,909 tons, 2 percent above last year. Government policies coupled with adequate irrigation water are expected to result in a further increase in flue-cured production in 1985. Burley tobacco, which accounts for approximately 76 percent of production, is expected to decline 5 percent.

The EC and Spain have agreed on the basic terms for the latter to become a member of the Community. However, there has been no agreement with respect to Spain's tobacco policy. Spain's accession into the Community will take place in January 1986.

EASTERN EUROPE

Production in Eastern Europe is forecast at 403,421 tons, up 2 percent from last year due to a 3-percent area increase. Larger crops are expected in Bulgaria, Yugoslavia and Romania.

POLAND'S tobacco crop is forecast at 98,500 tons, slightly below last year. Dark air/sun-cured tobacco, which accounts for nearly 50 percent of production, is expected to decline 11 percent. Although this year's spring was about 20 days late, it did not adversely affect the mid-May planted tobacco. Ground water level is higher than during the past two years and, consequently, will provide good subsoil moisture should the summer be drier than last year.

YUGOSLAVIA'S tobacco crop is forecast at 79,000 tons, 3 percent above last year due to higher producer prices. Tobacco area increased 2 percent. Oriental tobacco represents about 66 percent of production.

USSR

In the SOVIET UNION, the 1985 tobacco crop is forecast at 365,500 tons, 5 percent below the record 1983 crop of 385,000 tons and 1 percent below the bumper 1984 crop. Back-to-back bumper crops of the last two years have strained storage and processing facilities. Another good crop this year will exacerate difficulities. Oriental tobacco, which accounts for over 95 percent of output, is expected to fall 1 percent.

AFRICA, EXCLUDING NORTH AFRICA

Tobacco production in Africa, excluding North Africa, is forecast at 286,806 tons, slightly above last year. Production is expected to increase in a number of major producing countries including Malawi and South Africa. Lower output is projected in Zimbabwe, Africa's largest tobacco producer.

ZIMBABWE'S tobacco crop is forecast at 121,050 tons, 3 percent below last year. Flue-cured tobacco, which represents 97 percent of production, is expected to be down 1 percent. Irrigation supplies are now back to normal and it is expected that approximately 10 percent of the crop will be grown under irrigation.

MALAWI'S tobacco crop is forecast at 69,000 tons, slightly above last year. Burley tobacco, which represents nearly 40 percent of output, is expected to be in line with last year. To prevent excessively large stocks, the government will continue to impose production controls.

ASIA

Tobacco production in Asia is forecast at 3,800,311 tons, 2 percent above last year. Larger crops in China, Indonesia and Pakistan more than offset declines in India, Japan and the Republic of Korea.

CHINA'S tobacco crop is forecast at 1,770,000 tons, 7 percent above last year but 19 percent below the record level of 1982. Flue-cured tobacco continues to represent nearly 85 percent of output. The remaining 15 percent consists of burley, oriental, dark air/sun-cured and cigar tobaccos. Quality problems still persist despite measures to produce more medium and high quality leaf. To further promote the production of high quality tobacco, the price paid for top quality tobacco in 1985 will increase by about 20 percent.

INDIA'S tobacco, crop is forecast at 450,000 tons, 9 percent below last year's crop. Except for burley, production of all other types of tobacco is expected to decline due to government imposed restrictions. The government will continue to restrict output in 1985 in an effort to avoid large supplies and to keep tobacco prices at remunerature levels. Dark air/sun-cured tobacco, which accounts for more than 75 percent of output, is expected to register a 3-percent decline.

JAPAN'S tobacco crop is forecast at 121,020 tons, 11 percent below last year due to a 10-percent area reduction. Flue-cured toabcco, which represents 59 percent of production, will account for the entire decrease. Area planted to tobacco continues to decline as a result of favorable prices for alternative crops.

The REPUBLIC OF KOREA'S tobacco crop is forecast at 85,000 tons, 10 percent below last year. The Office of Monopoly lowered the production target in an effort to avoid large stocks. Flue-cured tobacco, which represents over 65 percent of output, is expected to decline 11 percent.

The PHILIPPINE'S tobacco crop is forecast at 75,194 tons, 24 percent below last year due to a 27-percent area decrease. Flue-cured tobacco, which accounts for nearly 50 percent of output, is expected to register a 30-percent decline. The bumper crop of 1984 has resulted in government action restricting output in order to avoid large stock buildups.

PAKISTAN'S tobacco crop is forecast at 84,450 tons, up 21 percent from last year. Planted area is expected to be 8 percent above a year ago due to attractive tobacco prices, a shift from sugarcane to tobacco production and increased leaf requirements of the tobacco companies. Flue-cured tobacco, which represents over 40 percent of production, is expected to register a 4-percent increase.

MIDDLE EAST

Tobacco production in the Middle East is forecast at 256,847 tons, 2 percent above last year due to larger production in Turkey and Syria. TURKEY'S tobacco crop is forecast at 196,198 tons, 3 percent above last year due to attractive tobacco prices. However, the Monopoly is discouraging poor quality production. Oriental tobacco is forecast at 194,838 tons, 3 percent above last year.

Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture**'s telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture.**

Subscribe today! Just $16.00 ($20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE. Mail this form to: Foreign Agricultural Service

Summary.....2

World Developments Affecting Tobacco Demand

Hong Kong's leaf imports up 26 percent in 1984.....2
Indonesia was net importer of flue-cured tobacco in 1984.....2
Morocco's leaf imports increase in 1984.....3
Portugal's tobacco imports up in 1984.....3
Spain's leaf imports are expected to decline slightly in 1985.....3

World Developments Affecting Tobacco Supply

Canada expected to create a two-price system.....3
Italy's leaf exports up significantly in 1984.....3
Korea's tobacco exports down considerably in 1984.....4
Pakistan is major exporter of cigarettes to Afghanistan.....4
Turkey's leaf exports up slightly in 1984.....4

U.S. Tobacco Developments

U.S. Tobacco Trade and Outlook.....4
U.S. Tobacco Trade Statistics, May 1985.....6

Special Report: World Cigarette Production and Trade.....16

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World cigarette production in 1984 increased 3.2 percent to 4,696 billion pieces. China's cigarette output increased one-tenth and was the major reason for the large gain in global cigarette output. Excluding China, world cigarette production increased less than 1 percent. Most Asian and African countries showed increases in cigarette output. Stagnation in output occurred in Europe, North America, and Japan.

U.S. unmanufactured tobacco exports in May 1985 dropped 40 percent from May 1984 to 7,541 tons. Uncertainty over 1985 support price levels and the position of tobacco stocks are believed responsible for the sagging exports in May. Flue-cured leaf exports in May dropped 32 percent, while burley exports were down 53 percent. Cumulative exports for January-May 1984 were up 7 percent to 92,162 tons valued at $596 million. Burley exports were up 48 percent, while flue-cured exports dropped 4 percent. U.S. unmanufactured tobacco imports for consumption during May increased 30 percent to 15,700 tons. For January-May, imports for consumption were down 1 percent to 77,286 tons valued at $229.7 million.

World Tobacco Highlights include:

Hong Kong's tobacco imports up significantly in 1984.
Indonesia was net importer of flue-cured tobacco.
Spain's tobacco imports decline in 1984.
Italy's leaf exports increase substantially.
Korea's tobacco export decrease in 1984.

Hong Kong's imports of manufactured tobacco rose 26 percent over the 1983 level to 16,849 tons in 1984. The increased leaf imports were needed to meet the expanding local cigarette manufacturing industry with growing cigarette export demand. China remained the largest supplier of leaf, accounting for 29.5 percent, followed by South Afica (22.6 percent) and the United States (20.4 percent). It is anticipated that China again will be the leading supplier of leaf to Hong Kong in 1985 and 1986. The relative shares of leaf from major sources will depend on the availability and prices.

Indonesia was a net importer of flue-cured tobacco in both 1983 and 1984. Flue-cured imports in 1984 were 12,004 tons, about the same level as 1983. China was the major supplier with a 46-percent share. The U.S. market share increased from 11 percent in 1983 to 17 percent in 1984. After a sharp decline in imports of U.S. flue-cured tobacco in 1983 due to high U.S. prices, a devaluation of the Rupiah, and an above average tobacco crop in Indonesia, Indonesian flue-cured tobacco imports from the United States increased in 1984. This increase was the result of the cigarette industry, especially the kretek industry, using higher quality tobacco to improve their blend in a very competitive domestic market and a small but increasing export market. Imports of U.S. flue-cured are expected to increase slightly in 1985 as a result of the low stock position of local tobacco and a desire on the part of the kretek manufacturers to increase the quality of their product

Morocco's leaf tobacco imports in 1984 were 7,163 tons, an increase of 9 percent from 1983. Factors affecting the near-term Moroccan imports of tobacco and tobacco products include: the current financial situation which has resulted in stringent austerity measures and severely curtailed foreign currency availabilities, and constraints on consumer demand resulting in part from higher taxes on tobacco products. In the short term, continued stock drawdowns will keep tobacco imports to recent year levels. Once stocks have been reduced to desired carryover levels, imports will begin to reflect more accurately the difference between domestic and imported leaf needed to meet blending requirements.

Portugal's tobacco imports in 1984 were 10,067 tons, increasing 16 percent from the 1983 level. Flue-cured and burley represented 70 percent of total unmanufactured imports in 1984. The government policy is to reduce Portugal's dependence on imports of foreign leaf. To stimulate increased production, the goverment annually increases the guaranteed producer price and provides both technical and financial assistance. In 1984, Portugal attained 28 percent self-sufficiency in tobacco production. However, the production-consumption gap should narrow much more slowly in the future as the area of suitable tobacco growing soils, especially for flue-cured, is limited.

Spain's unmanufactured tobacco imports in 1985 are projected to drop 1 percent to 70,500 tons, as a result of larger domestic supplies and compulsory mixing rates. However, imports from the United States, mostly flue-cured and burley blends, are expected to grow 3 percent because of increased demand for domestically produced American-blend cigarettes. Flue-cured imports are expected to show a small increase in 1985. The U.S. share of the market is projected to show a marginal decline. Non-fermented burley imports are expected to increase slowly. The U.S. market share is projected to show a small increase. Burley imports in the form of leaf will depend largely on the strength of the dollar and competition from other producing countries.

Canada has traditionally exported about 40 percent of its flue-cured production. Should a national marketing agency be formed stipulating domestic cost of production recovery and national production quotas, a two-price system affecting export sales is expected to emerge. It is expected that the price paid for tobacco by Canadian tobacco manufacturers would rise sufficiently to enable export sales at prices below the domestic price. There would likely be a degree of rationalization of production within the producing areas and a number of small growers would cease operation.

Italy's tobacco leaf exports in 1984 rose significantly to 96,796 tons, up 21 percent from the 1983 level. This sharp increase was mainly due to expanded exports of oriental tobacco (up 40 percent) and increased burley exports (up 22 percent). Oriental tobacco is exported mainly to Eastern European countries at very low unit prices and subsidized by generous EC export restitutions. Burley shipments, which account for 30 percent of total exports, are mainly directed to the EC, Eastern Europe and the United States. Exports of Kentucky also rose by 22 percent in 1984 from the previous year, while shipments of other types remained stable.

Korea's flue-cured tobacco exports in 1984 were 14,332 tons, down considerably from the 1983 level due to increased competition in major markets. Major destinations for 1984 were the United Kingdom, West Germany, Italy, and the United States. The Office of Monopoly's 1985 export target is 17,000 tons. Burley exports in 1984 were 15,677 tons, up slightly from the 1983 level. Major destinations were the United States, West Germany, Italy, and Japan. The share of burley in total leaf tobacco exports has increased in recent years due to quality improvement..

Pakistan is the major exporter of cigarettes to neighboring Afghanistan and also sells cigarettes to the gulf states and China. During 1984, over 1.83 billion pieces were sold, slightly above the 1.33 billion exported in 1983. The cigarette export trade from Pakistan is dominated by Premier Tobacco Industries, which claimed 42 percent of total exports in 1984. Laskon Tobacco Company accounted for 37 percent of exports in 1984. Afghanistan purchased 65 percent of Pakistan cigarette exports in 1984, with Suadi Arabia, Dubai, and Kuwait being the other leading markets.

Turkey's unmanufactured tobacco exports in 1984 were 69,715 tons ($216.4 million) compared with 69,528 tons ($237.8 million) in 1983. The decline in value was due to reduced prices for lower grades and also to discount sales of old crops by the monopoly. Foreign buyers, displeased with the increase in price of Aegean leaf, delayed their purchases until March 1985 to demonstrate their dissatisfaction. Such delays not only put some local exporters in financial difficulties resulting in delayed payments to farmers, but also resulted in smaller than anticipated tobacco exports in 1984. The United States continued to be the single biggest buyer of Turkish tobacco. In 1984, the United States took about 59 percent of total tobacco exports.

U.S. TOBACCO DEVELOPMENTS

U.S. Tobacco Trade Outlook- U.S. unmanufactured tobacco exports during May 1985 were 7,541 tons valued at $47.3 million, a drop of 40 percent in volume from May 1984. Flue-cured tobacco exports in May were down 32 percent, while burley exports fell 53 percent from May 1984. Switzerland was the leading market, taking 1312 tons, followed by Spain with 922 tons, West Germany with 627 tons, Denmark with 555 tons, and Hong Kong with 484 tons. For January-May 1985, exports were 92,163 tons valued at $596 million, an increase in volume of 7 percent from the same period in 1984. The leading markets were West Germany (13,980 tons), Japan (10,677 tons), Italy (9,581 tons), Spain (8,528 tons), and Thailand (8,079 tons).

Flue-cured tobacco exports during May 1985 were 4,217 tons valued at $29 million, a decrease of 32 percent in volume from May 1984. For January-May 1985, flue-cured tobacco exports were 45,521 tons valued at $293.8 million, down 4 percent in volume from a year ago. The leading destinations were Spain (6,934 tons), West Germany (6,202 tons), Italy (5,183 tons), Thailand(5,091 tons), and the United Kingdom (2,957 tons).

Burley tobacco exports dropped off in May to 1,654 tons valued at $11.3 million, a decline of 53 percent in volume from May 1984. For January-May, burley exports were 31,816 tons valued at $235.2 million, a jump of 48 percent in volume from last year. Japan was the leading market, taking 10,220 tons, followed by West Germany with 6,965 tons, Italy with 3,997 tons, and Switzerland with 3,594 tons.

Exports of other types (excluding flue-cured and burley) during January-May 1985 were 14,826 tons valued at $67.4 million, down 14 percent in volume from a year ago. Stems, trimmings, and scrap accounted for 67 percent of exports of other types.

Cigarette exports during May 1985 were 3.6 billion pieces valued at $68.4 million, about the same level as May 1984. For January-May 1985, cigarette exports were 22.99 billion pieces valued at $462 million, up 6 percent in volume from the same period in 1984. Belgium and Hong Kong were the leading markets with 3.4 billion pieces, followed by Saudi Arabia with 3.28 billion, Japan with 2.45 billion pieces, and Singapore with 1.3 billion.

Unmanufactured tobacco imports for consumption (duty paid) for May 1985 were 15,700 tons valued at $46.8 million, an increase of 30 percent from May 1984. Stemmed cigarette leaf imports during May increased 109 percent from May 1984, while oriental leaf imports were up 12.5 percent from May 1984. For January-May 1985, imports for consumption were 77,286 tons valued at $229.7 million, down 1 percent from last year. Oriental laaf imports were 33,995 tons, up 6 percent; while stemmed-cigarette leaf imports were 20,030 tons, an increase of 17 percent.

General Imports (actual arrivals) of unmanufactured tobacco for May 1985 were 23,451 tons valued at $69.5 million, up 50 percent from May 1984. For January-May 1985, general imports were 87,931 tons valued at $245 million, a drop of 6.6 percent from last year. Oriental imports were down 9 percent, while other cigarette leaf imports dropped 10 percent.

JULY 1985 COMMODITY PROGRAMS, FAS, USDA

SPECIAL REPORT: WORLD CIGARETTE PRODUCTION AND TRADE

SUMMARY

World cigarette production in 1984 was 4,696 billion pieces, an increase of 3.2 percent over the 1983 level. This comes after two years of stable world production. China, which accounts for 23 percent of total world cigarette output, was the major reason for the substantial gain in cigarette production. Chinese cigarette output increased 9.7 percent to 1,062 billion pieces. Excluding China, world cigarette production increased less than 1 percent. This stagnation in world cigarette output (excluding China) was caused by increased cigarette taxes, continuing recession in many countries, and expanding anti-smoking campaigns. The stagnation in cigarette output occurred mainly in Europe, Japan, the United States, and Canada. There was increased cigarette production in most Asian countries. South American and African production rose 1.9 percent and 2.6 percent, respectively. Increased cigarette production in many developing countries resulted from large population growth, increased urbanization, less advertising restrictions placed on tobacco companies, and higher consumption of factory-produced cigarettes. Of the major cigarette producers, the United Kingdom, Brazil, and Italy recorded declines in cigarette output; the United States and Japan's output remained unchanged; and the Soviet Union, West Germany, Indonesia, India, and China had increased cigarette production.

Smokers in many countries continue the trend toward American blend cigarettes and away from dark cigarettes. Some of the countries where American blend cigarettes are gaining popularity include Spain, France, Yugoslavia, and Colombia. Many of these light cigarettes are foreign brands produced within a country under licenses. Also, there has been an increase in "roll-your-own" cigarettes in countries such as the Netherlands, Belgium, and Ireland, as a result of high prices for manufactured cigarettes caused by increasing taxes.

World cigarette exports in 1984 were 328.7 billion pieces, up slightly from the 1983 level. Exports from the United States continued to decline, dropping 7 percent. Bulgarian cigarettes export fell 4 percent to 58.4 billion pieces. West German cigarettes shipments increased 1.6 percent, while cigarette exports from the United Kingdom dropped 14 percent.

North America

North American cigarette production in 1984 remained stable compared to 1983. In the United States, cigarette production remained unchanged, while slight decreases occurred in Canada and Mexico. In most Central American countries, cigarette production increased in 1984.

United States - Cigarette production in the United States in 1984 was 668.2 billion pieces slightly above the 1983 total. Output stabilized of despite higher prices, anti-smoking activities, and restrictions on where people can smoke. Americans smoked 600 billion cigarettes last year, about the same as in 1983, but down 5 percent from 1982.

However, cigarette prices rose less rapidly than in 1983, the economy improved, and some consumers switched to generic cigarettes that are 20 to 25 percent cheaper than standard brands. While domestic use stabilized, U.S. cigarette exports declined 7 percent to 56.5 billion pieces. In 1985, total domestic consumption is expected to decline slightly as some states raise taxes and smoking restrictions increase. Last year, per capita use by persons 18 and over fell to 3,454 cigarettes, down from 3,494 in 1983. In 1985, per capita consumption is expected to continue to fall.

Canada - Canadian cigarette production continued to decline in 1984, as a result of related health issues, general price increases, and anti-smoking campaigns. However, last quarter statistics for 1984 and early 1985 data indicate that the consumption decline may have been at least temporarily arrested. In the five months ending February 1985, cigarettes smoked per capita rose 2 percent over the comparable period a year earlier. This increase marked the end of more than a 6-percent decline in per captia disappearance that began in 1982. Cigarette production for 1985 is expected to slightly exceed the 1984 level.

Mexico - Cigarette production in 1984 was 48.5 billion pieces, a drop of 1.5 percent from 1983, as a result of lower cigarette demand and the reduction in production of leaf. Production in 1985 is forecast to increase slightly to meet higher demand. Processors report that about 75-80 percent of total processing capacity is being used. Demand for lower priced non-filter cigarettes has increased stimulating larger non-filter production, due to the depressed economic situation. The decision by the government to put health warnings on cigarette packages does not seem to have had any significant effect on consumption.

South America

Cigarette production in South American countries rose 1.9 percent in 1984. Argentina cigarette production jumped 12 percent, offsetting a slight decline in Brazil. Columbia cigarette production increased 3.9 percent, while Venezuela production was up 2.4 percent.

Argentina- Cigarette production for 1984 jumped to 38.9 billion pieces from 34.6 billion in 1983. This increase resulted from strict price controls established by the government in December 1983 which caused real cigarette prices to fall. This was compounded by improved incomes during part of the year as a result of large salary increases granted by the government. Cigarette production for 1985 is expected to decline from last year's high level. As of March 1985, the government has loosened its price controls and is now allowing cigarette prices to increase above inflation to regain some of the loss. Moreover, real incomes are falling as salary increases this year are not keeping pace with inflation.

Brazil- Cigarette production in 1984 declined 1 percent to 127.8 billion pieces. Cigarettes are manufactured and marketed by three large companies and several smaller companies. The three large companies account for about 97 percent of total domestic consumption with the largest having a 79-percent share of the market. The drop in cigarette consumption during recent years is attributed to the sharp increases of cigarette prices and a slump in the economy. However, this trend may be changing; there has been an upward trend in cigarette consumption since the last quarter of 1984.

Colombia- Cigarette production in 1984 was 23.4 billion pieces, an increase of 3.9 percent from 1983. The larger cigarette output in 1984 and 1985 mainly is the result of the increase in light cigarette production. However, the increase in light cigarette production in 1984 was the result of the ban on cigarette imports. Cigarette prices showed an increase during 1984. Prices for imported light leaf cigarettes are double those for equivalent local brands.

The cigarette import prohibition has kept legal cigarette imports low, but contraband has increased; although it comes from Venezuela and the Dutch Antilles, the original source is the United States.

European Community

Cigarette production in the European Community dropped 1.4 percent in 1984. The United Kingdom's cigarette production declined 8 percent as the government continues to increase the tax on cigarettes. Most countries within the Community recorded declines in domestic cigarette consumption except for West Germany, Greece, and Denmark. German cigarette production rose 3.9 percent in 1984 as consumers adjusted to the steep tax increase in 1982.

Belgium- Cigarette production declined an additional 1.4 percent in 1984, with domestic consumption falling 11 percent. This significant decline is attributed to reduced "border sales", mostly to West Germany. Smaller domestic consumption due to higher retail prices and reduced net disposable income. More Belgium cigarette smokers have shifted to "roll-your-own" cigarettes. Other smokers, mainly above the age of 45, have reduced their smoking or given up entirely. Manufactured cigarettes cost over double the price of this "roll-your-own".

France- Seita's cigarette production amounted to 60.7 billion pieces in 1984, a decrease of 2 percent compared to 1983. Cigarette output was divided evenly between filter and non-filter cigarettes. French cigarette production has been declining steadily during the past 6 years. It peaked at 80.8 billion pieces in 1978. The main reason for the decline in production has been the consumer shift to imported "blond" cigarettes.

This situation was precipitated in 1976 by EC regulations requiring the French Monopoly, Seita, to allow the sales and distribution of imported cigarettes. French cigarette consumption rose 2 percent to 91.2 billion in 1984. The reduction in Seita's share of the French market slowed following the successful launching of a new American-type cigarette manufactured in France. In 1984, American-type cigarettes, most of which were imported, accounted for 47 percent of cigarette consumption, compared to 43 percent in 1983.

Greece-Cigarette production in 1984 was 27 billion pieces, an increase of 6.6 percent from 1983. Consumption of cigarettes produced in Greece also rose 6.6 percent in 1984. Greek cigarette prices were raised on January 24, 1985. Greek oriental brands were increased 5 drs., Greek blended brands increased 8 drs., and foreign brands manufactured in Greece increased 10 drs. Import cigarette prices were also increased 10 drs. The new increases reduce the price gap between domestic brands and foreign brands locally manufactured.

Ireland- Cigarette production in 1984 declined 3 percent to 7.3 billion pieces. The steady reduction in cigarette output is the result of the continuing recession, increasing government sponsored health campaigns, and advertising restrictions. Sales of "roll your own" are rising approximately 15 percent annually. Also, cigarette export sales, which in previous years made up for falling home usage, are not taking up the slack. Home consumption of cigarettes is declining between 2.5 and 5 percent per year, and is anticipated to continue in the near future.

Italy- Cigarette production in 1984 dropped 4 percent, after increasing in 1983. Domestic brand output was 71,365 tons, down 4 percent from 1983. Production of foreign brands produced in Italy under license remain unchanged. Decreasing popularity of domestic brands, after a few years of recovery, is the major reason for the production drop. Italian cigarette imports in 1984 increased 3 percent more than in 1983. West Germany accounted for 56 percent, 24 percent from Switzerland, and the remainder from other EC countries. Most of these imports are comprised of American brands manufactured in Europe under license.

Netherlands- Dutch cigarette production increased slightly in 1984 to 45.5 billion pieces, due entirely to a 16.5-percent increase in exports while domestic consumption fell 15 percent compared to 1983. Since 1980, per capita consumption of cigarettes plunged from 1,575 to 1,162 pieces in 1984. Declining incomes, 38-percent higher cigarette prices, and the health issue are reasons for this development. Also, smokers are shifting toward more roll-your-own cigarettes. Since May 15, 1980, the Dutch tobacco industry has voluntarily restricted itself in the advertising and the promotion of tobacco products. This "advertising code" has been developed by the industry in the hope that the government will abandon legislation which might be more restrictive.

West Germany- Cigarette production in 1984 was 162 billion pieces, an increase of 3.9 percent from 1983. The confusion on the German cigarette market caused by the steep tax increase in 1982 has disappeared. Price is no longer being used as an agressive marketing instrument as in 1983. Traditional cigarette brands are regaining market shares, which had been lost to generics. Traditional brands made up 77 percent of the market in 1983. This share grew to 83 percent during first half of 1984 and about 86 percent during January/February 1985.

The market share of generics dropped from 5 percent to 3.9 percent during the corresponding period, which may be a result of the price adjusted in mid-1983 and a strong brand loyalty. West Germany exports were on an upswing in 1984, reaching 44.5 billion pieces. Major customers are EC countries. Shipments to the United Kingdom went from 888,000 pieces in 1983 to 5 billion in 1984 and are primarily low-price brands.

United Kingdom- Cigarette production in 1984 was 130.5 billion pieces, a decline of 8 percent from 1983. Cigarette consumption declined 2.5 percent in 1984, and is expected to fall again in 1985. Reasons for the decline include the growing health concerns and increased cigarette taxes. The 1985 government budget included a 6-pence rise in taxes for a pack of 20 cigarettes and manufacturers are expected to increase prices by an additional 2 to 3 pence to cover rising costs. Consumption is expected to fall another 2 percent in 1985. Active campaigns by public interest groups and local governments to curtail smoking in public places will further reduce cigarette consumption.

An important feature in the U.K. cigarette market is the entrance of "own label" cigarettes marketed by supermarkets and smaller retail chain wine stores. These cigarettes are imported from continental manufacturers and their market share has expanded rapidly.

Other Western Europe

Cigarette production in other Western European countries for 1984 increased by 7.3 percent, mainly as result of an 18-percent jump in production in Spain. Other countries showed a decline or no increase.

Spain- Cigarette production in 1984 was 75.1 billion pieces, up 18 percent from 1983. Smokers continue to switch from dark cigarette to American-blend cigarettes. Since this trend is expected to continue, the Spanish tobacco monoply is refurbishing at least three of its dark cigarette plants to produce American-blend cigarettes, thus bringing the total number of plants manufacturing light cigarettes to 5. The remaining 8 plants will continue to produce dark cigarettes and cigars. American-blend cigarettes, mostly domestically made, currently represent over 50 percent of the total consumption, compared with about 35 percent three years ago.

Switzerland- Cigarette production in 1984 was 25.4 billion pieces, a 1-percent decline from 1983. Domestic cigarette production has been slowing down over the past years. This is a result of marketing difficulties in cigarettes for export. Domestic consumption of cigarettes is stable. There has been a trend toward light cigarettes. American blend cigarettes market share in 1984 was 60 percent, compared to 58 percent in 1983.

Eastern Europe

Cigarette production in Eastern Europe increased less than 1 percent. Poland output rose 4 percent, while Bulgaria production declined 3.6 percent.

Yugoslavia- Production of cigarettes in 1984 was 59 billion pieces, an increase of 1 percent from 1983. There has been a rapid increase in the last 10 years in the manufacturing and sale of American-type blended cigarettes. Currently, ten American-type blended cigarettes are being produced in Yugoslavia under licensed arrangements. Cigarette exports in 1984 are estimated at 3 billion pieces, compared to 2.5 billion pieces in 1983. The increase was primarily due to bilateral trade arrangements with the Soviet Union, Poland, and Czechoslovakia.

U.S.S.R

Soviet Union- Cigarette production in 1984 was 385 billion pieces, up 4 percent from 1983. This was 3 billion above the plan. Soviet demand for tobacco products will continue to rise in the foreseeable future. Improved supplies of domestic cigarettes should reduce the necessity to import. Bulgaria, which accounts for over 40 percent of Soviet imports, is expected to maintain its market share, possibly at the expense of countries which do not trade on a clearing-account basis.

Africa

African cigarette production in 1984 increased 2.6 percent. Egypt's production rose 9 percent, while South Africa's production recorded a slight decrease.

Egypt- Cigarette production in 1984 was 48 billion pieces, an increase of 9 percent from 1983. The single company which is now the Egyptian tobacco industry, is in a turnaround after years of heavy losses and subsidiies. A 28-percent cigarette price increase last fall finally allowed Eastern Tobacco Company to sell above its costs of production. While a severe shortage of foreign exchange is limiting imports, productive capacity is now more than adequate to meet strong local demand, and the regional export market appears promising. Production of western cigarette brands in Egypt is pending on a fee basis.

South Africa- Cigarette production in 1984 was 27.5 billion pieces, slightly below the 1973 level. South African cigarette consumption is slowly declining, as the result of a low level of economic activity. When economic conditions improve, an increase in consumption is expected. The effects of price increases, taxes, and anti-smoking campaigns are usually nullified by the high population growth.

Asia

Asian countries in 1984 recorded a 6.2-percent increase in cigarette production, mainly as a result of a large increase in China. India and Indonesia also had large increases in cigarette output. Japan's cigarette production remained unchanged, as result of stagnant demand and increased imports.

China- Cigarette production in 1984 grew 9.6 percent to 1,062.5 billion pieces, and a growth rate of close to 9 percent is expected in 1985. The strongest growth area continues to be in filter cigarettes which expanded 20 percent in 1984. The overall rate of production expansion has tapered off from 1980 and 1981 when expansion averaged 14 percent each year. A national effort to improve cigarettes produced has included the importation of machinery, especially rolling machines, for selected factories around China. The China Daily estimates that 300 million people in China smoke. In spite of a moderate anti-smoking campaign, sales of cigarettes increased 10 percent in 1984 and are expected to climb another 5-10 percent in 1985. The increase in sales is primarily in rural areas where rural incomes are increasing.

Hong Kong- Cigarette production in 1984 was 9.96 billion pieces, 29.5 percent over the 1983 production, and 72 percent above the 1982 level. The increase in production is solely the result of the growing demand of the export market. Total cigarette (exports and re-exports) rose 48 percent over the 1983 level. Exports to China surged 71.8 percent, accounting for 77 percent of total exports, followed by Macau and Singapore. It is anticipated that the cigarette trade will continue to grow in the next few years. Domestic consumption of cigarettes dropped marginally in 1984 to 6.8 billion pieces. Imported cigarettes accounted for 67 percent and local brands for 33 percent.

India-Cigarette production during 1984 increased 5.7 percent to 85 billion pieces because of increased sales resulting from stable prices. Filter-tipped cigarettes in 1984 had a market share of 45.7 percent, compared to 41.7 percent in 1983. It is estimated that for every cigarette sold in India, nearly 7 bidis (native type cigarettes) are sold. There has been some shift from bidis smoking to cigarette smoking in rural areas during recent years. However, no major switch from bidis to cigarettes is anticipated because cigarettes are more costly than bidis due largely to the government's taxation policy.

Indonesia- Cigarette production in 1984 rose 6.6 percent to 99.4 billion pieces. Kretek output increased sharply to 72 billion pieces. White cigarette production decreased to 29.9 billion. Cigarette production for 1985 is projected to decrease for the first time ever. The projected reduction is the result of reduced availability of tobacco, the fact that many small kretek manufacturers are in serious financial positions because of high prices of tobacco and cloves, and the recently introduced VAT increasing farm gate prices.

Japan- Cigarette production in 1984 was 306 billion pieces, about the same level as 1983, as the result of stagnant demand and increased imports. Production is not expected to increase in the coming years because of increasing imports. The number of adult smokers declined slightly in 1984, mainly due to health consciousness. The percentage of adult males who smoke fell from a high of 83.7 percent in 1966 to a record low 65.5 percent in 1984. The market share of imported products rose to 2.1 percent in 1984 from the previous years's 1.8 percent. It is expected cigarette import's share will be 5 percent in a few years.

Philippines- Cigarette production in 1984 was 58.6 billion, an increase of 1 percent from 1983. The share of filter cigarettes dropped to 90 percent in 1984 from 93 percent in 1983. This can be attributed to the lower purchasing power of the peso which resulted in a shift to less expensive non-filter cigarettes, particularly in rural areas. Difficulties in importing foreign leaf tobacco for blending purposes due to government restrictions on foreign exchange availability plus the devalued peso made imports of leaf tobacco too expensive for some cigarette manufacturers.

Thailand- Production of cigarettes in 1984 was 30 billion pieces, an increase of 3.4 percent from 1983. The Thailand Tobacco Monopoly is the sole manufacturer, importer, and distributor of cigarettes. The government's policy is to lower the foreign leaf content of the cigarettes produced by the Monopoly. In 1984, foreign leaf accounted for only 28 percent of the total leaf used by the Monopoly, which is far below the 51 percent content 12 years ago. The cabinet in early April raised the excise duty on cigarettes using foreign leaf and the Monopoly raised the price of these cigarettes related to those brands using only Thai leaf.

Turkey- Cigarette production in 1984 was 61.9 billion pieces, less than 1 percent above the 1983 level. The monopoly continues to be the sole manufacturer and distributor of manufactured tobacco in Turkey. While non-filter cigarettes showed a decline of 25 percent, filter type cigarette production increased 6 percent. The existing capacity of eight plants can easily meet domestic needs, and the Monopoly is not utilizing its full capacity to avoid stock accumulation. Cigarette imports, following the present government liberalization of import regulations, are up significantly. Imports in 1984 reached 2.77 billion pieces. Prospective imports in 1985 are estimated at 5 billion pieces.

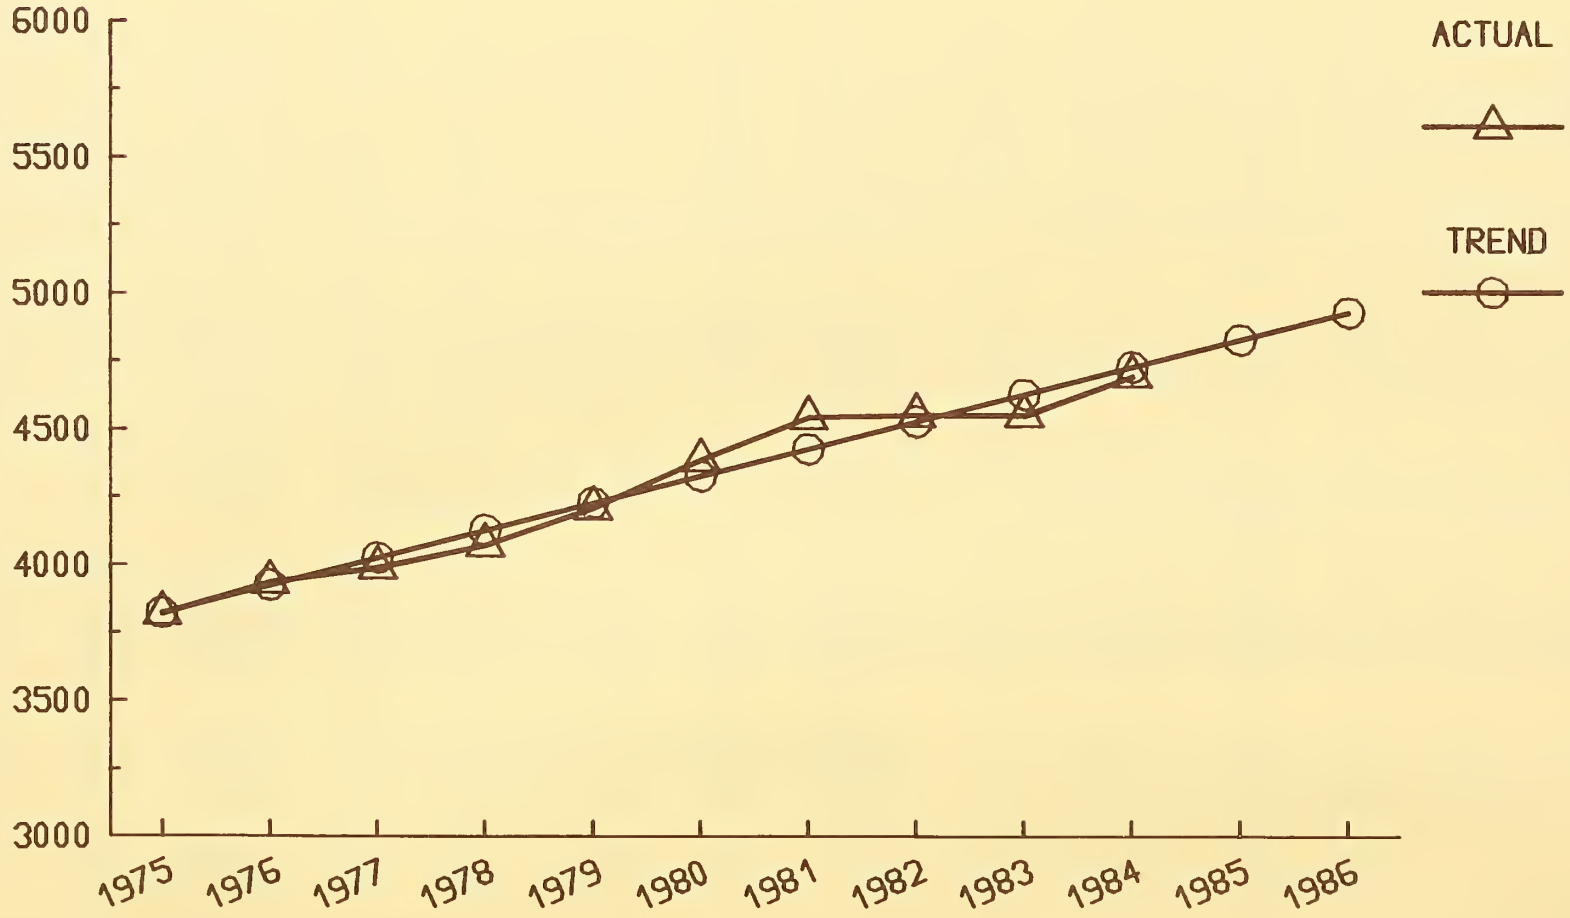
1/ INTERCEPT - TREND VALUE OF PRODUCTION WHEN X EQUALS ZERO (i.e. 1970).
2/ SLOPE - THE CHANGE IN THE TREND VALUE OF PRODUCTION FOR A ONE UNIT CHANGE IN TIME (i.e. annual change).
3/ CORRELATION COEFFICIENT - A VALUE BETWEEN 1 AND -1 THAT MEASURES THE DEGREE OF LINEAR ASSOCIATION BETWEEN TIME AND PRODUCTION. THE LARGER THE ABSOLUTE VALUE, THE HIGHER THE DEGREE OF LINEAR ASSOCIATION BETWEEN THEM.
4/ A MEASURE OF THE AMOUNT OF VARIATION OF THE ACTUAL PRODUCTION FROM ITS TREND VALUES.
5/ NINETY-FIVE PERCENT CONFIDENCE INTERVAL: IT CAN BE SAID, WITH 95 PERCENT CONFIDENCE, THAT THE CIGARETTE PRODUCTION WILL FALL WITHIN THE INTERVAL.

JULY 1985 FAS, USDA

WORLD CIGARETTE PRODUCTION
1975 - 1986
(BILLIONS OF PIECES)



NOTE: 1984 FIGURES PRELIMINARY.
ESTIMATES ARE INCLUDED IN TOTAL FIGURES
IN THE ABSENCE OF REASONABLE DATA.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

U.S. Tobacco Trade Statistics, June 1985.....8

Special Report: World Tobacco Supply and Distribution.....18

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World tobacco stocks on Jan. 1, 1985, were near the Jan. 1, 1984, level. Leaf consumption in 1984 increased 5 percent, recovering from a 3- percent decline in 1983. World leaf production in 1984 increased 5 percent, offsetting increased tobacco consumption.

U.S. unmanufactured tobacco exports during June 1985 continued at low levels, dropping 49 percent from June 1984 to 6,838 tons. Flue-cured tobacco exports accounted for most of the decline. For January-June 1985, exports were 99,001 tons, valued at $640.4 million, down 1 percent from a year ago.

U.S. leaf tobacco imports for consumption for June 1985 were 15,420 tons, an increase of 45 percent from the abnormally low level imported during June 1984. January-June cumulative leaf imports were 92,707 tons valued at $270.3 million, an increase of 4.5 percent from last year.

World Tobacco Highlights include:

Switzerland's leaf imports down in 1984
Taiwan's tobacco imports expected up in 1985
Brazil's tobacco exports increase in 1984
Malawi's auction prices mixed
Zimbabwe's flue-cured prices up

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Austria's tobacco imports in 1984 were 10,844 tons, a decline of 5 percent from 1983. A smaller output of tobacco products was the major reason for the decline. Imports from the United States totaled 1,163 tons, maintaining its market share despite the strong dollar. Imports from the United States consisted mainly of flue-cured tobacco. A large volume of U.S. leaf was imported as a ready or premix, which is predominantly used for the manufacturing of foreign brand cigarettes produced under license. The tobacco monopoly, to maintain the quality of its licensed products, depends on a relatively large volume of U.S. tobacco.

Kenya's cigarette sales in 1984 increased only 0.4 percent over 1983 because of a deteriorating internal economy due to the drought and a general shortage of money. Cigarette demand did not adjust to the new price levels set in June 1984. The drought and uncertainty over food supplies created a reluctance among consumers, particularly in rural areas, to spend their limited cash resources on cigarettes. On Jan. 1, 1985, the government required all cigarette brands sold on the domestic market to carry a warning in both English and Swahili.

Norway's tobacco consumption increased about 1 percent in 1984 to 5,673 tons, while U.S. leaf utilization declined 4 percent to 1,800 tons. An 8-percent increase in cigarette consumption was partly offset by a decline in sales of tobacco for roll-your-own cigarettes. Only about one-third of the cigarettes sold in Norway are made domestically, while virtually all the tobacco for roll-your-own cigarettes is processed in the country.

Imports of unmanufactured tobacco in 1984 increased 16 percent to 5,531 tons and year-end stocks equaled 14 months' consumption. Imports of leaf tobacco from the United States declined 13 percent to 2,248 tons, mainly as result of unusually large imports and stock buildup in 1983. Lower demand for roll-your-own cigarette tobacco, where U.S. tobacco is an important ingredient, and high U.S. prices encouraged the industry to look for alternative sources.

Switzerland's leaf imports in 1984 were 19,897 tons, a decline of 7 percent from 1983. Imports of U.S. tobacco were 5,418 tons,.a decline of 16 percent mainly due to the unsatisfactory quality of U.S. Maryland and burley leaf from the 1983 crop. Swiss ending stocks of leaf tobacco declined 22 percent; thus, imports during 1985 are expected to increase. The use of tobacco by Swiss manufacturers remained almost unchanged. However, there was a slight increase in the use of cigar cut tobacco leaf.

Syria's local cigarette consumption increased 10 percent in 1984, compared with 1983. This increase is triple the 3-percent increase in population. Syrian cigarette smokers are increasing their preference for higher quality, more expensive cigarettes. This is reflected in the 11-percent increase in sales of "superior" quality locally produced cigarettes. This trend is forecast to continue as personal income increases. In addition to local production, Syria consumes a large quantity of illegally imported foreign cigarettes. The foreign brand cigarette in Syria is a prestige symbol. Most of the illegally imported cigarettes are of U.S. origin.

Taiwan's imports of leaf are expected to increase to 14,500 tons in 1985. The United States is expected to supply 90 percent of these imports. One cigarette brand accounted for 90 percent of total cigarettes produced in 1984. Since this brand depends on a large amount of imported tobacco in its blend, imports of tobacco, particular from the United States, are expected to have steady growth in the future. Larger-than-desired production of domestic flue-cured tobacco has resulted in a substantial buildup of stocks. However, since consumption of foreign leaf for the past few years has been higher than imports, stocks of imported tobacco have declined. More imports are expected in the future, as imported stocks can no longer be drawn upon.

The United Kingdom's cigarette imports for the first 5 months of 1985 were 5.5 billion pieces, compared with 8.09 billion for all of 1984 and more than double the 2.55 billion imported in January-May 1984. The majority of the upsurge in imports have been from West Germany. These imported cigarettes have a considerable price advantage over domestically produced cigarettes. The retail price of these imported cigarettes is around 1.07-1.10 pounds per packs of 20 compared with comparable U.K. brands for which the recommended retail price varies between 1.20 and 1.35 pounds. These cigarettes are coming from West German plants with spare capacity arising from declining consumption. West German companies are reported to be maintaining production on very small margins for their export brands rather than cutting back their operations. In the United Kingdom, there have been a number of significant plant closures in the face of declining cigarette consumption.

The increasing impact of cheaper imported cigarettes on the market comes at time when the cigarette companies and the anti-smoking lobby are already gearing up for forthcoming negotiations with the government on cigarette advertising and sponsorship. The current voluntary restraints being operated by the industry will shortly come up for renegotiation and there are strong pressure from the British Medical Association and other anti-smoking groups for an extension of current restrictions on cigarette advertising and smoking publicity in general. The industry claims that advertising does not, in itself, lead to an increase in overall cigarette consumption, no matter how successful the campaign. The argument is that it simply encourages smokers to shift from one brand to another. The tobacco industry claims that if it cannot advertise British-produced cigarettes on at least the same basis as present, the cheaper imported cigarettes will take a larger share of the market, leading to further cutbacks in the U.K. tobacco industry without any reduction in cigarette smoking.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

Brazil's leaf exports during the 11-month period January to November 1984 were 170,000 tons, valued at $425 million. Exports for January-December 1984 are estimated at 189,000 tons, an increase of 6 percent from 1983. In 1985, leaf exports are forecast to decline to 170,000 tons.

Domestic consumption of tobacco continued to decline in 1984 following a trend that started in 1981; however, there has been an upward trend in cigarette consumption since the last quarter of 1984. Consumers have been switching from dark tobacco (cigars and cigarettes) to light-tobacco cigarettes.

In Malawi, with just under half of Malawi's 1985 tobacco crop marketed at auction floors, price prospects for the season as a whole are mixed. After a sluggish start, price levels for flue-cured tobacco have substantially increased in the past month. Burley prices opened relatively strongly but are weakening as lower quality leaf is presented. Fire-cured prices opened exceptionally weak on trade fears of overproduction, but have since stabilized as the Agricultural Development and Marketing Corporation (ADMARC) has signaled its intention to limit the size of this year's market crop by presenting only higher grade tobacco for sale at the auction floors.

As of July 11, 13 million kilograms of flue-cured tobacco had been marketed at an average price of MK2.47 (US$1.49) per kilogram, approximately the same dollar level as 1984. Flue-cured growers are generally pleased with the price developments, though many farmers complain that equivalent quality tobacco in Zimbabwe is bringing up to Z$5 per kilogram. Buyers agree that Malawi can match the quality of Zimbabwe flue-cured, but because of high transportation costs and the recent announced 10-percent export tax, Malawi prices are lower. Burley prices opened at strong levels in excess of MK2 per kilogram, but prices have since declined. As of July 11, 15.7 million kilograms of burley had been marketed at an average price of MK1.95 (US$1.18) per kilogram. While the price again matches last year's level in dollar terms, the trend has been downward, as most of the lower quality output of the smaller growers comes to the market last.

While smallholders harvested record crops of dark fire-cured tobacco this year, ADMARC has elected to limit the size of the marketed smallholder tobacco crop to approximately 17 million kilograms. Surplus lower grade tobacco purchased by ADMARC at its bush markets (estimated at 2 million kilograms) will be stored for resale in subsequent seasons. The effect of this decision on the marketplace has been generally favorable as fire-cured prices have not collapsed, though they remain well below those of prior seasons. As of July 11, 3.8 million kilograms of northern-division fire-cured had been marketed at an average price of MK1.77 (US$1.07) per kilogram. Meanwhile, 310,000 kilograms of southern division fire-cured had been sold at an average price of MK1.12 (US$0.68) per kilogram.

Thailand's 1984 tobacco exports reached a record level of 41,410 tons, up 17 percent over the 1983 level. Nearly half of the country's leaf production from 1984 was exported. Flue-cured accounted for 49 percent of exports, while the burley share was 27 percent with the balance being almost entirely native tobacco. The major export markets for the last 3 years have been the United States (21 percent), the European Countries (35 percent), and China (13 percent). Exports in 1985 are forecast to decline slightly to 40,100 tons, reflecting reduced production levels.

Total leaf imports in 1984 were 6,947 tons, up 50 percent from the low level of 1983, but far below the 12,820 tons imported in 1982. The United States is the sole supplier of flue-cured and burley tobacco to Thailand. The Thai tobacco monopoly is expected to increase its purchases for 1985 delivery to 7,600 tons, but this will be insufficient to arrest the decline in foreign leaf stocks.

The Zimbabwe flue-cured tobacco auction had marketed 55,418 tons of tobacco at an average price of Z$2.85 per kilogram (US$0.84 per pound) during the first 16 weeks of sales. This compares with 62,520 tons sold at an average price of Z$1.91 per kilogram (US$0.75 per pound) during the first 16 weeks of sales last year. Approximately 49 percent of the estimated 113,700-ton crop had been sold through the sixteenth week this year, compared to 52 percent of the 119,636 ton 1984 crop sold during a comparable period in 1984.

Sales on the floor of the single auction house in Harare have averaged 7.6 million pounds per week. During the busiest portion of the 1984 U.S. auction season, weekly sales averaged about 77 million pounds on over 300 auction floors, or about 250,000 pounds per floor per week.

U.S TOBACCO DEVELOPMENTS

On July 23, 1985, USDA approved a request of the Flue-cured Tobacco Cooperative Stabilization to reduce the 1985-crop flue-cured tobacco loan rate by 5 cents per pound and authorized rebates as incentives to purchase this kind of tobacco. The loan rate was lowered to $1.65 per pound as permitted by the Nunn admendment to make tobacco more price competitive.

The Stabilization Corporation was authorized to offer buyers of this year's crop a 10-cents per pound rebate from the no-net-cost tobacco fund at the beginning of the marketing season. The 10-cents rebate will further reduce the effective 1985 loan rate to $1.55 per pound.

Another rebate of 15 cents per pound has been authorized to be paid at the end of the marketing season on all purchases if two conditions are met. The first is that at least 650 million pounds of the 1985 flue-cured crop must be purchased during the season. The second condition is that at least 125 million pounds of the 1976-1984 flue-cured inventory must be purchased from the Flue-cured Tobacco Cooperative Stabilization Corporation, which are being offered at discount prices.

U.S. flue-cured auction prices through Aug. 7, 1985, through 8 days of sales were down compared to the same period last year. Prices this season have averaged $1.50 per pound with 67.4 million pounds being sold. The loan receipts totaled 11.5 million pounds or 17 percent of sales. On the Georgia-Florida markets, prices averaged $1.49 per pound, compared to $1.45 on the South Carolina-North Carolina border markets and $1.41 on the North Carolina eastern markets. Prices on the North Carolina-Virginia markets averaged $1.63 per pound which included carryover sales from the 1984 crop. Virginia auctions for the 1985 crop opened August 13.

During the first 8 days of sales last season, prices averaged $1.62 per pound with 83.9 million pounds being sold. Loan receipts totaled 14.4 million pounds or 17.2 percent of sales.

U.S. Tobacco Trade Outlook-U.S. unmanufactured tobacco exports during June 1985 were 6,838 tons, valued at $14 million, a drop of 49 percent in volume from June 1984. The low level of exports in June may have resulted from the uncertainty over the 1985 price support program and the high value of the U.S. dollar. Flue-cured exports during June dropped 63 percent, while burley exports increased 105 percent. Cumulative exports for January-June 1985 were 99,001 tons, valued at $640.4 million, down 1 percent in volume, but up 2 percent in value from last year. West Germany was the leading market with 16,066 tons, followed by Japan with 10,677 tons, Italy with 9,979 tons, Spain with 8,704 tons, and Thailand with 8,079 tons.

Flue-cured tobacco exports during June 1985 were 2,673 tons, valued at 18.6 million, down 63 percent in volume from June 1984. For January-June 1985, flue-cured tobacco exports were 48,194 tons, valued at $312.4 million, a drop of 12 percent in volume from the same period in 1984. The leading markets were West Germany (5,331 tons), Thailand (5,091 tons), and the United Kingdom (2,957 tons).

Burley exports during June were 1,826 tons, valued at $13.6 million, a jump of 105 percent in volume from June 1984. For January-June, burley exports were 33,642 tons, valued at $248.8 million, an increase of 50 percent over last year. Japan was the leading destination with 10,220 tons, followed by West Germany with 7,528 tons, Switzerland with 4,296 tons, Italy with 3,997 tons and Thailand with 2,985 tons.

Exports of other types (excluding flue-cured and burley) during January-June 1985 were 17,165 tons, valued at $79 million, down 24 percent in volume from a year ago. Stems, trimmings, and scrap, which accounted for 62 percent of exports of other types, dropped 23 percent from last year.

Cigarette exports during June 1985 were 2.76 billion pieces, valued at $55.2 million, a drop of 42 percent in volume from June 1984. Cumulative exports for January-June were 25.7 million, valued at $517 million, down 3 percent in volume from a year ago. Leading markets were Belgium-Luxembourg (3.66 billion pieces), Hong Kong (3.64 billion pieces), Saudi Arabia (3.63 billion pieces), Japan (2.7 billion pieces), and Singapore (1.5 billion pieces).

Unmanufactured tobacco imports for consumption (duty paid) for June 1985 were 15,420 tons, valued at $40.6 million, up 45 percent in volume from June 1984. Stemmed cigarette leaf imports increased 116 percent to 4,028 tons, while flue-cured leaf (unstemmed) jumped 89 percent to 3,237 tons. Oriental imports were up 8 percent to 3,602 tons. Imports from Brazil during June increased 137 percent to 6,229 tons. Other major sources of imports during June were Turkey (2,222 tons), Greece (1,189 tons), Mexico (992 tons), and Argentina (827 tons).

For January-June 1985, imports for consumption were 92,707 tons, valued at $270.3 million, up 4.5 percent from last year. Stemmed cigarette leaf imports were up 27 percent to 24,058 tons, while oriental leaf imports were up 7 percent to 37,597 tons. Imports from Brazil were 20,086 tons, up 124 percent from last year. Other major sources of imports were Turkey (24,542 tons), Greece (7,585 tons), Argentina (3,576 tons), Italy (3,519 tons), and Malawi (3,294 tons).

General imports (actual arrivals) of unmanufactured tobacco for June 1985, were 24,799 tons, valued at $69.9 million, up 2 percent in volume over June 1984. The leading sources of imports during June were Brazil (7,553 tons), Greece (4,544 tons), Turkey (2,986 tons), and Argentina (2,082 tons). For January-June, general imports were 112,730 tons, valued at $314.9 million, a decline of 5 percent in volume from a year ago. Oriental imports were down 17 percent, while other cigarette leaf imports dropped 9 percent. The leading sources of imports for January-June were Turkey (32,125 tons), Brazil (24,556 tons), Greece (12,042 tons), Belgium (4,596 tons), and Italy (3,773 tons).

Special Report: World Tobacco Supply and Distribution

World stocks levels on Jan. 1, 1985 reached a record high 7.19 million tons; however, the increase was less than 1 percent above the Jan. 1, 1984 level. World tobacco consumption recovered during 1984, increasing 5 percent compared to a 3-percent decline in 1983. A 5-percent increase in world leaf production in 1984 offset the higher consumption. World tobacco exports increased 2 percent, compared to a drop of 3 percent in 1983.

World leaf consumption in 1984 was 5.63 million tons, a record high and 269,114 tons greater than in 1983. China, the world 's largest tobacco consumer, had a 9-percent increase in leaf usage, reflecting in a 9.7-percent rise in cigarette output. In Europe, North America, and Japan, consumption continues stagnant because of cigarette tax increases and continuing anti-smoking campaigns. Increased consumption occurred in many Asian and South American countries as a result of large population growth, increased urbanization, and higher consumption of factory-produced cigarettes.

World tobacco stocks levels only increased 10,879 tons during 1984. Small rises in stock occurred in China, the United States, India, and Turkey. The only significant stocks increase was in the Philippines, which increased 48 percent during 1984. Italy, the Netherlands, and United Kingdom recorded declines in stocks of 12 percent, 12 percent, and 8 percent, respectively.

World leaf trade during 1984 remained near the 1983 levels. Brazil, Italy, the United States, and Greece had increases in tobacco exports of 7 percent, 20 percent, 3.6 percent, and 20 percent, respectively. Indian leaf exports recorded a slight decline, while Zimbabwe shipments were down 8 percent. Of the major importing countries, West Germany and the United Kingdom had slight increases in imports, while Japan, the Netherlands, and the United Soviet Socialist Russia recorded significant declines.

World leaf production in 1985 is forecast at 5.65 million tons (dry weight), a drop of 1 percent from 1984. Increases in production are expected in China, Indonesia, and Bulgaria, while declines are expected in Zimbabwe, Brazil, the Soviet Union, and the United States. World flue-cured is forecast to be slightly above last year's crop, while burley output is expected to fall 8 percent. World oriental production may be slightly above last year's output.

Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture's** telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture.**

Subscribe today! Just $16.00 ($20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

Special Report: World Leaf Tobacco Trade in 1984

Summary and Principal Trading Countries.....18
Statistical Tables.....24

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World unmanufactured tobacco exports increased over 2 percent in 1984 to 1,402,115 tons. Reasons for the increase include higher world consumption with an expanding world economy, lower stock levels in importing countries and in many countries, lower prices.

In 1985, world unmanufactured tobacco exports are expected to expand further from the 1984 level. The continuing improvement in the world economy and higher consumption will help to increase exports to near-record levels.

U.S. unmanufactured tobacco exports during July 1985 were 9,485 metric tons, valued at $55 million, an increase of 14 percent in volume from July 1984, and up 39 percent from export levels of a month earlier. The higher exports are mainly a result of higher burley exports--flue-cured exports were still depressed. Exports for January-July 1985 were 108,486 tons, valued at $695 million, up 1/2 percent in volume, but up 1 1/2 percent in value from last year.

Unmanufactured tobacco imports for consumption (duty paid) for July 1985 were 16,073 tons, valued at $47.7 million, down 29 percent in volume from July 1984. For January-July 1985, imports for consumption were 108,780 tons, valued at $318.0 million, down 4 percent from last year. General imports (actual arrivals) of unmanufactured tobacco for July 1985 were 9,650 tons, valued at $28.5 million, down 61 percent in volume over July 1984. January-July general imports were 99,370 tons, valued at $307.9 billion, a decline of 20 percent in volume from a year ago.

Based on the trade levels of the first 7 months and current indications the export estimate for 1985 has been lowered from 245,000 tons to 235,000 tons. Burley exports will be substantially above 1984 while the level of flue-cured exports will likely be lower. The estimate for general imports (arrivals) has also been lowered--now at 200,000 tons down from the previous estimate of 210,000 tons.

World Tobacco Highlights include:

Japanese tobacco imports for May 1985
Korean tobacco trade for June 1985
Swiss trade report
China tobacco production revised upward
Zimbabwe flue-cured tobacco auction market remains strong
Drought Reduces Yugoslav Tobacco Production

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Japanese tobacco imports from January to May 1985 were running at a total of 37,595 tons, with a total c.i.f. value of approximately $235 million. Leading suppliers were the United States with 27,451 tons, Turkey with 4,757 tons, Thailand with 1,300 tons, and the Republic of Korea with 1,071 tons.

Japanese cigarette imports from January to May 1985 totaled over 2.7 billion pieces, valued at approximately $38 million. The United States was the largest supplier, with 2.5 billion pieces, worth approximately $35 million. followed by the United Kingdom, with nearly 200 million pieces arriving from January to May, with a value of nearly $3 million.

Korean unmanufactured tobacco exports for the first half of 1985 were 14,513 tons, with a c.i.f. value of $46.3 million. The leading customers were the Federal Republic of Germany with 4,313 tons, the United Kingdom with 2,002 tons, the United States with 1,638 tons, and Belgium/Luxembourg with 1,260 tons.

Swiss trade figures for January-June 1985 show total imports at 11,134 tons, valued at approximately $45 million, with June's imports at 2,536 tons, valued at around $10 million. The largest suppliers were the United States with 450 tons, Brazil with 405 tons, Argentina with 393 tons, and Italy with 363 tons. Export figures totaled 2,728 tons for January to June 1985, with an approximate value of $14 million, and 303 tons for June, valued at around $1.5 million. The biggest customer was the Netherlands, with 62 tons.

World Developments Affecting Tobacco Supply

Reports from Beijing recently revised China's production estimates for flue-cured and burley tobacco, resulting in an increase of 7.5 percent in total unmanufactured tobacco for 1984, or 123,000 tons to 1,772,995 tons, and a projected increase of nearly 10 percent for 1985, or 169,000 tons to 1,939,000 tons. This has not dramatically changed China's export prospects for tobacco, as all of the increased production is going to consumption and increased stock levels. Chinese cigarette production has been increasing an average of 9 percent annually for the past few years, so the increased production is not out of line with projected needs. Chinese tobacco stock levels are now equal to about 9 1/2 months of consumption.

Yugoslavia's leaf tobacco production was reduced by a severe drought in August. Reports indicate output was reduced by 22 percent, or 17,000 tons, to 62,000 tons (farm sales weight). Hardest hit is the oriental tobacco producing areas of Macedonia, where production is off 32 percent. Lowered production will most likely mean increased import demand for fermented tobacco, and lower oriental tobacco exports. The impact on U.S. tobacco trade is very small, as the U.S. market supplies mostly flue-cured and burley varieties.

The Zimbabwe flue-cured tobacco auction had marketed 75,412 tons of tobacco at an average price of Z$2.80 per kilogram (US$0.83 per pound) during the first 21 weeks of sales (Aug. 28, 1985). This compares with 85,257 tons sold at an average price of Z$2.02 per kilogram (US$0.79 per pound) during the first 21 weeks of sales last year. Approximately two-thirds of the estimated 113,000-ton crop had been sold through the end of August this year. This compares with 71 percent of the 119,636 ton 1984 crop sold during a comparable period in 1984. Given the current pace of sales, the auction should finish in late October.

U.S TOBACCO DEVELOPMENTS

The U.S. tobacco crop was estimated at 693,500 tons in a report released by USDA on September 11 and based on conditions that existed on September 1. The revised estimate is 10 percent below the 1984 crop and 1 per cent above the August estimate of 687,000 tons. Significant increases were noted in the September estimates for Kentucky and Maryland, when compared with the August estimates. The September report estimates production by state but not by type. The current estimates by state are shown below with the August estimates and 1984 production.

U.S. TOBACCO PRODUCTION
BY STATE (MILLION POUNDS)

STATES	1984 Prod.	1985 Estimate Aug. 12	1985 Estimate Sept. 11
North Carolina	590,026	550,390	544,940
Kentucky	530,088	420,080	434,930
Tennessee	154,646	136,560	136,680
South Carolina	105,515	101,200	101,200
Virginia	115,897	96,765	97,128
Georgia	85,500	83,250	83,250
Maryland	30,360	24,150	27,300
Others	115,274	102,045	103,169
Total Tobacco	1,727,306	1,514,440	1,528,597

U.S. flue-cured Tobacco Auction prices through Sept. 9, 1985, (26 sales days) averaged $1.63 per pound for a total of 384.3 million pounds. Loan receipts had totaled 84.0 million pounds or 21.9 percent of sales. Daily sales on September 9, totaled 22.5 million pounds and averaged $1.78 per pound. The amount going under loan was 12.4 percent or 2.8 million pounds.

The percentage of tobacco going under loan has been falling steadily in recent days as smaller quantities of lower plant leaves--referred to as lugs and primings--and more upstalk tobacco is offered. The upstalk grades are more in demand by export customers.

During the first 26 days of sales last season, prices averaged $1.77 per pound with 459.5 million pounds being sold. Loan receipts during the comparable period in 1984 totaled 71.6 million pounds or 15.6 percent of sales.

Unmanufactured tobacco imports from the Caribbean Basin Initiative countries are running substantially below the record levels of 1984. Guatemala, the Dominican Republic, and Honduras remain the leading suppliers. The table on the following page summarizes imports from the CBI countries for the first 7 months of 1985 with comparisons with 1984.

Import Inspections Report for January-June 1985: The Agricultural Marketing Service, USDA, in their July 1, 1985, Tobacco Stocks Report (TOB 111) indicated 95.7 million pounds of flue-cured and burley tobacco were imported during the first two quarters of calendar year 1985. The imports are listed below by major types and suppliers.

Summary of Imported Tobacco Inspections

	Jan-Mar	Apr-Jul	Total to date
	Million pounds		
Flue-cured:			
Brazil	14.36	28.18	42.54
Canada	4.93	0.23	5.16

Canada	0.04	0.59	0.64
Other	0.04	0.00	0.04
Total	0.08	0.59	0.67
Grand Total Imports	35.92	60.95	96.87

Note: Imported tobacco is subject to the same inspection procedures as domestic leaf and standard U.S. grades are applied. Details may not add due to rounding.

Notice: Customs changes import classifications for tobacco:

Effective July 1, 1985, U.S. Customs has made a further detailing of imported tobacco. Two commodities were each broken out into two further codes. The changes are as follows:

Old code:	170.3500	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed:
New codes:	170.3510	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed: Flue-cured:
	170.3520	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed: not specially provided for:
Old code:	170.8045	Tobacco, manufactured or not manufactured, not specially provided for (other).
New codes:	170.8050	Tobacco, manufactured or not manufactured, except smoking tobacco in retail packages, flue-cured.
	170.8070	Tobacco, manufactured or not manufactured, not specially provided for (other).

The commodity changes have been noted in the U.S. trade summary tables that follow. The old commodity classifications will still be contained in the tables for imports for comparison purposes.

U.S. Tobacco Trade Outlook U.S. unmanufactured tobacco exports during July 1985 were 9,485 tons, valued at $55 million, an increase of 14 percent in volume from July 1984, and up 39 percent from export levels of a month earlier. The higher exports are mainly a result of higher burley exports as movement of the superior 1984 crop continues. Burley exports were nearly triple the July figures of a year earlier, while flue cured exports were still depressed, off 35 percent.

Cumulative exports for January-July 1985 were 108,486 tons, valued at $695 million, up 1/2 percent in volume, but up 1 1/2 percent in value from last year. West Germany was the leading market with 17,330 tons, followed by Japan with 10,677 tons, Italy with 10,276 tons, Spain with 10,211 tons, and Switzerland with 8,419 tons.

Flue-cured tobacco exports during July 1985 were 3,515 tons, valued at $23.7 million, down 35 percent in volume from July 1984. For January-July 1985, flue-cured tobacco exports were 51,709 tons, valued at $336 million, a drop of 14 percent in volume from the same period in 1984. The leading markets were Spain with 7,882 tons, West Germany with 7,568 tons, Italy with 5,331 tons, and Thailand with 5,091 tons.

Burley exports during July were 1,641 tons, valued at $11.8 million, a jump of 190 percent in volume from July 1984. For January-July, burley exports were 35,283 tons, valued at $260.7 million, an increase of 54 percent over last year. Japan was the leading destination, with 10,220 tons, followed by West Germany with 7,828 tons, Switzerland with 4,677 tons, Italy with 4,043 tons, and Thailand with 2,985 tons.

Exports of other types (excluding flue-cured and burley) during January-July 1985 were 21,493 tons, valued at $98 million, down 14 percent in volume from a year ago. Stems, trimmings, and scrap, which accounted for 60 percent of exports of other types, dropped 12 percent in volume from last year.

Outlook: The pace of exports for the balance of the calendar year is expected to slow with shipments for the year ending somewhat below the 246,156 tons shipped during 1984. The export estimate has been lowered from 245,000 tons to 235,000 tons. Burley exports will be substantially above 1984 while the level of flue-cured exports will likely be lower.

Cigarette exports during July 1985 were 4.00 billion pieces, valued at $79.4 million, a drop of 18 percent in volume from July 1984. Cumulative exports for January-July were 29.8 billion, valued at $596.6 million, down 5 percent in volume from a year ago. Leading markets were Saudi Arabia with 4.45 billion pieces, Belgium-Luxembourg with 4.36 billion, Hong Kong with 4.04 billion, Japan with 3.39 billion, and Singapore with 1.75 billion pieces.

Unmanufactured tobacco imports for consumption (duty paid) for July 1985 were 16,073 tons, valued at $47.7 million, down 29 percent in volume from July 1984. Stemmed cigarette leaf imports (other than oriental) were about steady at 5,190 tons. Imports of flue-cured leaf (unstemmed) were off 66 percent to 851 tons, while unstemmed burley fell 84 percent to 433 tons. Oriental imports fell 21 percent to 5,895 tons.

For January-July 1985, imports for consumption were 108,780 tons, valued at $318.0 million, down 4 percent from last year. Stemmed cigarette leaf imports (other than oriental) were up 20 percent to 29,789 tons, while oriental leaf imports fell 21 percent to 5,895 tons.

General imports (actual arrivals) of unmanufactured tobacco for July 1985 were 9,650 tons, valued at $28.5 million, down 61 percent in volume over July 1984. January-July general imports were 99,370 tons, valued at $307,868 million, a decline of 20 percent in volume from a year ago. Oriental imports were down 26 percent, while other cigarette leaf imports dropped 16 percent.

Outlook: Imports in both the duty-paid and arrival categories are expected to maintain the current pace and end the calendar year below levels registered a year ago. The estimate for general imports (arrivals) has been lowered from 210,000 tons to 200,000 tons.

COMMODITY PROGRAMS, FAS, USDA

1/ MAY NOT INCLUDE TOBACCO INCLUDED UNDER TARIFF CATEGORIES 170.3510 AND 170.3520.
2/ CUSTOMS CLASSIFICATIONS CHANGES EFFECTIVE JULY 1985.

SPECIAL REPORT: WORLD LEAF TOBACCO TRADE IN 1984

World unmanufactured tobacco exports increased over 2 percent in 1984 to 1,402,115 tons. Reasons for the increase include higher world consumption with an expanding world economy, lower stock levels in importing countries and in many countries, lower prices. Major leaf exporters with increases were Brazil 6 percent, Canada 9 percent, Greece 12 percent, Italy 21 percent, Malawi 40 percent, and the United States 3 1/2 percent. Lower trade occurred in Argentina, 14 percent, the Dominican Republic 13 percent, the Federal Republic of Germany 12 1/2 percent, Guatemala 35 percent, India 3 1/2 percent, the Republic of Korea 9 percent, Yugoslavia 36 percent and Zimbabwe with 8 percent.

In 1985, world unmanufactured tobacco exports are expected to expand further from the 1984 level. The continuing improvement in the world economy and higher consumption will help to increase exports to near-record levels.

Trade with importing countries also increased during 1984. Major increases among important importing countries were noted in the United Kingdom, which increased imports by 21 percent, to 149,651 tons, Denmark up 91 percent to 15,560 tons, and Thailand which had an increase of 540 percent to 29,670 tons. Declines in imports among major traders included the United States, down 21 percent to 188,758 tons, and the Federal Republic of Germany, down 17 percent to 138,128 tons.

Principal Trading Countries

The United States unmanufactured tobacco exports in 1984 were 246,156 tons, valued at $1.51 billion, up 3 1/2 percent in quantity and the same in value from the 1983 level. Flue-cured exports were up 13 percent, while burley exports were off 19 percent. Burley's decline was due to the relative poor quality of the 1983 crop.

Unmanufactured imports for consumption (including the category "tobacco manufactured or not manufactured, not specially provided for (NSPF)", in 1984 were 188,758 tons valued at $558 million, off 21 percent in quantity, and 25 percent in value from 1983. The large decrease has much to do with abnormally high imports in 1983 prior to a tariff reclassification, and relatively high U.S. stock levels.

Unmanufactured tobacco general imports including the NSPF category in 1984 were 212,957 tons, valued at $629 million, up 2 percent in quantity but off 1 percent in value. The major decline was in the NSPF category, which fell from 49,198 tons in 1983 to 973 in 1984. This was made up by a large increase in the "other cigarette leaf" categories, going from 10,661 tons in 1983 to 68,352 tons in 1984.

Canada's exports of unmanufactured tobacco increased to 26,080 tons, up 9 percent from the 1983 level, tons. Exports to the United Kingdom, Canada's most important market, were 16,148 tons, valued at US $97,413,000, up 4 percent in quantity from a revised 15,510 tons in 1983. The United States, Canada's second most important market, took 7,264 tons in 1984, valued at US$19,256,000. This was down 15 percent in quantity and 24 percent in value from year-earlier levels.

Argentina's unmanufactured exports in 1984 fell to 24,963 tons, 14 percent down from 1983's 29,156 tons, and the lowest level in 3 years. Flue-cured exports stayed level, at 19,100 tons, but burley exports dropped to only 3,300 tons. Sales to the United States dropped 48 percent from 5,349 to 3,841 tons.

Brazil's leaf tobacco exports in 1984 were 187,438 tons, valued at $460.5 million, up 6 percent in quantity, but down 1 percent in value from the 1983 levels. Exports are projected downward in 1985 to 170,000 tons. In 1984, the leading markets were the United States, with 52,358 tons, the United Kingdom with 29,709 tons, the Federal Republic of Germany with 17,082 tons, the Netherlands with 13,463 tons, and France with 9,667 tons.

Italy's leaf tobacco exports in 1984 were up 21 percent in volume to 96,787 tons, valued at $104.9 million. Burley and oriental tobacco accounted for most of the increase. Major markets were Bulgaria, with 25,177 tons, the Federal Republic of Germany with 16,504 tons, the Netherlands with 7,956 tons, and the United States with 7,954 tons. Exports in 1985 are forecast down 7 percent to 90,000 tons due to projected decreased production.

Italian leaf imports in 1984 decreased sharply in 1984, down 29 percent to 24,448 tons. More than half of the imports were the high value flue-cured tobacco, the rest was mostly burley. Imports from the United States were 11,975 tons, off 24 percent from 1983 levels. Imports from Brazil dropped by 58 percent to 3,735 tons.

Greece's exports in 1984 were 87,825 tons valued at $180.7 million, up 12 percent in quantity and down 7 1/2 percent in value. Burley had an average value of $2.55 per kilogram, and oriental had an average value of $2.04 per kilogram. Major customers were the United States, with 13,492 tons, the Soviet Union with 12,287 tons, Bulgaria with 7,816 tons, and Egypt with 6,773 tons. Exports in 1985 are forecast to increase to 108,000 tons.

Leaf imports in 1984 were 5,702 tons, compared with a revised 5,602 tons in 1983. The major sources were the Netherlands, with 2,017 tons, and the Federal Republic of Germany with 1,103 tons.

The United Kingdom's imports of unmanufactured tobacco in 1984 were 149,651 tons, up 21 percent from a revised 123,318 tons in 1983. The value was placed at $423.5 million. Major sources of imports were Brazil with 44,848 tons, India with 23,426 tons, the United States with 16,148 tons, and Zimbabwe with 15,108 tons. Imports are projected to decline in 1985 to around 125,000 tons as cigarette consumption continues to decrease.

The Federal Republic of Germany's unmanufactured tobacco imports went down in 1984 by 17 percent in volume to 138,128 tons valued at $463.6 million. Total value of imports went down by 19 percent, however, compared to the 1983 level. Major sources were the United States, with 29,816 tons, Italy with 18,730 tons, Brazil with 15,521 tons, and Greece at 8,475 tons. "Virginia style" flue-cured imports totaled 48,746 tons, burley imports were 29,883 tons, and oriental imports were 40,478 tons.

German leaf exports in 1984 totaled only 13,399 tons, off 12 1/2 percent from the 1983 level of 15,308 tons. Major destinations were the United States, with 3,901 tons, France with 2,462 tons, and the Netherlands with 2,075 tons.

The Netherlands' unmanufactured tobacco imports in 1984 totaled 82,326 tons valued at $281.1 million, down 10 1/2 percent in value and volume from 1983. Leading sources were the United States, with 15,997 tons, Brazil with 10,764 tons, Malawi with 7,780 tons, and Italy with 6,164 tons.

Dutch "Virginia type" flue-cured imports were 33,493 tons in 1984. The leading suppliers were the United States, with 7,573 tons, Brazil with 7,244 tons, and Zimbabwe with 5,301 tons.

Burley imports by the Netherlands in 1984 were 10,871 tons. The leading sources were Malawi, with 2,776 tons, the United States with 2,683 tons, Italy with 1,807 tons and Belgium/Luxembourg with 1,711 tons.

France unmanufactured tobacco imports in 1984 totaled 65,081 tons, valued at $92.0 million. Import volume levels are up 6 1/2 percent over 1983, and up 20 percent in dollar terms. Major suppliers are Brazil, with 9,193 tons, the United Kingdom with 6,587 tons, Greece with 4,584 tons, and Turkey with 4,379 tons.

French imports of dark tobaccos accounted for 15,616 tons. The major suppliers were Brazil (5,016 tons), Paraguay (3,531 tons), Argentina (2,742 tons), and Indonesia (1,801 tons).

Oriental tobacco imports by France amounted to 9,097 tons in 1984. Major sources were Turkey and Bulgaria, with 4,281 and 2,362 tons, respectively. Tobacco refuse came into France at the rate of 24,611 tons in 1984.

Spain's unmanufactured tobacco imports were 71,115 tons in 1984, up just slightly from revised 1983 figures of 70,851 tons. Value increased 21 percent. Major sources continue to be the United States, the Dominican Republic, and Cuba, with 29,905, 10,356, and 7,778 tons, respectively. The U.S. share of the market rose from 34 percent to 42 percent from 1983 to 1984. Imports in 1985 are forecast to decrease slightly to 70,500 tons.

Switzerland's imports of leaf tobacco declined again in 1984, by 7 percent to 19,896 tons. Leading suppliers were the United States, with 5,418 tons, Brazil with 2,924 tons, Italy with 1,767 tons, and the Federal Republic of Germany with 1,629 tons. U.S. market share declined from 30 to 27 percent. Imports are projected to increase in 1985 to around 23,000 tons, as the export market for cigarettes and cigars will likely improve.

Yugoslavia's exports of unmanufactured tobacco were estimated at 18,000 tons in 1984, down some 36 percent from the 1983's level. The poor 1983 oriental crop, which was mostly unsuitable for export purposes, was the major reason for the decline. The United States was the leading importer with 6,166 tons, followed by Czechoslovakia, the Soviet Union, and the Federal Republic of Germany. Exports for 1985 are projected to fall again from the 1984 level due to a drought in the oriental growing areas of Macedonia. (See Factors Affecting World Tobacco Supply, this issue.)

India's exports of leaf tobacco decreased by 3 1/2 percent in 1984 to 80,687 tons, valued at $147.6 million. Leading customers were the Soviet Union with 29,723 tons, the United Kingdom with 14,710 tons, Egypt with 5,920 tons, and Saudi Arabia with 5,270 tons. Exports for 1985 are forecast at 85,000 tons, up 6 percent from 1984.

Belgium/Luxembourg had unmanufactured tobacco imports in 1984 of 35,887 tons, valued at $122.9 million. This was down in quantity and value from 1983 by 8 percent. Leading suppliers were the Netherlands, with 8,426 tons, the United States with 5,849 tons, Brazil with 3,407 tons and Zimbabwe with 2,651 tons.

"Virginia type" flue-cured imports into Belgium/Luxembourg were 12,158 tons, or one-third of total imports. Leading sources were Zimbabwe with 2,651 tons, the United States with 2,560 tons, the Netherlands with 1,776 tons, and Brazil with 1,680 tons.

Japan's unmanufactured tobacco imports in 1984 declined by 5 1/2 percent to 75,513 tons, valued at $434.3 million. The decline is a result of stagnant demand, and the continuation of a policy Japan Tobacco Inc. has had to decrease imports of leaf similar to that which can be grown domestically. The U.S. market share increased in 1984, moving from 56 to 61 percent. The leading sources of tobacco for Japan are the United States, with 45,771 tons, Greece with 6,922 tons, Turkey with 5,262 tons, and Malawi with 3,243 tons. Imports are again forecast to decline for 1985, to 69,700 tons.

The Republic of Korea's 1984 leaf exports were 30,009 tons, down 8 percent in volume from 1983 level. Total value was down nearly the same, to $100.4 million. Burley exports were 15,677 tons, up slightly from 1983 figures. The share of burley exports reached over 50 percent of tobacco exports for the first time in 1984. The United States took 35 percent of burley exports in 1984, or 5,516 tons. Other major markets for Korean burley were the Federal Republic of Germany with 4,181 tons, Italy with 1,666 tons and Japan with 1,089 tons.

Flue-cured tobacco exports in 1984 totaled 14,332 tons, down 17 percent from year earlier figures. Major destinations were the United Kingdom with 4,162 tons, the Federal Republic of Germany with 2,324 tons, the United States with 1,662 tons, and Italy with 1,194 tons.

The Republic of the Philippines' leaf tobacco exports in 1984 were 21,270 tons, up 3 percent from the 1983 level. Value was down by 15 percent to $28.1 million, as quality continues to be a concern among buyers. Flue-cured exports were 10,747 tons, up by 13 percent over 1983. The Federal Republic of Germany continues to be the largest buyer of flue-cured leaf, accounting for 2,809 tons. Next was Egypt with 2,750 tons, followed by the United Kingdom with 1,468 tons. Total value for flue-cured exports was $14.5 million. Imports of flue-cured leaf were to 5,766 tons, off 41 percent from a year earlier.

Only two countries, the United States and Belgium/Luxembourg, bought burley leaf from the Philippines in 1984. Total exports of burley were 795 tons. Burley imports totaled 1,894 tons, with the Unites States supplying 1,761 tons. Native tobacco exports were 9,728 tons, off 3 percent. Major buyers were Spain with 3,731 tons, the United States with 1,643 tons, Japan with 1,118 tons, and France with 1,109 tons.

Thailand's unmanufactured leaf exports in 1984 were 37,341 tons valued at $64.8 million, up 5 percent in volume and down 15 percent in value over 1983. The largest buyers were the United States with 7,644 tons, the Federal Republic of Germany with 8,640 tons, China with 4,069 tons, and Belgium/Luxembourg with 3,771 tons. Exports for 1985 are forecast at 40,000 tons.

Thai exports of flue-cured were nearly even with last year's levels, at 20,141 tons in 1984. Major markets were the People's Republic of China, with 4,069 tons, and Belgium/Luxembourg with 2,443 tons.

Thai burley exports were up 27 percent over 1983 levels, at 11,205 tons. The United States was the leading buyer with 5,002 tons. Dark leaf exports also rose substantially in 1984 to 9,891 tons, 63 percent over 1983. The Federal Republic of Germany was the largest buyer, taking 6,557 tons.

Thailand had tobacco imports totaling 29,670 tons in 1984, a sharp increase over the 1983 level of 4,634 tons. Imports are expected to drop to 7,000 tons this year as stock levels are at normal levels.

Turkey had unmanufactured tobacco exports in 1984 of 69,859 tons, valued at $216.5 million, about the same in volume, but down 9 percent in dollar terms, due mostly to the stronger dollar. Major customers were the United States with 41,325 tons. The U.S. market share increased to 59 percent compared to 56 and 48 percent in 1983 and 1982, respectively. The Federal Republic of Germany was the second largest market with 6,496 tons, followed by France with 4,254 tons, and Japan with 3,691 tons.

Zimbabwe's leaf exports were 87,447 tons, down 6 percent from the revised 1983 figure of 93,178 tons. The leading destination was the United Kingdom, which took 16,201 tons, followed by the Federal Republic of Germany with 6,157 tons, and the Netherlands with 5,696 tons. Exports for 1985 are projected at 105,000 tons.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

Japanese imports of American cigarettes during January-July declined less than 1/2 percent in quantity to 3.7 billion pieces. The value was off 4.2 percent to $51.2 million when compared to the same period last year. Imports of cigarettes from other countries totaled only 296 million for the same period. At the same time, Japan Tobacco Inc.'s domestic cigarette sales also fell in volume to 169 billion pieces, down 0.7 percent. As a result, the U.S. share of the Japanese cigarette market increased slightly to just over 2.1 percent.

Swiss unmanufactured tobacco imports for July 1985 totaled 2,182 metric tons, worth approximately $9.7 million. The largest suppliers were the United States, with 629 metric tons, followed by Brazil with 498 tons, Thailand with 203 tons, and the Philippines with 139 tons. January-July imports were 13,336 metric tons, with a value of $57.2 million. Exports totaled 3,004 tons for January to July 1985, with an approximate value of $16.6 million. July exports were 275 tons valued at $1.7 million. Italy was the largest customer, taking 122 tons. January to July exports of cigarettes were 5,959 metric tons, with a value of $39.7 million. Cigarette exports in July totaled 966 metric tons, valued at $5.9 million. The largest customers were Iran, with 189 tons, the Netherlands with 126 tons, and Sweden with 100 tons.

On September 19, a major United Kingdom cigarette manufacturer announced the permanent reduction of 429 workers from four of its plants. Three of the plants are in Durham, where the job losses number 292; the other is in Northern Ireland involving 137 workers. The announcement comes after a 1,200 job cut by the same company earlier this year. This brings job reductions in the U.K. cigarette industry to nearly 5,200 this year. Cigarette output in the U.K. has fallen from 155.6 billion pieces in 1980 to 130.5 billion pieces in 1984. Increased taxes and an active anti-smoking program are responsible for the decline. This trend in the long run will decrease exports of United States unmanufactured tobacco to the United Kingdom.

Imports of unmanufactured tobacco into the United Kingdom for January to July 1985 totaled 73,053 tons, valued at approximately $129.6 million. For July, imports totaled 13,331 tons, valued at around $36.8 million. Leading suppliers were Brazil, with 5,521 tons, India with 1,958 tons, Italy with 1,115 tons, and Thailand with 1,007 tons. Leaf exports totaled 3,307 tons from January to July, at a value of around $6.4 million.

Manufactured tobacco imports totaled 16,306 tons from January to July, valued at around $96.6 million. For July, imports totaled 2,383 tons, valued at $14.2 million. Cigarette imports were the largest category, with the Federal Republic of Germany sending 900 million cigarettes in July, valued at around $6.9 million. Year to date imports from Germany totaled 4.8 billion pieces, valued at about $35.8 million. Exports of manufactured tobacco amounted to 33,178 tons, valued at approximately $393 million. For July, the amount exported was 4,835 tons, with a value of about $62.8 million. Again, cigarettes composed the largest single category. The largest customers for July were; Belgium-Luxembourg, with 727 million pieces, Saudi Arabia with 642 million pieces, and the Netherlands, with 570 million pieces.

World Developments Affecting Tobacco Supply

On October 8, 1985, the Supreme Court of Canada ruled that the National Farm Products Marketing Council (NFPMC) must reopen public hearings on a proposal to establish a National Tobacco Marketing Agency. The ruling follows an injunction application by the Canadian Tobacco Manufacturers Council in late September.

Reportedly the Canadian Department of Justice is considering exercising appeal procedures on behalf of the NFPMC. It has thirty days in which to do so. If there is no appeal, they are expected to proceed with the reopening of public hearings. This development would likely result in a lengthy delay since the NFPMC could revise its findings and recommendations to the minister of Agriculture.

Regardless of the outcome of the legal issue, the chances for Canadian tobacco growers to establish a National Marketing Agency this calendar year are dimming.

Through September 26, 1985, Malawi's flue-cured auction sales totaled 21.9 million kilograms at an average price of 2.43 kwachas (US $1.37) per kilogram. For the same 24-week period in 1984, sales were 24.2 million kilograms at an average price of 2.27 kwachas (US $1.10) per kilogram. Burley sales for the 24th week ending September 26, 1985, totaled 28.6 million kilograms at an average price of 1.84 kwachas (US $1.04) per kilogram. Compared with marketings through the 24th week of 1984, burley marketings totaled 29.9 million kilograms at an average price of 1.73 kwachas (US $1.20) per kilogram.

Sales of fire-cured tobacco (all-divisions), totaled 10.9 million kilograms through the 24th week of marketing. Average prices for all divisions remained steady although weekly prices were considerably lower. Northern-division fire-cured (main-crop) marketings totaled 9.2 million kilograms bringing an average price of 1.68 kwachas (US $0.95) per kilogram. Northern-division fire-cured (lower leaf) marketings through the 24th week have totaled 1.2 million kilograms at an average price of .91 kwacha (US $0.52) per kilogram. Marketings of southern-division fire-cured totaled 591,057 kilograms at average price of .96 kwacha (US $0.54) per kilogram.

Total marketings of all tobacco types was 62.8 million kilograms bringing an average price of 1.97 kwachas (US $1.12) per kilogram. Marketings and prices at the same period 1984 were 70.2 million kilograms and 2.03 kwachas(US $1.43) per kilograms, respectively.

The Agricultural Attache in Lagos, Nigeria recently reported a return to a more normal tobacco supply situation. This is the result of an increase in the 1985 crop estimate for tobacco, from 10,700 to 12,788 metric tons (farm sales weight). Nearly ideal weather conditions and higher than anticipated plantings have contributed to the increase. As a result, consumption is expected to increase, to 8,500 tons, and stock levels are expected to be near normal. The drought last year reduced stocks to nearly zero.

The Zimbabwe flue-cured tobacco auction had marketed 91,941 metric tons of tobacco at an average price of Z$2.78 per kilogram (US $0.80 per pound) during the first 25 weeks of sales (Sept. 25, 1985). This compares with 104,000 metric tons sold at an average price of Z$2.08 per kilogram (US $0.73 per pound) during the 25th week of sales last year. Based upon current crop estimates through the 25th week, 92 percent of the 113,000-ton crop has been sold. This compares with 87 percent of the 119,636 ton 1984 crop sold during a comparable period in 1984. Sales are expected to be completed by the last week in October.

U.S TOBACCO DEVELOPMENTS

U.S. flue-cured Tobacco Auction prices through October 10, 1985, (45 sales days) averaged $1.71 per pound for a total of 780.3 million pounds. Loan receipts had totaled 122.9 million pounds or 15.7 percent of sales. Daily sales on October 10 totaled 16.3 million pounds and averaged $1.82 per pound. The amount going under loan was 10.2 percent or 1.7 million pounds.

During the first 45 days of sales last season, prices averaged $1.81 per pound with 862.7 million pounds being sold. Loan receipts during the comparable period in 1984 totaled 145.8 million pounds or 16.9 percent of sales.

The U.S. tobacco crop was estimated at 693,500 tons in a report released by USDA on October 10 and based on conditions that existed on October 1, 1985. The revised estimate is 12 percent below the 1984 crop and virtually unchanged from the September estimate. A 2 percent increase in the estimate for Tennessee was offset by a 2 percent decline in the Georgia estimate. The October report estimates production by state but not by type. The current estimates by state are shown below with the August and September estimates and 1984 production.

U.S. TOBACCO PRODUCTION
BY STATE (THOUSAND POUNDS)

STATES	1984 Prod.	1985 Estimate		
		Aug. 12	Sept. 11	Oct. 10
North Carolina	590,026	550,390	544,940	543,702

Virginia	115,897	96,765	97,128	97,128
Georgia	85,500	83,250	83,250	81,770
Maryland	30,360	24,150	27,300	27,300
Others	115,274	102,045	103,169	103,766
Total Tobacco	1,727,306	1,514,440	1,528,597	1,529,156

Notice: Customs changes import classifications for tobacco:

Effective July 1, 1985, U.S. Customs has made a further detailing of imported tobacco. Two categories were each broken into two further codes. The changes are as follows:

Old code:	170.3500	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed:
New codes:	170.3510	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed: Flue-cured:
	170.3520	Filler tobacco: When not mixed and not packed with wrapper tobacco, or when mixed or packed with 35 percent or less of wrapper tobacco: Cigarette leaf: Stemmed: not specifically provided for:
Old code:	170.8045	Tobacco, manufactured or not manufactured, not specifically provided for (other).
New codes:	170.8050	Tobacco, manufactured or not manufactured, except smoking tobacco in retail packages, flue-cured.
	170.8070	Tobacco, manufactured or not manufactured, not specifically provided for (other).

The changes have been noted in the U.S. trade summary tables that follow. The old classifications will still be retained in the tables for imports for comparison purposes.

U.S. unmanufactured tobacco exports during August 1985 were 18,145 metric tons, valued at $116.3 million, an increase of 97 percent in volume from August 1984, and up 91 percent from export levels of a month earlier. The higher exports are a result of higher exports in both flue-cured, burley and several other types. Exports for January-August 1985 were 126,631 tons, valued at $811.3 million, up 8 percent in volume, and up nearly 10 percent in value from last year.

United States exports of flue-cured tobacco were 10,796 tons, valued at $70.8 million for August, an increase of 94 percent in quantity and 105 percent in value over the August 1984 levels. Strong buying from the Federal Republic of Germany, Spain, Egypt, and Sweden helped contribute to the large jump, with each buying over 1,000 tons in August alone. Burley exports were 2,644 tons in August, almost 5 times the August 1984 depressed level of 552 tons. The value of burley exports was $20.4 million for August. Major buyers for that month were the Federal Republic of Germany, with 770 tons, and the Philippines, with 651 tons.

Unmanufactured tobacco imports for consumption (duty paid) for August 1985 were 21,396 tons, valued at $63.0 million, up 27 percent in volume from August 1984. For January-August 1985, imports for consumption were 130,175 tons, valued at

$381.0 million, up 1.5 percent in quantity, but down by just $173 thousand from last year. General imports (actual arrivals) of unmanufactured tobacco for August 1985 were 20,111 tons, valued at $52.5 million, down 10 percent in volume over August 1984. January-August general imports were 145,776 tons, valued at $399.2 million, a decline of 14 percent in volume from a year ago.

Special Report: World Tobacco Prices in 1984

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World tobacco grower prices were up in 1984, but due to the continued strengthening of the dollar were mostly lower when converted to U.S. dollar terms. Due to the economic recovery in the developed nations and throughout the world, export prices increased slightly in local currency terms. In local currency terms, the United States, Brazil, India, Malawi, Zimbabwe, Canada, and Italy registered price increases. Growers' prices were stable in Korea.

U.S. general imports of unmanufactured tobacco for the period January to September 1985 totaled 162,548 tons with a value of $435.5 million. This was down by 11 percent from last year's quantity of 181,417 tons, and off in value by 22 percent from last year's $558.3 million. For the month of September, however, shipments were up by 40 percent from September 1984, at 16,773 tons, compared to 11,990 tons last year. Value was $36.4 million for September 1985, up 17 percent over last year's $31.1 million.

U.S. unmanufactured tobacco exports during September 1985 were 18,960 metric tons, valued at $111.6 million, an increase of 5 percent in volume from September 1984, and up 4.5 percent from export levels of a month earlier. Exports for January-September 1985 were 145,591 tons, valued at $922.9 million, up 8 percent in volume, and up 9 percent in value from last year.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

NEW GREEK IMPORT MEASURES

On October 14th, the Greek government implemented new import regulations in an effort to improve their balance of payments and trade deficit. Import permits for many agricultural and nonagricultural products will now require either a 40- or 80- percent deposit of the C.I.F. value. The deposit is to be held 6 months, interest free, for use by the Greek government. For tobacco, the import deposit was set at 80 percent. Although the final impact is unclear and schedule changes are likely, retail prices of finished goods using these imported commodities will probably rise.

TURKISH CIGARETTE PRICES CONTINUE TO RISE

On October 28, 1985, the Turkish Tobacco Monopoly announced price increases on both locally produced and imported cigarettes. This is the third price increase during the 1985 calendar year. The cumulative price increase during 1985 for the two imported cigarette brands has been 45 percent for one brand and 60 percent, for the other. Cumulative 1985 increases for filter cigarettes have been between 50 and 70 percent, for non-filter cigarettes the increases have been between 53 and 112 percent. The current price of imported American cigarettes is 580 lira (approx. U.S. $1.09) per pack. Currently, the highest priced local filter cigarette is 270 lira (approx. U.S. $0.51) per pack. The increases have reduced the price spread between imported and domestic cigarettes.

UNITED KINGDOM AUGUST TRADE REPORT

The United Kingdom reported total unmanufactured tobacco imports of 11,154 metric tons in August, at a value of 18.1 million pounds, or about $25 million. Major sources were Brazil, with 4,127 tons, India with 2,166 tons, Zimbabwe with 777 tons, and Italy with 643 tons. From January to August, imports totaled 84,207 tons worth 196.5 million pounds, or around $272.0 million. Exports for August totaled 677 tons, at a value of 1.07 million pounds, or around $1.48 million. Major destinations were Italy, with 266 tons, and Cyprus with 149 tons. From January to August, exports totaled 3,984 tons, worth 5.69 million pounds, about $7.87 million.

WORLD DEVELOPMENTS AFFECTING TOBACCO SUPPLY

ZIMBABWE PRODUCTION SCALED BACK

Flue-cured tobacco production in Zimbabwe for the 1985 season has been scaled back from 121,000 metric tons, farm sales weight, to 110,900 metric tons. Reasons for the shortfall are due in part to heavy rains, and lower than anticipated prices. While exports are not anticipated to decrease substantially, ending stocks for 1985 are expected to decline from 79,396 to 70,896 metric tons. For the first 9 months of 1985, exports of flue-cured and burley tobacco totalled 63,857 tons. (See table on this page.)
The Zimbabwe Tobacco Marketing Board has agreed to accept all tenders submitted by producers for area to be planted for the coming crop year. Registrations are expected to be for over 60,000 hectares. Thus, the 1986 forecast for production is set at 135,000 tons, farm sales weight, and 118,125 tons dry weight. Exports are projected at 95,000 tons, with domestic consumption at 3,000 tons.

ZIMBABWE FINAL FLUE-CURED AUCTION REPORT, EXPORT REPORT

The Zimbabwe flue-cured auction sales were completed on October 23 after 29 weeks or 136 selling days. The auction had marketed 105,556 metric tons of tobacco at an average price of Z$2.68 per kilogram (US $0.71 per pound) during the 29 weeks. This compares with 119,636 metric tons sold at the close of last season, at an average price of Z$2.06 per kilogram (US $0.73 per pound).

Exports from January to September for all types of tobacco totaled 63,857 tons, nearly 20 percent above the 53,335 tons shipped at that time last year. The following table shows export permits issued by destination:

Destination	Metric Tons	Percent
European Community	32,951.4	48
Rest of Europe	10,030.5	15
Middle East	5,247.6	8
Far East	8,308.8	12
Africa	7,418.0	11
Oceania	1,183.4	2
North America	2,557.6	4
Total	67,717.4	100

EXCHANGE Rec'd
NOV 27 1985

Burley sales finished in September with 3,122 tons sold at an average of Z$1.84 per kilogram (US 49¢ per pound). Indications from growers and seed sales are that the 1985-86 burley crop will be around 2,000 tons.

KOREAN 1985 EXPORT AND PURCHASE SUPPORT PRICES

In the table shown below are the Republic of Korea's Office of Monopoly (OM) purchase price, and seller's price schemes for 1985:

Type	Purchase Price Won/kg.	Purchase Price ($/kg.)	Export Price $/kg.
Flue-cured			
No. 1	3,160	3.54	2.32
No. 2	2,850	3.20	2.10
No. 3	2,350	2.64	1.92
No. 4	1,660	1.86	1.41

No. 2	2,010	2.25	1.96
No. 3	1,720	1.93	1.64
No. 4	1,230	1.38	1.32
No. 5	650	0.73	0.90
Off-grade	100	0.11	N/A

Note: All prices are on farm sales weight basis. Source: Office of Monopoly. Exchange rate used here is 892 Won to the dollar.

Production forecasts for 1985 for flue-cured tobacco have been scaled back from 56,000 metric tons, farm sales weight, to 52,000 tons. This is in response to the OM's plan to reduce planted area and output targets. Reports indicate that this year's quality was good to excellent as a result of generally favorable weather during the growing and drying seasons, and to minimal disease and insect problems.

For the period January to September, Korea imported 540 tons of U.S. flue-cured tobacco, worth $3.5 million, and 300 tons of Greek oriental leaf worth $1 million. During the same time, they exported 20,154 tons worth $63.3 million. Of that amount, 10,909 tons worth $31.5 million was flue-cured, and 9,245 tons of burley worth $31.8 million. Major destinations were the Federal Republic of Germany, with 8,610 tons; the United States, with 2,180 tons; and the United Kingdom, with 2,154 tons.

U.S. TOBACCO DEVELOPMENTS

Flue-cured market report -- The 1985 gross auction sales of United States flue-cured tobacco for the marketing season that ended November 7 totaled 862,658 thousand pounds, or 391,302 metric tons, at an average price of $171.90 per hundred pounds, or $3.79 per kilogram. During the same period last year, 923,916 thousand pounds, or 419,088 metric tons were sold at an average price of $180.86 per hundred pounds or $3.99 per kilogram.

For this season, 15.3 percent of tobacco offered has gone under loan, compared with 17.2 percent last year. The season this year was 60 days, compared to 59 days last year. The table below shows gross sales, average price, loan receipts, and their percentage of sales by type and state.

Type	State	Gross Sales 1,000 pounds	Average price	Loan Receipts 1,000 pounds	Percent of sales
14	Georgia	95,387	171.24	4,599	4.8
	Florida	18,130	173.60	1,307	7.2
	Total	113,567	171.62	5,906	5.2
13	South Carolina	102,469	172.53	21,244	20.7
	North Carolina	84,704	171.78	10,856	12.8
	Total	187,173	172.19	32,100	17.1
12	North Carolina	305,487	170.43	55,387	18.1
11	Virginia	82,554	176.30	14,200	17.2
	North Carolina	173,876	172.27	24,628	14.2
	Total	256,431	173.57	38,828	15.1
Grand total		862,658	171.90	132,221	15.3

Source: USDA Agricultural Marketing Service, Tobacco Division.

On October 23, the Flue-Cured Tobacco Cooperative Stabilization Corporation had sold over 650 million pounds of the 1985 crop, meeting the first of two sales triggers that USDA had set as conditions for a rebate of 15¢ per pound on purchases of the 1985 crop. The second condition, that 125 million pounds of stocks from the 1976 to 1984 crop years be purchased from stabilization has yet to be met, with the sale beginning this month. Stabilization officials are confident that the second condition will be met. If the conditions are met, buyers will be getting over $109 million in rebates.

U.S. KRETEK IMPORTS DROP SHARPLY

Imports into the United States of kretek, or clove cigarettes have dropped sharply in 1985. Imports for consumption from Indonesia, which account for 95 percent of the import market, have decreased from 207 tons (111,056,880 pieces) during January to September 1984 to only 95 tons (45,955,200 pieces) for the same period this year. The 54-percent decrease shows no sign of abating; imports from Indonesia for the month of September amounted to only 406,400 pieces, compared to over 16,000,000 pieces in September 1984. Customs data also show no shipments during August of 1985. Clove cigarettes, which are smoked mostly by young people in the United States as an alternative to all-tobacco cigarettes, may have seen the peak of their popularity. The only other supplier of kretek to the United States currently is India, with shipments totaling over 3 million pieces from January to September.

U.S. TRADE SUMMARY

U.S. unmanufactured tobacco exports during September 1985 were 18,960 metric tons, valued at $111.6 million, an increase of 5 percent in volume from September 1984, and up 4.5 percent from a month earlier. Exports of flue-cured and several other types value up. Burley exports were down slightly. Exports for January-September 1985 were 145,591 tons, valued at $922.9 million, up 8 percent in volume, and up 9 percent in value from last year.

U.S. exports of flue-cured tobacco were 12,736 tons, valued at $76.4 million for September, an increase of 23 percent in quantity but only 9 percent in value over the September 1984 levels. Strong buying from the Federal Republic of Germany, Spain, Egypt and Iraq helped contribute to the increase, with each buying over 1,000 tons in September alone. The Federal Republic of Germany bought 1,809 tons; Spain, 1,622 tons; Egypt, 2,068 tons; and Iraq, 3,000 tons. Burley exports were 2,259 tons in September, slightly below the August export figure. The value of burley exports was $16.5 million for September. Major buyers for that month were the Federal Republic of Germany, with 513 tons, and Egypt, with 420 tons. January to September exports of burley tobacco totaled 40,186 tons, 48 percent above year earlier figures. The value of burley exports so far this year has totaled $297.5 million, up 49 percent from last year.

Unmanufactured tobacco imports for consumption (duty paid) for September 1985 were 15,373 tons, valued at $42.5 million, up less than 2 percent in volume from September 1984, and down 5 percent in value. For January-September 1985, imports for consumption were 145,548 tons, valued at $423.5 million, up 1.6 percent in quantity, but down by 1 percent in value from last year. General imports (actual arrivals) of unmanufactured tobacco for September 1985 were 16,773 tons, valued at $36.4 million, up 40 percent in volume, but up only 17 in value over September 1984. January-September general imports were 162,548 tons, valued at $435.5 million, a decline of 10 percent in volume, and 22 percent in value from a year ago. The sharp increase in this month's general imports relative to September of last year can be attributed to oriental leaf imports, which at 6,083 tons for September 1985 were nearly seven times the September 1984 figure of 924 tons.

General imports of unmanufactured tobacco for the period January to September 1985 totaled 162,548 tons with a value of $435.5 million. This is down by 11 percent from last year's quantity of 181,417 tons, and off in value by 22 percent from last year's $558.3 million. Unit value has declined to $2,679 per metric ton, off by 13 percent from last year's $3,078. Cigarette leaf accounted for most of the decline, with tonnage at 126,368 tons, compared to 148,707 last year. For the month of September, however, shipments were up by 40 percent from September 1984, at 16,773 tons, compared to 11,990 tons last year. Value was $36.4 million for September 1985, up 17 percent over last year's $31.1 million.

The 1985 exports of unmanufactured tobacco should exceed 260,000 metric tons, worth more than $1.6 billion. Imports for consumption are expected to reach 185,000 tons, with a value of $550 million. Therefore, the balance of trade surplus for unmanufactured tobacco should exceed $1 billion for calendar year 1985.

NOVEMBER 1985 COMMODITY PROGRAMS, FAS, USDA

SPECIAL REPORT: WORLD TOBACCO PRICES, 1984

SUMMARY

World tobacco grower prices were up in 1984, but due to the continued strength of the dollar were generally lower when converted to U.S. dollars. With the economic recovery in the developed nations and throughout the world, export prices increased slightly in local currency terms.

1984 flue-cured grower prices, in local currency, were up in nearly every reporting country. Prices in Canada, United States, Brazil, Zimbabwe, India and the Philippines increased by 3 percent, 1 1/2 percent, 180 percent, 9 1/2 percent, 38 percent and 81 percent respectively. No changes were recorded in Syria, Japan, West Germany and Korea.

Global burley prices in 1984 were also generally higher. Prices in the United States, Brazil, Greece, and Malawi went up by 5 1/2 percent, 180 percent, 58 percent, and 33 percent, respectively. But, in Canada, Italy and Mexico, prices declined. Prices were stable in Korea and Syria.

Oriental prices increased in most major producing countries. In Turkey, prices rose 53 percent, while prices increased 27 percent in Greece and 17 percent in Italy.

COUNTRY ANALYSIS

Flue-cured prices in the United States were up slightly in 1984, compared with a slight decrease the year earlier. The average price for flue-cured tobacco moved up in late August, September, and early October because of stronger demand for upper stalk tobacco, which carries higher support rates. Prices remained steady to slightly lower in the last few weeks of the season as lower quality tobacco from the northern areas was sold. The 1984 price support for flue-cured was frozen at the 1983 level.

Burley auction prices for 1984 averaged $1.87 a pound, about 10 cents higher than the previous year. Quality was considerably improved over the 1983 crop, which suffered from bad weather. Price support levels for 1985 were set at an average of $1.75 per pound. Price support levels for 1986 will be reduced.

Canada's flue-cured price levels are determined by the general market price established between the Ontario Flue-cured Tobacco Growers Marketing Board and the Canadian Tobacco Manufacturers' Council. In 1984, these parties agreed to a minimum price of Can$3.72 (US$2.87) per kilogram on a target production level of 77,111 tons.

In Argentina, the average flue-cured grower price for 1984 was 83.59 pesos per kilogram, in real terms far below the 1983 price. In dollar terms, this represents a slight increase since the official devaluations did not keep pace with the soaring inflation rates. The average burley grower price was 85.66 pesos per kilogram, or about $2.05. Like flue-cured growers, burley producers received far less in real terms in 1984 than in 1983. In April 1985, the price of flue-cured was set at 896 pesos per kilogram, or about $1.75 at that time. Burley prices were set at 866 pesos per kilogram, or about $1.70.

Brazil's flue-cured prices are negotiated by the Association of Tobacco Producers and the Syndicate of the Tobacco Industry. Prices for the coming crop are usually set in November, well after the crop has been planted, but prior to harvest. But as of this date, no agreement has been reached. The price increase granted in 1984 was 180 percent above the 1983 price for all types of tobacco. This was below the 210 percent rate of inflation over the same period. The prices set for 1985 are approximately 275 percent above 1984's levels. As this is a good deal above the estimated 230 percent inflation for calendar year 1984, producers were satisfied at the time the 1985 prices were set.

Italy's grower prices for the 1984 crop rose at various rates, depending on individual varieties. Only burley showed a decrease from 1983. Flue-cured prices were up nearly 9 percent.

Because of reduced production for the second consecutive year, introduction of the auction system and good demand, Indian producers received relatively good prices. The Tobacco Board anounced 1985 price supports for the top 3 grades which range from Rs 9.00 to 12.00 per kilogram for black soil tobaccos. (Exchange rate of October 1985 is Rs. 12.0332 per US $1.00.) For the irrigated northern light soil tobaccos, the price supports range from Rs. 10.50 to 15.25 per kilogram.

South Korean flue-cured purchase prices in 1984 increased by only 1 1/2 percent over 1983. The 1984 flue-cured selling price of Office of Monopoly stocks to exporters was lowered 5 percent. Burley grower prices were also raised 1 1/2 percent in 1984 over the 1983 price. For the 1985 producer and exporter price lists, please see the table on page 5.

In Turkey, private merchants -- taking into account the shortage of superior quality leaf and speculating on further devaluation of the lira against the dollar -- were again engaged in pre-market contracts with farmers. The weighted average price of the Aegean 1984 crop was 807 lira per kilogram, up 86 percent over last year's figure. In dollar terms, this is an increase of 14 percent.

The Philippine's 1984 average flue-cured price was up 28 percent from 1983 levels for Grade A tobacco. Average prices ranged from 15.99 pesos (US$0.96) for grade A to 10.39 pesos (US$0.62) per kilogram for grade E. For 1985 prices, increases ranged from 20 percent for grade A to 21.05 percent for grade E.

Zimbabwe's average flue-cured tobacco auction price was Z$2.07 (US$1.21), compared to the 1983 level of $1.88 (US$1.86) per kilogram. For the results of the 1985 flue-cured auction, see page 4.

NOVEMBER 1985 COMMODITY PROGRAMS, FAS, USDA

Do you need information about

- Overseas markets and buying trends?
- New competitors and products?
- Trade policy developments?
- Overseas promotional activities?

Then **Foreign Agriculture** — USDA's fact-filled monthly agricultural trade magazine — is for you. Based on official USDA data available nowhere else, **Foreign Agriculture** articles are clear and crisp, written to provide the export information you need, in a concise and extremely readable form.

Special information is found in **Foreign Agriculture's** telegraphed, targeted news departments: Fact File, Country Briefs, Trade Updates and Marketing News. And its tables and graphs will give you an immediate grasp of what's going on overseas.

In addition, periodic special issues—such as the one devoted entirely to value-added exports—will give you a wide range of detailed information about overseas markets.

If you use agricultural facts and figures in your business, you need **Foreign Agriculture.**

Subscribe today! Just $16.00 ($20.00 for foreign delivery) brings you Foreign Agriculture for 12 full months.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

Special Report: World Tobacco Production 17

Approved by the World Agricultural Outlook Board - USDA

SUMMARY

World unmanufactured tobacco production in 1985 is forecast at 6.8 million tons, an increase of 4 percent over the 1984 level. China's tobacco production is estimated at a record 2.3 million tons. Leaf production in the United States for 1985 is estimated at 692,618 tons, a drop of 12 percent from a year ago. World flue-cured tobacco crop in 1985 is estimated to be up 8.6 percent to 3.5 million tons, while the burley crop is forecast to be down 6.6 percent to 713,274 tons. Oriental tobacco production in 1985 is estimated at 915,433 tons, a drop of 3.9 percent from 1984.

U.S. unmanufactured tobacco exports during October 1985 decreased 29 percent from October 1984 to 22,236 tons. Cumulative leaf exports for January-October 1985 were 167,827 tons, up 1 percent from a year ago. Burley shipments increased 40 percent, while flue-cured tobacco exports dropped 7.6 percent.

U.S. unmanufactured tobacco imports for consumption during October 1985 were 13,800 tons, down 11 percent from October 1984. For January-October, imports of 159,348 tons were slightly above last year's level.

WORLD DEVELOPMENTS AFFECTING TOBACCO DEMAND

The Algerian Tobacco Monopoly, SNTA, has announced plans to upgrade its cigarette production capacity through the construction of five new cigarette manufacturing plants and the replacement of much of their existing cigarette machinery. Two factors, the increased preference for "blond" or "American" type cigarettes over the previously more popular dark cigarette, and the reduced quality of the domestically produced cigarette have forced these actions. With the rising demand for blond cigarettes, SNTA introduced two new domestic premium blond-type cigarettes in 1984 and two U.S. brands, apparently produced under license this year. Although the preference for blond cigarettes continue to grow, the monopoly currently restricts their distribution to support use of the dark cigarette.

Okinawa is the only one of Japan's 47 prefectures allowed to operate a system of duty-free shops. Nearly all of the items sold there are European luxury goods. The president of a large trading company, which is a major supplier of the shops, wants American tobacco products added to the duty-free list. Currently, tobacco products are not on the list, and are subject to duties and special taxes. If these fees were removed, American cigarettes would have about the same price as Japanese cigarettes. The result would be a wider exposure of American products and a significant increase in market share, as American cigarettes are considered superior in taste.

According to the U.S. agricultural counselor in Buenos Aires, Argentina's tobacco crop was set at over 60,000 tons, farm sales weight, a 22-percent decline from last year. Despite this drop, exports are being raised to 25,000 tons, about the same as last year. Through August 1985, exports totaled over 20,000 tons, at a value of US $38.7 million. With the lower production, higher than anticipated exports, and constant consumption, stocks are expected to drop some 15 percent from last year's levels. Argentina is a competitor with the United States in flue-cured tobacco, with exports of about one-tenth the level of the U.S.

The Dominican Republic Association of Tobacco Exporters announced on December 2, that the price paid to farmers for black tobacco in 1985-86 will increase to RD $1,653 per ton compared to average of RD $1,133 in 1984-85. The Exporter Association announced that the market for black tobacco should improve because of lower production in competing countries and the government intentions to reduce the 36-percent export tax imposed on traditional exports in February 1985.

The Dominican Republic's production of black tobacco during 1985-86 is expected to decline by 15 percent, because of the 26-percent export tax and the lack of financial resources available from the government institute of tobacco to prepare seedbeds.

Malawi's tobacco auction sales for 1985 totaled 66,909 tons valued at 128.7 million Kwachas (US$74.9 million), compared to sales of 72,679 tons valued at $145.6 million Kwachas (US$103 million) in 1984. Flue-cured tobacco sales in 1985 were 21,912 tons at an average price of 2.41 Kwachas (US$1.40) per kilogram. In 1984, flue-cured sales were 24,369 tons at an average price of 2.27 Kwachas (US$1.06) per kilogram, compared to sales in 1984 of 29,980 tons at an average price of 1.72 kwachas (US$1.221) per kilogram. Fire-cured tobacco sales in 1985 were 13,179 tons at an average price of 1.48 Kwachas (U.S.$.86) per kilogram.

Minimum export prices in Turkey for all tobacco grades for the 1985-86 marketing year were announced recently by the Treasury and Foreign Trade Undersecretariat. Except for Samsun BG and scrap, prices are the same as last year's. Along with the minimum export prices, export tax rates were announced. These taxes for tobacco were lowered substantially. Shown below are the minimum prices and export taxes by grade and type:

Grade and Type	1984 crop minimum prices U.S. dollars per kg.	New export tax rate	Old export tax

Scrap	$0.40	none	none

Yugoslavia's sharp decrease in the 1985 tobacco leaf crop will reportly increase demand for fermented tobacco imports in 1985 to an estimated 8,300 tons with (8,000 tons oriental and semi-oriental with the rest flue-cured tobacco). Exports of tobacco were already down 20 percent in January-September with 8,000 tons shipped, compared to 10,000 tons during the same period of 1984. Trade sources indicated that the total level of 1985 unmaufactured tobacco exports will reach only 14,000 tons, compared to 18,221 tons exported in 1984. The smaller exports this year are due to reduced tobacco leaf production in 1985, as well as a sharp decline in demand in both traditional Yugoslavian export markets in the west, and in the eastern European countries. This decline is expected to continue in 1986. Yugoslavia exported 4,306 tons of oriental tobacco to the United States in January-September 1985, which constitutes over 50 percent of Yugoslavia's total leaf tobacco exports during the period.

The average producer price for the 1986 tobacco crop was increased to 444.00 dinars per kilogram as opposed to 360.00 dinars paid in 1985, an increase of 23 percent. The tobacco industry expects that the 1986 tobacco leaf plantings will be increased enough to expand tobacco production during 1986 and satisfy demand. Unusually low stocks at the end of 1985 caused by the reduced 1985 tobacco leaf crop.

U.S. TOBACCO DEVELOPMENTS

U.S. Burley Tobacco Auction Update - The U.S. burley auction market opened on November 25, 1985. Through legislation the 1985 average price support level of $1.78 per pound was lowered to $1.48. Sales (gross) during the first 11 days, ending December 12, 1985, totaled 411 million pounds and averaged $1.60 per pound. Loan receipts during the same period totaled 43.2 million pounds or 10.5 percent of the total sales. During the first 11 days of last year, 369 million pounds were sold for an average price of $1.88 per pound, with 26 percent of sales going under loan.

Burley tobacco sales on December 12 totaled 27.1 million pounds at an average price of $1.59 per pound. Loan receipts were 3.7 million pounds or 13.7 percent of gross sales for that day.

The following table summarizes the markets that are currently active.

Type	1984			1985		
	1000 lbs. sold	$/lb.	% loan	1000 lbs. sold	$/lb.	% loan
Burley	369,311	1.88	26.0	411,045	1.60	10.5

U.S. TOBACCO TRADE - U.S. unmanufactured tobacco exports during October 1985 were 22,236 tons valued at $123.6 million, down 29 percent in volume from October 1984. Flue-cured exports for October were down 30 percent, while burley shipments dropped 53 percent. For January-October 1985, exports were 167,827 tons, valued at $1.05 billion, an increase of 1 percent from a year ago. Burley exports were up 40 percent for the period, while flue-cured exports were down 7.6 percent. For the first 10 months of 1985, West Germany was the leading market with 26,835 tons, followed by Spain with 16,373 tons, Japan with 12,813 tons, Egypt with 12,067 tons, and Italy with 10,833 tons.

Flue-cured tobacco exports for October 1985 were 16,079 tons, valued at $98.3 million, a decline of 30 percent from October 1984. Cumulative flue-cured exports for January-October were 91,321 tons, valued at $581.4 million, down 7.6 percent in volume from last year. Lead destinations for flue-cured tobacco exports during the January-October period were West Germany (14,070 tons), Spain (12,174 tons), Egypt (8,559 tons), Italy (5,490 tons), and Thailand (5,091 tons).

Burley tobacco exports for October 1985 were 1,089 tons, valued at $8.6 million, a drop of 53 percent from October 1984. For January-October 1985, exports were 41,274 tons, valued at $306 million, up 40 percent in volume from the same period in 1984. Leading markets for burley exports for the first 10 months of 1985 were Japan (10,220 tons), West Germany (9,201 tons), Switzerland (4,751 tons), Italy (4,043 tons), and Thailand (2,985 tons). Exports of other types (excluding flue-cured and burley) during January-October 1985 were 35,232 tons valued at $158.9 million, a drop of 7 percent in volume from a year ago. Stems, trimmings, and scraps, which accounted for 63 percent of exports of other types, were down 7 percent from last year.

Cigarette exports during October 1985 were 4.7 billion pieces, valued at $92.4 million, down 16 percent in volume from October 1984. Cumulative cigarette exports for January-October were 47.3 billion pieces, valued at

$948.8 million, an increase of 2 percent in volume from a year ago. Belgium-Luxembourg with 9.6 billion pieces was the leading market, followed by Saudi Arabia with 5.8 billion pieces, Hong Kong with 5.8 billion pieces, Japan with 5.5 billion pieces, and Singapore with 2.5 billion pieces.

Unmanufactured tobacco imports for consumption (duty paid) for October 1985 were 13,800 tons, valued $41 million, a decline of 11 percent from October 1984. Cumulative imports for January-October were 159,348 tons, valued at $464.5 million, slightly above the quantity imported during the first 10 months of 1984. Leading sources of imports were Turkey (42,102 tons), Brazil (40,525 tons), Greece (12,118 tons), Argentina (5,389 tons), and Yugosalvia (5,046 tons).

General imports (actual arrivals) of unmanufactured tobacco for October 1985 were 5,008 tons, valued at $10 million, a drop of 62 percent from October 1984. For January-October 1985, general imports were 167,556 tons, valued at $445.6 million, down 14 percent from a year ago. Leading sources of imports were Brazil (43,051 tons), Turkey (39,303 tons), Greece (14,091 tons), Italy (7,306 tons), and Canada (6,425 tons).

SPECIAL REPORT: WORLD TOBACCO PRODUCTION

World total unmanufactured tobacco production in 1985 is forecast at 6.8 million tons, 8 percent above June's estimate, but 2 percent below the record 6.9 million tons produced in 1982. Tobacco production in China, the world's largest producer, is estimated at a record 2.3 million tons. In China, all tobacco is grown on a contractual basis. Although contracts specify the amounts the government will buy, the government is the sole purchaser of tobacco. The government has attempted to control production by emphasizing quality rather than quantity, but the 20 percent discount for all above contract sales this season has not effectively curbed output. Tobacco production in the United States is estimated at 692,618 tons, slightly above June's estimate but down 12 percent from last year. Area is down 10 percent from last year as a result of lower production quotas, large carryover stocks, and lower domestic use. However, the crop benefited from favorable growing and harvesting weather.

World flue-cured tobacco production in 1985 is estimated at 3.5 million tons, up 14 percent from the June estimate. China, the world's largest flue-cured producer, accounts for the largest increase with production estimated at a record 2.0 million tons. Flue-cured tobacco continues to represent approximately 85 percent of total output in China. Production in the United States, the world's second largest producer, is also up due to favorable growing conditions and current indications are that the crop could total 356,869 tons. Production increases are also expected in Malawi, Bangladesh, Malaysia, Kenya, Zambia, Portugal, Syria, Chile, Costa Rica, and Panama. A smaller crop is forecast in Zimbabwe due to disease problems. Reduced output is also anticipated in Taiwan, Yugoslavia, Bulgaria, Nigeria, and the Federal Republic of Germany.

The 1985 world burley crop is estimated at 713,274 tons, up 4 percent from June. Output in the United States, the world's largest producer, is estimated at 274,292 tons, 2 percent above the June estimate due to higher yields. The 1985 burley tobacco area in the United States is estimated at 107,446 hectares, 16 percent below the previous year's level. The crop in Malawi is estimated at 33,600 tons, up 24 percent from the June estimate due to government efforts to maintain burley production at approximately 30,000 tons in an effort to stabilize prices. Burley prices collapsed in 1983 as the market was unable to absorb the size of the crop. Prices only partially recovered with the smaller 1984 crop. Increased output is also forecast for China based upon new information for Hubei, China's major burley producing province. The 1985 crop is now estimated at 23,900 tons, up 54 percent from June. Production increases are also expected in the Republic of Korea, Argentina, Chile, Syria, Panama, Bangladesh, and Kenya. Smaller crops are forecast for Yugoslavia, Bulgaria the Federal Republic of Germany, Portugal, Zambia, and Malaysia.

World oriental tobacco production is estimated at 915,433 tons, down 4 percent from the June estimate. Prolonged drought conditions contributed to smaller crop estimates for Bulgaria, Yugoslavia, and Romania.

World dark air/sun-cured tobacco in 1985 is estimated at 1.2 million tons, up 6 percent from June. Larger crops are expected in China, the Federal Republic of Germany, and Malawi.

World unmanufactured tobacco production for 1984 and 1985, by leaf type, is as follows in 1,000 tons:

Leaf Type	Revised 1984	Estimated 1985	
		June	Dec.
Flue-Cured	3,252	3,103	3,531

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.
